Nemiroff,Calvin A. Colarusso,2013-11-21 This is the second book in the pioneering investigation of adult develop ment by Robert A Nemiroff and Calvin A Colarusso The first Adult Development A New Dimension in Psychodynamic Theory and Practice arrived to critical acclaim in 1981 It presented a psychodynamic theory of development during the second half of life and a model of normal adult functioning This book is the logical sequel expanding and elaborating the original formulations and applying them to the clinical practice of psychotherapy and psychoanalysis Nemiroff and Colarusso demonstrate that these are appropriate techniques for patients in the second half of life regardless of age They lay to rest many stereotypes and myths that have long interfered with the dynamic treatment of older patients and they propose exciting new conceptualizations such as that of adult develop mental arrests The genetic approach reaches beyond childhood and adolescence and takes on important new meaning by incorporating an adult developmental past that influences both psychopathology and transference The relationship between theory and therapy is richly demonstrated in the clinical presentations including ten detailed case histories of pa tients between the ages of 40 and 80 These and other clinical discussions provide ample evidence that a psychodynamic approach that is based on a sound adult developmental psychology can be extraordinarily effective They also demonstrate both the similarities and differences in working with older versus younger patients This work is a major contribution in a long neglected dimension of clinical psychiatry SHERWYN M **Human Superintelligence** John Stewart,2024-09-02 Whatever it is that you want to achieve in your life enhanced intelligence will help you get there It will enable you to develop better strategies for achieving your goals The same applies to humanity in general The spread of higher cognition will change everything It will produce a Second Enlightenment and a genuine science of complexity And a new kind of human will enter history and evolution This book provides science based psycho technologies that you can use to escalate your intelligence and cognition It shows how to use them recursively to improve your cognition indefinitely The psycho technologies will enable you to enhance your thinking then use your improved cognition to enhance your thinking further then use it to produce further improvements and so on open endedly These psycho technologies will enable you to scaffold an ability to stand outside your thinking and see it as object This critical capacity will enable you to see and evaluate the thinking strategies that you now use Whenever they fail you can identify the reasons and remedy the deficiencies The book shows you

how to do the same for the hierarchy of meta thinking strategies you use to develop your thinking strategies As part of the self scaffolding process you will actively seek opportunities to test and improve your cognitive strategies Finding a flaw in your thinking or meta thinking strategies provides you with an invaluable opportunity to enhance your cognitive capacity The capacity to stand outside your thoughts and feelings is highly effective for escaping and remedying maladaptive thinking However as the book shows it can also be used to escape maladaptive emotional responses and conditioning that may otherwise sabotage achieving your goals The psycho technologies also include methods to scaffold metasystemic cognition a capacity to build mental models of complex phenomena This higher cognition will give you the ability to comprehend and manipulate complex circumstances The book identifies the new movements in thought that you will need to incorporate into your thinking to develop metasystemic cognition The spread of metasystemic cognition is essential if human civilization is to survive the complex existential threats we face These challenges cannot be solved by the cognition that underpins mainstream science and spread during the First Enlightenment This cognition is largely limited to developing mechanistic reductionist models They are too simple to model complex phenomena and produce a genuine science of complexity The spread of metasystemic cognition will drive a Second Enlightenment It will enable a new kind of science that can solve the complex challenges that threaten us The book demonstrates how higher cognition will enable humanity to comprehend for the first time the larger scale evolutionary processes that have shaped humanity and will determine our future Significantly metasystemic cognition will enable you to see that evolution has a trajectory that includes a critical role for humanity individually as well as collectively Fulfilling your evolutionary role has the potential to provide a life that is meaningful and purposeful in a much larger scheme of things

Evolutionary Theory: Fringe or Central to Psychological Science Danielle Sulikowski, 2016-08-08 The computational theory of mind which views the brain as an information processor that operates on cognitive representations is central to modern cognitive psychology and is the dominant perspective from which brain function is conceptualized and studied Evolutionary Psychology EP is the application of evolutionary theory to understanding human behaviour and cognition Unlike other core Psychology topic areas such as Personality Learning or Developmental Psychology however EP is not defined by the subset of psychological phenomena it seeks to describe and understand It is instead defined by a specific meta theoretical perspective from which it seeks to potentially explain all psychological phenomena The central question posed by this volume is whether this overarching nature provides an opportunity for evolutionary approaches to offer an alternative meta theoretical perspective to the information processing representational view of brain function and behavior
