Machiavellian Intelligence II Extensions And Evaluations:

Machiavellian Intelligence II Andrew Whiten, Richard W. Byrne, 1997-09-25 This book aims to explain the intelligence of monkeys and apes and the huge brain expansion that marked human evolution In 1988 Machiavellian Intelligence was the first book to assemble the early evidence suggesting a new answer that the evolution of intellect was primarily driven by selection for manipulative social expertise within groups where the most challenging problem faced by individuals was dealing with their companions Since then a wealth of new information and ideas has accumulated This new book will bring readers up to date with the most important developments extending the scope of the original ideas and evaluating them empirically from different perspectives It is essential reading for researchers and students in many different branches of evolution and behavioral sciences primatology and philosophy

Machiavellian Intelligence II Andrew Whiten, Richard W. Byrne, 1997-09-25 Extends and evaluates the Machiavellian Intelligence Hypothesis for intelligence's social basis The Evolution of Thought Anne E. Russon, David R. Begun, 2007-07-23 Research on the evolution of higher intelligence rarely combines data from fields as diverse as paleontology and psychology In this volume we seek to do just that synthesizing the approaches of hominoid cognition psychology language studies ecology evolution paleoecology and systematics toward an understanding of great ape intelligence Leading scholars from all these fields have been asked to evaluate the manner in which each of their topics of research inform our understanding of the evolution of intelligence in great apes and humans The ideas thus assembled represent a comprehensive survey of the various causes and consequences of cognitive evolution in great apes The Evolution of Thought will therefore be an essential reference for graduate students and researchers in evolutionary psychology paleoanthropology and primatology

Social Intelligence Nathan Emery, Nicola Clayton, Christopher D. Frith, 2008 Why are humans so clever The Social intelligence hypothesis explores the idea that this cleverness has evolved through the increasing complexity of social groups Our ability to understand and control nature is a by product of our ability to understand the mental states of others and to use this knowledge to co operate or deceive These abilities have not emerged out of the blue They can be found in many social animals that co operate and compete with one another birds as well as mammals This book brings together contributions from an impressive list of authorities in the field appropriately concluding with a chapter by Nick Humphrey one of the pioneers in this field This volume examines social intelligence in many different animal species and explores its development evolution and the brain systems upon which it depends Better understanding and further development of social intelligence is critical for the future of the human race and the world that we inhabit Our problems will not be solved by mere cleverness but by increased social co operation

Public Relations and Whistleblowing Cary A. Greenwood, 2021-09-28 There is a growing interest in corporate whistleblowing but no comprehensive research has yet focused on public relations practice Drawing on extensive research on Fortune 1000 and Wilshire 5000 corporations this book reveals executives attitudes and relationships toward their organizations and their

impact on whistleblowing Perhaps unsurprisingly it reveals that wrongdoing in corporations and the privileges of power coexist Top ranking public relations executives who are mostly white and male are more likely to be aware of wrongdoing but no more likely to blow the whistle fundamentally due to their positive relationship with their employers Using the new lens of evolutionary theory this study explains whistleblowing retaliation and relationships and in the light of the connection between whistleblowing behavior and executives attitudes it proposes a new theory of the phenomenon of Golden Handcuffs As public attitudes to corporations corporate social responsibility CSR and transparency harden these findings have serious implications for companies globally Researchers scholars and advanced students in public relations organizational communication corporate communication strategic communication corporate reputation and CSR will find this book full of revealing insights

Machiavelliana Michael Jackson, Damian Grace, 2018-06-05 In *Machiavelliana* Michael Jackson and Damian Grace offer a comprehensive study of the uses and abuses of Niccol Machiavelli's name in society generally and in academic fields distant from his intellectual origins It assesses the appropriation of Machiavelli in didactic works in management social psychology and primatology scholarly texts in leaderships studies as well as novels plays commercial enterprises television dramas operas rap music Mach IV scales children's books and more The book audits surveys examines and evaluates this Machiavelliana against wider claims about Machiavelli It explains the origins of Machiavelli's reputation and the spread of his fame as the foundation for the many uses and misuses of his name They conclude by redressing the most persistent distortions of Machiavelli

