Mammals Of Victoria Distribution Ecology And Conservation:

Mammals of Victoria Peter Menkhorst, 1995 This is the first book comprehensively to describe Victoria's mammal fauna and one of the most detailed books yet produced on any portion of Australia's mammal fauna. It provides concise summaries of current knowledge about the ecology, distribution, abundance, and conservation needs of 137 species of mammals found in Victoria since the earliest explorations by Europeans. It also includes accounts of marine species recorded from Victorian waters: 7 species of seals and 22 of whales and dolphins, and introduced species which have established feral populations. *Mammals of Victoria* is written by eight mammal specialists from the Flora and Fauna Branch of the Department of Conservation and Natural Resources and draws upon more than thirty years of research and survey into Victoria's mammals. A major feature of the book are the detailed maps showing the distribution of each species. These maps were generated from a comprehensive computer database, the Atlas of Victorian Wildlife, containing over 120 000 mammal records. Thus the maps show actual distributions, not someone's predictions of a species range. Introductory sections define the major groups of mammals, summarize the evolutionary history of mammals in Australia, describe the history of European discovery of Victoria's mammals and their plight since settlement, and describe the environmental features of sixteen natural regions used to explain the distribution of each species.

Mammal Species of the World Don E. Wilson, DeeAnn M. Reeder, 2005 This indispensable reference work belongs in public and academic libraries throughout the world and on the shelf of every biologist who works with mammals.

Wildlife of Victoria's South-West Grant Palmer, Jules Farquhar, 2024-02-01 Victoria's South West is an iconic region of Australia that includes the exceptional landscape features of the Grampians, Gariwerd, the Victorian Volcanic Plain with crater lakes and cones, the forests of the Great Dividing Range.

and Melbourne and Port Phillip Bay Victoria's South West supports remarkable wildlife including some found only in the region and is recognised as both nationally and globally significant for the conservation of biodiversity. Wildlife of Victoria's South West is a comprehensive photographic field guide to the region's wildlife many of which occur throughout south eastern Australia. It covers all the mammals, birds, reptiles and frogs that occur in the region including on land and in the coastal marine environment. Each of the 432 taxa profiles includes detailed information on identification, range, conservation status, habitat and ecology and the local Aboriginal name for the species when known. An outstanding colour image and regional distribution map is also included for each species. Additional information is provided on habitat types, conservation and management of wildlife in Victoria's South West as well as 19 places in the region to visit and view wildlife. Ideal for those who wish to identify and learn more about the diversity of animals found in the region while also gaining an understanding of the distinct role Victoria's South West has in contributing to conserving Australia's stunning wildlife.

Ecology and Conservation of Owls Ian Newton, 2002. Based on papers presented at the Owls 2000 conference held in Canberra, Australia. *The Action Plan for Australian Mammals 2012* Andrew Burbidge, John Woinarski, Peter Harrison, 2014-06-02. The Action Plan for Australian Mammals 2012 is the first review to assess the conservation status of all Australian mammals. It complements The Action Plan for Australian Birds 2010 (Garnett et al 2011, CSIRO Publishing) and although the number of Australian mammal taxa is marginally fewer than for birds, the proportion of endemic, extinct and threatened mammal taxa is far greater. These authoritative reviews represent an important foundation for understanding the current status, fate and future of the nature of Australia. This book considers all species and subspecies of Australian mammals including those of external territories and territorial seas. For all the mammal taxa, about 300 species and subspecies considered Extinct, Threatened, Near Threatened or Data Deficient, the size and trend of their population is presented along with information on geographic range and trend and relevant biological and ecological data. The book also presents the current conservation status of each taxon under Australian legislation, what additional information is needed for managers and the required management actions. Recovery plans where they exist are evaluated. The voluntary participation of more than 200 mammal experts has ensured that the conservation status and information are as accurate as possible and allowed considerable unpublished data to be included. All accounts include maps based on the latest data from Australian state and territory agencies, from published scientific literature and other sources. The Action Plan concludes that 29 Australian mammal species have become extinct and 63 species are threatened and require urgent conservation action. However, it also shows that where guided by sound knowledge, management capability and resourcing and longer term commitment, there have been some notable conservation success stories and the conservation status of some species has greatly improved over the past few decades. The Action Plan for Australian Mammals 2012 makes a major contribution to the conservation of a wonderful legacy that is a significant part of Australia's heritage. For such a legacy to endure, our society

must be more aware of and empathetic with our distinctively Australian environment and particularly its marvellous mammal fauna relevant information must be readily accessible environmental policy and law must be based on sound evidence those with responsibility for environmental management must be aware of what priority actions they should take the urgency for action and consequences of inaction must be clear and the opportunity for hope and success must be recognised It is in this spirit that this account is offered

