ARTIFICIAL INTELLIGENCE FOR MECHANICAL ENGINEERING Dr. S. SATHEESH KUMAR, Dr. R. MUTHALAGU, Dr. BHARATH V, Dr. ANNAPOORNA K, The 21st century has ushered in a technological renaissance with Artificial Intelligence AI standing at the forefront as a catalyst for innovation and transformation across every sphere of engineering Once confined to the realm of computer science AI has now firmly embedded itself in the domain of mechanical engineering redefining how machines are designed manufactured operated and

maintained This book Artificial Intelligence for Mechanical Engineering is an endeavor to bridge the gap between classical mechanical principles and modern computational intelligence offering students researchers and industry professionals a comprehensive guide to harnessing AI in this dynamic field Mechanical engineering traditionally grounded in deterministic models and empirical testing is witnessing an unprecedented shift toward data driven adaptive and autonomous systems Whether it is predictive maintenance in industrial plants generative design in product development AI enhanced computational simulations or intelligent robotics in manufacturing the integration of AI has opened new horizons for efficiency precision and innovation This transformation is not merely technological it is philosophical altering the way engineers perceive problems and conceive solutions The impetus for writing this book arose from a recognition that while AI tools are rapidly advancing their practical adoption in mechanical engineering requires both technical understanding and domain specific adaptation Many existing resources either focus heavily on AI theory without contextual application or on mechanical engineering without adequately exploring AI s potential Our goal is to synthesize these perspectives presenting AI concepts with clarity grounding them in engineering fundamentals and illustrating their use through real world case studies

Information Technologies Carl F. Hostetter,1995 *Autonomy and Artificial Intelligence: A Threat or Savior?* W.F. Lawless,Ranjeev Mittu,Donald Sofge,Stephen Russell,2017-08-24 This book explores how Artificial Intelligence AI by leading to an increase in the autonomy of machines and robots is offering opportunities for an expanded but uncertain impact on society by humans machines and robots To help readers better understand the relationships between AI autonomy humans and machines that will help society reduce human errors in the use of advanced technologies e g airplanes trains cars this edited volume presents a wide selection of the underlying theories computational models experimental methods and field applications While other literature deals with these topics individually this book unifies the fields of autonomy and AI framing them in the broader context of effective integration for human autonomous machine and robotic systems The contributions written by world class researchers and scientists elaborate on key research topics at the heart of effective human machine robot systems integration These topics include for example computational support for intelligence analyses the challenge of verifying today s and future autonomous systems comparisons between today s machines and autism implications of human information interaction on artificial intelligence and errors systems that reason the autonomy of machines robots buildings and hybrid teams where hybrid reflects arbitrary combinations of humans machines and robots The contributors span the field of autonomous systems research ranging from industry and academia to government Given the broad diversity of the research in this book the editors strove to thoroughly examine the challenges and trends of systems that implement and exhibit AI the social implications of present and future systems made autonomous with AI systems with AI seeking to develop trusted relationships among humans machines and robots and the effective human systems integration that must result for

trust in these new systems and their applications to increase and to be sustained

High-Reliability Autonomous

Management Systems for Spacecraft

Jianjun Zhang, Jing Li, 2023-08-22 This book examines the autonomous management of spacecraft which uses modern control technologies such as artificial intelligence to establish a remote intelligent body on the spacecraft so that the spacecraft can complete its flight tasks by itself Its goal is to accurately perceive its own state and external environment without relying on external information injection and control or rely on external control as little as possible make various appropriate decisions based on this information and user tasks and be able to autonomously control spacecraft to complete various tasks Divides the autonomous management level of spacecraft into two levels Basic autonomy to meet spacecraft health requirements namely autonomous health management and autonomy of the advanced stage Divides the implementation of spacecraft autonomous management into three aspects Autonomous health management of spacecraft the spacecraft can monitor and sense its own state and can autonomously detect isolate and recover from faults Autonomous mission management the spacecraft can directly receive the mission formulate a reasonable plan according to the current state and working environment of the spacecraft and convert the mission into a specific sequence of instructions Spacecraft autonomous data management the spacecraft processes a large amount of raw data and extracts useful information and autonomously executes or changes flight tasks The autonomous management model of the spacecraft is divided into two points Compatibility the existing traditional control systems belong to the execution layer logic and are compatible with the existing systems Scalability it adopts a layered structure and each layer has different autonomous capabilities