Evolution and the Social Mind Joseph P. Forgas, Martie G. Haselton, William von Hippel, 2011-03-15 This book seeks to combine the study of human social cognition the way we think decide plan and analyze social situations with an evolutionary framework that considers these activities in light of evolutionary adaptations for solving problems of survival faced by our ancestors over thousands of generations The chapters report recent research and theories illustrating how evolutionary principles can shed new light on the subtle and often subconscious ways that cognitive mechanisms guide people's thoughts memories judgments attitudes and behaviors in social life The contributors to this volume who are leading researchers in their fields seek answers to such intriguing questions as how can evolutionary principles help to explain human beliefs attitudes judgments prejudice and group preferences Are there benefits to behaving unpredictably Why are prototypical faces more attractive than atypical ones How do men and women think about and select potential mates What are the adaptive functions of negative affect What are the evolutionary influences on the way people think about and respond to social exclusion and ostracism *Evolution and the Social Mind* offers a highly integrated and representative coverage of this emerging field and is suitable as a textbook in advanced courses dealing with social cognition and evolutionary psychology

The Behavior, Ecology and Evolution of Cichlid Fishes Maria E. Abate, David L.G. Noakes, 2021-09-19 This volume constitutes the most recent and most comprehensive consideration of the largest family of bony fishes the Cichlidae This book offers an integrated perspective of cichlid fishes ranging from conservation of threatened

species to management of cichlids as invasive species themselves Long standing models of taxonomy and systematics are subjected to the most recent applications and interpretations of molecular evidence and multivariate analyses and cichlid adaptive radiations at different scales are elucidated The incredible diversity of endemic cichlid species in African lakes is revisited as possible examples of sympatric speciation and as serious cases for management in complex anthropogenic environments Extreme hydrology and bathymetry as driver of micro allopatric speciation is explored in the African riverine hotspot of diversity of the lower Congo River Dramatic new molecular evidence draws attention to the complex taxonomy and systematics of Neotropical cichlids including the crater lakes of Central America Molecular genetics genomics imaging tools and field study techniques assess the roles of natural sexual and kin selection in shaping cichlid traits and beyond The complex behavioral adaptations of cichlids are considered from a number of sub disciplines including sensory biology neurobiology development and evolutionary ecology Most importantly this volume puts forth a wealth of new interpretations explanatory hypotheses and proposals for practical management and applications that will shape the future for these remarkable fishes in nature as well as their use as models for the study of biology

The Mind of the Chimpanzee Elizabeth V. Lonsdorf, Stephen R. Ross, Tetsuro Matsuzawa, 2010-08-15 Understanding the chimpanzee mind is akin to opening a window onto human consciousness Many of our complex cognitive processes have origins that can be seen in the way that chimpanzees think learn and behave The Mind of the Chimpanzee brings together scores of prominent scientists from around the world to share the most recent research into what goes on inside the mind of our closest living relative Intertwining a range of topics including imitation tool use face recognition culture cooperation and reconciliation with critical commentaries on conservation and welfare the collection aims to understand how chimpanzees learn think and feel so that researchers can not only gain insight into the origins of human cognition but also crystallize collective efforts to protect wild chimpanzee populations and ensure appropriate care in captive settings With a breadth of material on cognition and culture from the lab and the field The Mind of the Chimpanzee is a first rate synthesis of contemporary studies of these fascinating mammals that will appeal to all those interested in animal minds and what we can learn from them

Machiavelli's Florentine Republic Michelle T. Clarke, 2018-03-08 What do modern republics have to fear Machiavelli's Florentine Republic reconstructs Machiavelli's answer to this question from the perspective of the Florentine Histories his most probing meditation on the fate of republican politics in the modern age It argues that his principle goal in narrating the defeat of Florentine republicanism is to debunk the views of leading humanists concerning the overall health of republican politics in modernity and the distinctive challenges that modern republics should expect to face The Medici family had exposed these vulnerabilities better than anyone else and Machiavelli reconstructs their political strategy to show how conventional ideas of moral and political virtue are the most potent instruments of princely ambition in a city that wants to be free

