Machine Intelligence 13 K. Furukawa, D. Michie, S. Muggleton, 1994-08-25 BL Leaders in the discipline discuss the latest developments in a fast moving field This book is the latest volume in a successful series the result of a fruitful collaboration between the Turing Institute and the Japan Society for Artificial Intelligence This volume stems from a workshop held in 1992 which not only witnessed the series enter its second quarter century but also a new phase in its development The pages of this book show that machine learning has emerged to declare itself as a seed bed of new theory as a practical tool in engineering disciplines and as a material for new mental models in human sciences **Structure-Based Drug Design** P.W.

Codding, 2013-04-17 Structure Based Drug Design brings together scientists working on different aspects of the subject demonstrating the necessary collaboration and interdisciplinary approach to this complex area The focus is on X ray crystallographic and computational approaches The general aspects of these approaches are introduced in the first six articles The remaining articles provide examples of the application of X ray crystallography molecular modelling molecular dynamics QSAR database analysis and homology modelling The papers cover a wealth of interesting problems in the design of new and enhanced pharmaceuticals **PRICAI 2000 Topics in Artificial Intelligence** Riichiro Mizoguchi, John

Slaney, 2007-12-07 PRICAI 2000 held in Melbourne Australia is the sixth Pacific Rim International Conference on Artificial Intelligence and is the successor to the five earlier PRICAIs held in Nagoya Japan Seoul Korea Beijing China Cairns Australia and Singapore in the years 1990 1992 1994 1996 and 1998 respectively PRICAI is the leading conference in the Pacific Rim region for the presentation of research in Artificial Intelligence including its applications to problems of social and economic importance The objectives of PRICAI are To provide a forum for the introduction and discussion of new research results concepts and technologies To provide practising engineers with exposure to and an evaluation of evolving research tools and practices To provide the research community with exposure to the problems of practical applications of AI and To encourage the exchange of AI technologies and experience within the Pacific Rim countries PRICAI 2000 is a memorial event in the sense that it is the last one in the 20 century It reflects what researchers in this region believe to be promising for their future AI research activities In fact some salient features can be seen in the papers accepted We have 12 papers on agents while PRICAI 96 and 98 had no more than two or three This suggests to us one of the directions in which AI research is going in the next century It is true that agent research provides us with a wide range of research subjects from basic ones to applications **Machine Intelligence 15** Koichi Furukawa, Kōichi Furukawa, Donald Michie, Stephen Muggleton, 1999

Scientific Data Mining and Knowledge Discovery Mohamed Medhat Gaber, 2009-09-19 Mohamed Medhat Gaber It is not my aim to surprise or shock you but the simplest way I can summarise is to say that there are now in the world machines that think that learn and that create Moreover their ability to do these things is going to increase rapidly until in a visible future the range of problems they can handle will be coextensive with the range to which the human mind has been applied by Herbert A Simon 1916 2001 1 Overview This book suits both graduate students and researchers with a focus on discovering knowledge from scientific data The use of computational power for data analysis and knowledge discovery in scientific disciplines has found its roots with the revolution of high performance computing systems Computational science in physics chemistry and biology represents the first step towards automation of data analysis tasks The rationale behind the development of computational science in different areas was automating mathematical operations performed in those areas There was no attention paid to the scientific discovery process Automated Scientific Discovery ASD 1 3 represents the second natural step ASD attempted to automate the process of theory discovery supported by studies in philosophy of science and cognitive sciences Although early research articles have shown great successes the area has not evolved due to many reasons The most important reason was the lack of interaction between scientists and the automating systems
