Making Things Happen A Theory Of Causal Explanation:

Making Things Happen James Woodward, 2005-10-27 Woodward's long awaited book is an attempt to construct a comprehensive account of causation explanation that applies to a wide variety of causal and explanatory claims in different areas of science and everyday life. The book engages some of the relevant literature from other disciplines as Woodward weaves together examples counterexamples criticisms defenses objections and replies into a convincing defense of the core of his theory which is that we can analyze causation by appeal to the notion of manipulation.

Making Things Happen James Woodward, 2005-10-27 In *Making Things Happen* James Woodward develops a new and ambitious comprehensive theory of causation and explanation that draws on literature from a variety of disciplines and which applies to a wide variety of claims in science and everyday life. His theory is a manipulationist account proposing that causal and explanatory relationships are relationships that are potentially exploitable for purposes of manipulation and control. This account has its roots in the commonsense idea that causes are means for bringing about effects but it also draws on a long tradition of work in experimental design econometrics and statistics. Woodward shows how these ideas may be generalized to other areas of science from the social scientific and biomedical contexts for which they were originally designed. He also provides philosophical foundations for the manipulationist approach drawing out its implications comparing it with alternative approaches and defending it from common criticisms. In doing so he shows how the manipulationist account both illuminates important features of successful causal explanation in the natural and social sciences and avoids the counterexamples and difficulties that infect alternative approaches from the deductive nomological model onwards. *Making Things Happen* will interest philosophers working in the philosophy of science the philosophy of social science and metaphysics and as well as anyone interested in causation explanation and scientific methodology.

Causality and Causal Explanation in Aristotle Nathanael Stein, 2023 We spend a lot of time looking for explanations and arguing about them especially causal explanations of phenomena large and small. But what makes for good causal explanations and how do we tell them apart from bad ones? This book aims to think through these philosophical issues by re-examining Aristotle's theory of causal explanation which is one of the oldest and most influential. Nathanael Stein drops many common assumptions and brings together ideas that are normally discussed in isolation with the aim of answering the philosophical questions that have perplexed Aristotle's readers.

Scientific Practice Marta Bertolaso, 2015-10-06 Focusing on cell dynamics molecular medicine and robotics contributors explore the interplay between biological technological and theoretical ways of thinking The collection makes a strong contribution to current debates in the philosophy of science and the changing role of scientific practice

Causality in the Sciences Phyllis Illari, Federica Russo, Jon Williamson, 2011-03-17 There is a need for integrated thinking about causality probability and mechanisms in scientific methodology Causality and probability are long established central concepts in the sciences with a corresponding philosophical literature examining their problems On the other hand the philosophical literature examining mechanisms is not long established and there is no clear idea of how mechanisms relate to causality and probability But we need some idea if we are to understand causal inference in the sciences a panoply of disciplines ranging from epidemiology to biology from econometrics to physics routinely make use of probability statistics theory and mechanisms to infer causal relationships These disciplines have developed very different methods where causality and probability often seem to have different understandings and where the mechanisms involved often look very different This variegated situation raises the question of whether the different sciences are really using different concepts or whether progress in understanding the tools of causal inference in some sciences can lead to progress in other sciences The book tackles these questions as well as others concerning the use of causality in the sciences

The Volitional Theory of Causation W. J. Mander, 2023-01-10 This book presents a history of the volitional theory of causation the philosophical proposal that volition or will of the same or broadly the same stamp as that which we experience in our own deliberate and voluntary doings should be taken as the basis for all causality Few today know much about the volitional theory of causation and even fewer have given it any serious attention But if current opinion regards this suggestion as an unusual one of minor importance the historical record shows otherwise revealing that it is a theory which has been proposed and developed again and again throughout the modern era Its obscurity is only a recent phenomenon Starting at the beginning of the Early Modern period and progressing right up the modern times the historical discussion takes in both supporters and critics as well as both famous and less well known figures to tell the story of a long running debate which contemporary history of philosophy has forgotten The principal figures discussed are Berkeley Hume Reid Maine de Biran Schopenhauer Mansel Mill Martineau Alexander Campbell Fraser Borden Parker Bowne and G F Stout although many other philosophers are also considered The book ends with a consider of the philosophical merits of the theory

An Introduction to Criminological Theory and the Problem of Causation Jason Warr, 2017-01-24 This text offers a novel contribution to the literature on core criminological theory by introducing the complex issues relating to the structuring and analysing of causation This text traces the paradigm shift or drift that has occurred in the history of criminology and shows how the problem of causation has been a leading factor in these theoretical developments This short book is the first of its kind and is an introductory text designed to introduce both seasoned criminologists as well as students of criminology to the interesting intersections between the fields of criminology and the philosophy of the social sciences The problem of causation is notoriously difficult and has plagued philosophers and scientists for centuries Warr highlights the importance of grappling with this problem and demonstrates how it can lead to unsuccessful theorising and can prevent students from fully appreciating the development of thinking in criminology This accessible account will prove to be a must read for scholars of criminal justice penology and philosophy of social science

Towards a Theory of Thinking Britt Glatzeder, Vinod Goel, Albrecht Müller, 2010-03-20 What is Thinking Trying to Define an Equally Fascinating and Elusive Phenomenon Human thinking is probably the most complex phenomenon that evolution has come up with until now There exists a broad spectrum of definitions from subsuming almost all processes of cognition to limiting it to language based sometimes even only to formalizable reasoning processes We work with a medium sized definition according to which thinking encompasses all operations by which cognitive agents link mental content in order to gain new insights or perspectives Mental content is thus a prerequisite for and the substrate on which thinking operations are executed The largely unconscious acts of perceptual object stabilization categorization emotional evaluation and retrieving all the above from memory inscriptions are the processes by which mental content is generated and are therefore seen as prerequisites for thinking operations In terms of a differentia specifica the notion of thinking is seen as narrower than the notion of cognition and as wider than the notion of reasoning Thinking is thus seen as a subset of cognition processes and reasoning processes are seen as a subset of thinking Besides reasoning the notion of thinking includes also nonexplicit intuitive and associative processes of linking mental content According to this definition thinking is not dependant on language i.e. also many animals and certainly all mammals show early forms of thinking

The Intelligent Design Debate and the Temptation of Scientism

Erkki Vesa Rope Kojonen,2016-04-28 The controversy over Intelligent Design ID has now continued for over two decades with no signs of ending For its defenders ID is revolutionary new science and its opposition is merely ideological For its critics ID is both bad science and bad theology But the polemical nature of the debate makes it difficult to understand the nature of the arguments on all sides A balanced and deep analysis of a controversial debate this volume argues that beliefs about the purposiveness or non purposiveness of nature should not be based merely on science Rather the philosophical and theological nature of such questions should be openly acknowledged

Normativity and Naturalism in the Philosophy of the Social Sciences