Culture Evolves Andrew Whiten, 2012 Culture broadly defined as all we learn from others that endures for long enough to generate customs and traditions shapes

vast swathes of our lives and has allowed the human species to dominate the planet in an evolutionarily unique way Culture and cultural evolution are uniquely significant phenomena in evolutionary biology they are products of biological evolution yet they supplement genetic transmission with social transmission thus achieving a certain independence from natural selection However cultural evolution nevertheless expresses key Darwinian processes itself and also interacts with genetic evolution Just how culture fits into the grander framework of evolution is a big issue though yet one that has received relatively little scientific attention compared to for example genetic evolution Our capacity for culture appears so distinctive among animals that it is often thought to separate we cultural beings from the rest of nature and the Darwinian forces that shape it Culture Evolves presents a different view arising from the recent discoveries of a diverse range of disciplines that focus on evolutionary continuities First recent studies reveal that learning from others and the transmission of traditions are more widespread and significant across the animal kingdom than earlier recognized helping us understand the evolutionary roots of culture Second archaeological discoveries have pushed back the origins of human culture to much more ancient times than traditionally thought These developments together suggest important continuities between animal and human culture A third new array of discoveries concerns the later diversification of human cultures where the operations of Darwinian like cultural evolutionary processes are increasingly identified Finally surprising discoveries have been made about the imprint of cultural evolution in children s predisposition to acquire culture The result of a major interdisciplinary meeting held by the Royal Society and the British Academy this book presents the work of leading experts from the fields of ethology behavioural ecology primatology comparative psychology archaeology anthropology evolutionary biology and developmental psychology

Virtue as Social Intelligence Nancy E. Snow, 2010-07-29 Virtue as Social Intelligence An Empirically Grounded Theory takes on the claims of philosophical situationism the ethical theory that is skeptical about the possibility of human virtue Influenced by social psychological studies philosophical situationists argue that human personality is too fluid and fragmented to support a stable set of virtues They claim that virtue cannot be grounded in empirical psychology This book argues otherwise Drawing on the work of psychologists Walter Mischel and Yuichi Shoda Nancy E. Snow argues that the social psychological experiments that philosophical situationists rely on look at the wrong kinds of situations to test for behavioral consistency Rather than looking at situations that are objectively similar researchers need to compare situations that have similar meanings for the subject When this is done subjects exhibit behavioral consistencies that warrant the attribution of enduring traits and virtues are a subset of these traits Virtue can therefore be empirically grounded and virtue ethics has nothing to fear from philosophical situationism

The Evolution of Cognition Cecilia M. Heyes, Ludwig Huber, 2000 In the last decade evolutionary psychology has come to refer exclusively to research on human mentality and behavior motivated by a nativist interpretation of how evolution operates This book encompasses the behavior and mentality of nonhuman as well as human animals and a full range of evolutionary approaches Rather than a collection by

and for the like minded it is a debate about how evolutionary processes have shaped cognition The debate is divided into five sections Orientations on the phylogenetic ecological and psychological comparative approaches to the evolution of cognition Categorization on how various animals parse their environments how they represent objects and events and the relations among them Causality on whether and in what ways nonhuman animals represent cause and effect relationships Consciousness on whether it makes sense to talk about the evolution of consciousness and whether the phenomenon can be investigated empirically in nonhuman animals and Culture on the cognitive requirements for nongenetic transmission of information and the evolutionary consequences of such cultural exchange Contributors Bernard Balleine Patrick Bateson Michael J Beran M E Bitterman Robert Boyd Nicola Clayton Juan Delius Anthony Dickinson Robin Dunbar D P Griffiths Bernd Heinrich Cecilia Heyes William A Hillix Ludwig Huber Nicholas Humphrey Masako Jitsumori Louis Lefebvre Nicholas Mackintosh Euan M Macphail Peter Richerson Duane M Rumbaugh Sara Shettleworth Martina Siemann Kim Sterelny Michael Tomasello Laura Weiser Alexandra Wells Carolyn Wilczynski David Sloan Wilson

