Summary of Ron Ritchhart, Mark Church & Karin Morrison's Making Thinking Visible Everest Media, 2022-05-07T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 The word think is used frequently in classrooms However teachers have never considered what they want their students to do mentally when they hear the word think 2 The thinking

required in teachers lessons is often identified using Bloom s taxonomy which focuses on three domains affective psychomotor and cognitive However the idea that thinking is sequential or hierarchical is problematic In reality there is a constant back and forth between ways of thinking that interact to produce learning 3 The idea of levels of thinking is meaningless when considered in isolation It makes more sense to consider the levels or quality within a single type of thinking For instance one can describe a situation at a high and detailed level or a superficial level 4 The idea of levels of thinking is problematic when it comes to parsing thinking Thinking does not happen in a lockstep sequential manner It is much messier complex and interconnected than that

The Thinking Machine Charles Judson Herrick,1929 This is a book about the natural history of human nature It is not a book about philosophy for philosophers It is a plain and straightforward statement for ordinary people of what another very ordinary sort of man who has considerable experience with the mechanisms of human life and how they work thinks about it all We all want to understand human nature better because it is our nature The better we understand it the more likely we are to get along with ourselves our neighbors and our surroundings in general We want to make life more worth while to get as much out of it as we can and to put as much into it as we can to make a better living and to have as much fun doing it as possible We need to know how we live what the apparatus of life is and how it works in order to make a better job of it Preface
