Baqri, 2005-05-01 Changing Faunal Ecology in the Thar Desert dedicated to the fond memory of Professor Dr Ishwar Prakash the legendary rodentologist is a unique mlang of scientific investigations on diversified ecological subjects pertaining to different organism groups from as tiny as protozoa to as giant as mammals Altogether sixteen contributions including an original up to date and authentic bio bibliography of Dr I Prakash make this volume an exceptional treatise penned by 24 expert scientist authors many of whom have spent a life in arid ecosystems including the Thar Desert The book provides a crystal clear proof of the constantly changing behavioural ecology of animals in the Thar Desert which has been under an ever increasing impact of among several imminent factors the Indira Gandhi Nahar Pariyojana IGNP one of the worlds largest irrigation systems of its type in a xeric environment The change is discernible not only in structure and distribution of animals but in their resting feeding breeding and as evident in case of parasites the extent of parasitism as well as pathogenecity Finally this book offers the first well documented evidence of immense behavioral transformation in various different animal groups in the Tharp Desert a phenomenon of enormous significance for both conservation management and diversity inventorization activities of its faunal wealth

Medical Entomology B.K. Tyagi, 2003-01-01 Medical Entomology has in course of time undergone a transformation from a mere traditional knowledge of the discipline to the one that stresses emphatically on harvesting a plethora of insects infinite biomedical properties Our familiarity with the medically important

insects and other arthropods has therefore been expanded in this book to explore unlimited biomedical significance of these tiny yet most successful creatures on earth with about four million species In addition to having a first hand information on the pestilent vectorial importance of arthropods particularly various vector borne infections an ingenious attempt has been made to unveil their medicinal value in different contexts Having au fait with the fact that environment plays a key role in regulating disease epidemiology of a given vector borne infection adequate emphasis is laid to trace the various pathways governing the linkages amongst the vector pathogen host triad The book offers a detailed account of various poisonous and injurious arthropods along with the venoms action on the human being The book should hopefully serve a good purpose to both the students of zoology and medicine as well as professional researchers *Mosquitoes of India* B.K. Tyagi,2025-03-28

This is an up to date and comprehensive handbook that presents a wealth of information on the different aspects of one of the largest dipterous family Culicidae Mosquitoes India shares more than ten percent of the global mosquito fauna and this book provides an extensive inventory of extant taxa along with a detailed description of the key identification features of medically important mosquitoes This book illustrates updated information on insecticide based mechanisms of resistance development in vectors and showcases varied host parasite interactions This authoritative account is a crucial reference source for mosquito borne disease control and prevention This book is meant for researchers university students medical entomologists parasitologists and public health professionals **Entomology Ecology & Biodiversity** B.K. Tyagi,V. Veer,2011-04-01 The dominance of insects amongst all living organisms on earth coupled with infinite wealth of knowledge so important for our own existence is a fundamental scientific fact which is yet to be widely acknowledged This dominance means that in numbers of species beyond our comprehension these animals permeate diverse and essential natural processes in Earth s terrestrial aerial and freshwater ecosystems contributing to the function of the natural world as a self sustaining biological system Invariably insects are an integral and complex part of the terrestrial and freshwater ecosystems with which the future of humans is inextricably linked Insects have ultimately achieved a formidable diversity Generally insects are beneficial organisms however many of them are important pests and or vectors to a large number of parasites and other microbial pathogens to both human being his associates and the plants The burden caused by their infestation or infection run up to several million zillion rupees annually Therefore knowledge about extreme biodiversity and ecological relationships of these animals is a practical necessity in the man s own interest to sustain the species Packed with original 25 original articles reviews this book on Entomology Ecology and Biodiversity offers an invaluable opportunity to comprehend more deeply about our most intimate allies the insects The book truly establishes a foundation in basic entomology through varied and diverse treatment to entomology while focusing on specialized topics in insect ecology and biodiversity forensic and medical entomology **Insect Biodiversity : Functional Dynamics and Ecological Perspectives** T.N. for human welfare have the cause for increasing concern Biodiversity or variability among living organisms and the ecological complexes of which they are a part is essential for ensuring the basic ecological services and resources necessary for sustaining human welfare The loss of biodiversity is therefore considered one of the most serious problem threatening the world today An understanding of the ecological implications of the increasing loss of biodiversity not to mention of the economic implications has therefore become vital A biodiversity loss is irreversible A calls for increased caution in our efforts to convert and exploit natural resources Some minimal level of biodiversity is necessary to maintain ecological functioning which in turn is necessary for generating the biological resources on which human welfare depends Needless to emphasize that substantial biodiversity loss occurs due to forest clearing and degradation leading to the need for assessing biodiversity in different ecosystems Keeping these aspects in mind the present volume highlights biodiversity in different cropping systems besides that the impact of cold and hot deserts Selection of the topics in the various chapters is essentially because of the experience of the authors in the field of biodiversity