Many Layers of Ecocentrism Abhik Gupta, 2024-06-17 This book unveils the myriad streams of ecocentric thoughts that have been flowing through the human mind in indigenous communities in the wisdom of philosophers in the creative expressions of poets and writers sometimes latent but sometimes more explicit The strength of this book lies in the fact that it attempts to show that ecocentrism had not emerged suddenly as a distinct line of philosophical thought or found its place among the various normative approaches toward nature but the seeds of ecocentrism had always been running through human societies Thus this book not only emphasizes the unity of life but also reveals the inherent unity of all hues of ecocentrism The book adopts a multidisciplinary approach which is essential to dwell on a topic like ecocentrism which permeates the domains of disciplines as disparate as science philosophy religion normative ethics myths and folklore poetry and literature among others Despite this eclectic approach the book attempts to maintain continuity among the chapters and present these concepts in a simple form that will be easily accessible by readers from all conceivable backgrounds This book would be useful to the students researchers and

faculty from the fields of ecology and environmental science philosophy sociology religious studies and literature It will also be an indispensable companion for all nature lovers activists and general readers interested in the emergence and evolution of environmental thoughts **Evolution's Empress** Maryanne L. Chang,2013-01-30 Over the last decade there has been increasing debate as to whether feminism and evolutionary psychology can co exist Such debates often conclude with a resounding no often on the grounds that the former is a political movement while the latter is a field of scientific inquiry In the midst of these debates there has been growing dissatisfaction within the field of evolutionary psychology about the way the discipline and others have repeatedly shown women to be in passive roles when it comes to survival and reproduction Evolutionary behavioral research has made significant strides in the past few decades but continues to take for granted many theoretical assumption that are perhaps in light of the most recent evidence misguided As a result the research community has missed important areas of research and in some cases will likely come to inaccurate conclusions based on existing dogma rather than rigorous theoretically driven research Bias in the field of evolutionary psychology echoes the complaints against the political movement attached to academic feminisms This is an intellectual squabble where much is at stake including a fundamental understanding of the evolutionary significance of women s roles in culture mothering reproductive health and physiology mating female alliances female aggression and female intrasexual competition Evolution s Empress identifies women as active agents within the evolutionary process The chapters in this volume focus on topics as diverse as female social interactions mate competition and mating strategies motherhood women s health sex differences in communication and motivation sex discrimination and women in literature The volume editors bring together a diverse range of perspectives to demonstrate ways in which evolutionary approaches to human behavior have thus far been too limited By reconsidering the role of women in evolution this volume furthers the goal of generating dialogue between the realms of women s studies and evolutionary psychology Transcendental Medication

Christopher D. Lynn,2022-04-28 Transcendental Medication considers why human brains evolved to have consciousness yet we spend much of our time trying to reduce our awareness It outlines how limiting consciousness rather than expanding it is more functional and satisfying for most people most of the time The suggestion is that our brains evolved mechanisms to deal with the stress of awareness in concert with awareness itself otherwise it is too costly to handle Defining dissociation as partitioning of awareness Lynn touches on disparate cultural and psychological practices such as religion drug use 12 step programs and dancing The chapters draw on biological and cultural studies of Pentecostal speaking in tongues and stress the results of our 800 000 years watching hearth and campfires and unconscious uses of self deception as mating strategy Written in a highly engaging style Transcendental Medication will appeal to students and scholars interested in mind altered states of consciousness and evolution It is particularly suitable for those approaching the issue from cultural biological psychological and cognitive anthropology as well as evolutionary psychology cognitive neuroscience and religious studies