Strahan's Mammals of Australia Andrew M. Baker, 2023-11-23 Fully updated and with completely reworked text and images this is the Fourth Edition of the acclaimed The Mammals of Australia Strahan's Mammals of Australia is the best book available on the subject being the most definitive comprehensive and up to date It provides a written account of every species of native mammal known to have existed in Australia since European settlement with 403 species covered in total It is beautifully illustrated with more than 1 500 colour photographs while each species account includes a detailed description of the animal and its behaviour Species covered range from marsupials monotremes and rodents through to bats seals and whales The new edition sees the addition of 14 newly described species and includes all the latest taxonomic treatments and many changes to names common and scientific and other features that have been accepted in the 14 years that have passed since the publication of the Third Edition

Wildlife of the Otways and Shipwreck Coast Grant Palmer, 2019-04-01 The Otways and Shipwreck Coast is known for its natural beauty and attracts millions of visitors each year particularly along the Great Ocean Road The value of the region's rich biodiversity is recognised at the national and global level and its wildlife is markedly different to other regions including eastern Victoria which supports similar vegetation types Wildlife of the Otways and Shipwreck Coast is a photographic field guide to the vertebrate wildlife of Victoria's south west It covers all the mammals birds reptiles and frogs that occur in the region including on land and in coastal waters Each of the 288 species profiles includes a description and information on identification range conservation status habitat use and ecology and is complemented by an exquisite colour photograph and a detailed distribution map The book also includes chapters on habitat types conservation and management and on 14 key places in the region to view wildlife This book will allow those interested in wildlife including residents and visitors to identify vertebrate animals found in the region Readers will also become more familiar with the distinct role the Otways has in conserving Australia's biodiversity

Taxonomy of Australian Mammals Stephen Matthew Jackson, Stephen Jackson, Colin Groves, 2015-06-16 Taxonomy of Australian Mammals utilises the latest morphometric and genetic research to develop the most up to date and comprehensive revision of the taxonomy of Australian mammals undertaken to date It proposes significant changes to the higher ranks of a number of groups and recognises several genera and species that have only very recently been identified as distinct This easy to use reference also includes a complete listing of all species subspecies and synonyms for all of Australia's mammals both native and introduced as well as terrestrial and marine This book lays a foundation for future taxonomic work and identifies areas where taxonomic studies should be targeted not only at the species

Reading,2000-09-30 Explore the multiple issues that surround species declines and conservation efforts through the only reference source to examine the conflicting conservation issues of 49 endangered species While the causes of endangerment are relatively easy to understand the ultimate or underlying factors are often far more complex and difficult to address An introduction to these issues and how to resolve them is provided in this unique collection of case studies of animal species that have been pushed to the brink of extinction Each case study provides the following information Common name Scientific name Order Family Status Threats Habitat Distribution Natural history Conflicting Issues Future and Prognosis Conservationists are increasingly recognizing that the ultimate causes of extinction are primarily socio economic and political yet biological approaches to recovery continue to dominate More inclusive interdisciplinary conservation programs are explored here to offer better prospects for managing problems and conflicts In addition to the case studies trends and common themes are explored to provide a comprehensive interdisciplinary approach to conservation Students and teachers can explore a wide variety of endangered species programs and the conflicting issues common to recovery efforts which will enable them to evaluate conservation practice and to draw their own conclusions for improvement **Invasion Biology and Ecological Theory** Herbert H. T. Prins,Iain J. Gordon,2014-01-23 Many conservationists argue that invasive species form one of the most important threats to ecosystems the world over often spreading quickly through their new environments and jeopardising the conservation of native species As such it is important that reliable predictions can be made regarding the effects of new species on particular habitats This book provides a critical appraisal of ecosystem theory using case studies of biological invasions in Australasia Each chapter is built around a set of eleven central hypotheses from community ecology which were

mainly developed in North American or European contexts The authors examine the hypotheses in the light of evidence from their particular species testing their power in explaining the success or failure of invasion and accepting or rejecting each hypothesis as appropriate The conclusions have far reaching consequences for the utility of community ecology suggesting a rejection of its predictive powers and a positive reappraisal of natural history *The Australian Zoologist* ,2005 Vols 1 7 and 16 include reports and proceedings of the Royal Zoological Society of New South Wales for 1913 1932 33 and 1969 70
