home for the first time will see vividly either beauties or incongruities which constant association has dimmed in the eyes of the steady occupants just so a fresh mind may be better able to visualize the more common processes all too familiar to me which I employ in my daily work There are in fact many details in my routine which are no less important because they are common to me and which may need some little explanation when described to others in different walks of life I have therefore asked my associates whose new viewpoint should enable them to observe these details in clear perspective to present in this the first volume a survey of the working methods employed so that the reader may in the first few chapters be brought to the point where he and I may go out into the fields together and work among our plants with perfect understanding Luther Burbank Santa Rosa California January 7 1914 Some of the chapters are How the Cactus Got Its Spines And How It Lost Them The Rivalry of Plants to Please Us How Far Can Plant Improvement Go and many more Luther Burbank 1849 1926 was an American horticulturist botanist and pioneer plant breeder who developed more than 200 new varieties of plants for which he was recognized by an Act of Congress among many other honors Burbank was born in Lancaster Massachusetts and was educated at local schools and at Lancaster Academy His boyhood was spent on a farm and at the age of 21 he purchased a plot of land near Lunenburg Massachusetts and began his lifework of plant breeding In 1873 he developed the so called Burbank potato a large hardy variety of potato considered much superior to the small easily spoiled type then grown In 1875 Burbank moved to Santa Rosa California and established a nursery garden and a greenhouse that were the site of his experiments for the next 50 years There he developed the edible thornless Opuntia cactus several improved varieties of fruits and vegetables several new strains of roses and many other ornamental and decorative flowers and plants and a new fruit called the plumcot which is a cross between the plum and the apricot At the time of his death he had more than 3000 experiments under way and was growing more than 5000 distinct botanical species native to many parts of the world His work stimulated worldwide interest in plant breeding Burbank's primary concern was

the development of new varieties of plants His ability to perform experiments that produced plants with favorable characteristics depended more on his sense of intuition than on strict scientific methodology However Burbank was influenced by certain scientific theories such as the formerly accepted theory of the inheritance of acquired characteristics affirmed by Jean de Lamarck and others Burbank s writings include Luther Burbank His Methods and Discoveries 12 vol 1914 15 and How Plants Are Trained to Work for Man 8 vol 1921 This set was prepared from the author s original field notes covering more than 100 000 experiments made during forty years devoted to plant improvement **Luther Burbank** John Whitson,Robert John,Luther Burbank Society,2018-10-11 This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public To ensure a quality reading experience this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy to read typeface We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant
