

DR. GLENN T. SEABORG has served as Chairman of the United States Atomic Energy Commission since 1961. Co-discoverer of a number of the transuranic elements, he was awarded the Nobel Prize in Chemistry with U. S. S. in 1952. He was in charge of the Upper Peninsula of Michigan, is now in charge of the University of California at Los Angeles and received his Ph.D. from the University of California at Berkeley. As Professor of Chemistry at the latter institution, he was Associate Director of Berkeley's Law Laboratory, and from 1958 to 1962 he served as Chairman of Berkeley. His many books include *Science of the Universe* (with U. S. S.), which received the Nobel Prize (Nobel Foundation Award). Dr. Seaborg holds a number of honorary degrees and has been honored with many other scientific distinctions and awards. Married and the father of six children, he lives in Washington, D.C.

WILLIAM R. CORLISS has had wide industrial and atomic research experience and is the author of *Scientific Studies, Research Towards the Sea*, and other books. Born in New York, Connecticut, he is an alumnus of Massachusetts Institute of Technology and has three graduate work at the University of California and Wisconsin. Formerly associated with the Lawrence Livermore Laboratory at Berkeley, and former Director of Advanced Research for the Machine Division of The Electric Company, he now devotes full time to writing and consulting. He and his wife live in Maryland with their four children.

Man And Atom Building A New World Through Nuclear Technology:

Man and Atom Glenn Theodore Seaborg, William R. Corliss, 1971 Discusses current developments and future applications of nuclear energy in oceanography astronautics medicine agriculture urban systems and other areas

Belief-based Energy Technology Development in the United States Chi-Jen Yang, 2009 This book is a comparative study of two energy policies that illustrates how and why technical fixes in energy policy failed in the United States In the post WWII era the U S government forcefully and consistently endorsed the development of civilian nuclear power It adopted policies to establish the competitiveness of civilian nuclear power far beyond what would have occurred under free market conditions Even though synthetic fuel was characterized by a similar level of economic potential and technical feasibility the policy approach toward synthetic fuel was sporadic and indeterminate The contrast between the unfaltering faith in nuclear power and the indeterminate attitude toward synthetic fuel raises many important questions The answers to these questions reveal provocative yet compelling insights into the policy making process The author argues that these diverging paths of development can be explained by exploring the dominant government ideology of the time or ideology of the state as the sociology literature describes it The forceful support for nuclear power was a result of a government preoccupied with fighting the Cold War The U S national security planners intentionally idealized and deified nuclear power to serve its Cold War psychological strategy These psychological maneuverings attached important symbolic meaning to nuclear power This symbolism in turn explains the society wide enthusiasm The fabricated myth of the Atomic Age became a self fulfilling prophecy and ushered in a bandwagon market On the other hand a confused indeterminate and relatively powerless welfare state stood behind synthetic fuel The different ideologies of the state explain the government s different attitudes toward nuclear and synfuel endeavors The overarching discovery is a mode of belief based decision making in long term energy planning This discovery goes against the prevalent assumption of rational choice in social sciences The author argues that rational choice assumption is inapplicable because of the extreme long term nature of energy planning It is not usually possible to predict the sociopolitical and economic conditions in the distant future Rational decisions require supporting information which often includes impossible long term foresights One cannot rationally choose between one unknown and another unknown Pivotal decisions in long term energy planning must inevitably be belief based and beliefs are subject to political manipulation and distortions by social mechanisms Understanding these peculiar but pervasive characteristics of energy business bears important lessons for today s decision making about energy technologies and the stakes if anything are even higher than before Energy policy communities historians of the Cold War American history and technology and sociologists would find this book an invaluable resource

Isotopes and Radiation Technology, 1971 Nuclear Politics in America Robert J. Duffy, 1997 Duffy s work traces nuclear politics from the creation of a powerful subgovernment through the public lobby reforms of the late 1960s and early 1970s and the deregulatory backlash of the Reagan years He

demonstrates that while policies did change in the 1970s they did not change as much as other accounts have suggested and that the industry continued to receive considerable federal support The book is particularly significant for extending the discussion of nuclear policy through the Bush and Clinton years including the controversy over waste disposal new licensing procedures enacted in the 1992 Amendments to the Atomic Energy Act and the effects of deregulation of electric utilities Amazon com viewed August 24 2020 *Nuclear Energy* United States Air Force Academy. Nye,1996-02-28 American Technological Sublime continues the exploration of the social construction of technology that David Nye began in his award winning book *Electrifying America* Here Nye examines the continuing appeal of the technological sublime a term coined by Perry Miller as a key to the nation s history using as examples the natural sites architectural forms and technological achievements that ordinary people have valued intensely Technology has long played a central role in the formation of Americans sense of selfhood From the first canal systems through the moon landing Americans have for better or worse derived unity from the common feeling of awe inspired by large scale applications of technological prowess American Technological Sublime continues the exploration of the social construction of technology that David Nye began in his award winning book *Electrifying America* Here Nye examines the continuing appeal of the technological sublime a term coined by Perry Miller as a key to the nation s history using as examples the natural sites architectural forms and technological achievements that ordinary people have valued intensely American Technological Sublime is a study of the politics of perception in industrial society Arranged chronologically it suggests that the sublime itself has a history that sublime experiences are emotional configurations that emerge from new social and technological conditions and that each new configuration to some extent undermines and displaces the older versions After giving a short history of the sublime as an aesthetic category Nye describes the reemergence and democratization of the concept in the early nineteenth century as an expression of the American sense of specialness What has filled the American public with wonder awe even terror David Nye selects the Grand Canyon Niagara Falls the eruption

of Mt St Helens the Erie Canal the first transcontinental railroad Eads Bridge Brooklyn Bridge the major international expositions the Hudson Fulton Celebration of 1909 the Empire State Building and Boulder Dam He then looks at the atom bomb tests and the Apollo mission as examples of the increasing ambivalence of the technological sublime in the postwar world The festivities surrounding the rededication of the Statue of Liberty in 1986 become a touchstone reflecting the transformation of the American experience of the sublime over two centuries Nye concludes with a vision of the modern day consumer sublime as manifested in the fantasy world of Las Vegas

[A Little Matter of Genocide](#) Ward Churchill, 1997 Ward Churchill has achieved an unparalleled reputation as a scholar activist and analyst of indigenous issues in North America Here he explores the history of holocaust and denial in this hemisphere beginning with the arrival of Columbus and continuing on into the present He frames the matter by examining both revisionist denial of the nazi perpetrated Holocaust and the opposing claim of its exclusive uniqueness using the full scope of what happened in Europe as a backdrop against which to demonstrate that genocide is precisely what has been and still is carried out against the American Indians Churchill lays bare the means by which many of these realities have remained hidden how public understanding of this most monstrous of crimes has been subverted not only by its perpetrators and their beneficiaries but by the institutions and individuals who perceive advantages in the confusion In particular he outlines the reasons underlying the United States's 40 year refusal to ratify the Genocide Convention as well as the implications of the attempt to exempt itself from compliance when it finally offered its endorsement In conclusion Churchill proposes a more adequate and coherent

definition of the crime as a basis for identifying punishing and preventing genocidal practices wherever and whenever they occur Ward Churchill enrolled Keetoowah Cherokee is Professor of American Indian Studies with the Department of Ethnic Studies at the University of Colorado Boulder A member of the American Indian Movement since 1972 he has been a leader of the Colorado chapter for the past fifteen years Among his previous books have been *Fantasies of a Master Race* *Struggle for the Land* *Since Predator Came* and *From a Native Son*
