## **Respiration And Emotion:**

**Respiration and Emotion** Y. Haruki, I. Homma, A. Umezawa, Y. Masaoka, 2011-06-28 Gasps sighs and yawns are recognized by even a casual observer as involuntary expressions of emotion through the medium of respiration. In recent years scientific observation has focused on sensation and behavior as researchers investigate the relation of emotion and stress in disorders such as asthma, hyperventilation and panic disorder. Until now however the interplay of psychological factors and physiological responses has not been approached from the interdisciplinary perspective reported in this book. Brought together here is the work of physiologists, psychologists and researchers in behavioral medicine together with for the first time specialists and practitioners of traditional Japanese arts and culture. Knowledge of the art and control of breathing which are essential features of such disciplines as Zen and Noh opens a new and until now unexplored path for scientists seeking to understand the relation between respiration and emotion.

Breathing, Emotion and Evolution, 2014-09-04 Respiration is one of the most basic motor activities crucial for survival of the individual. It is under total control of the central nervous system which adjusts respiratory depth and frequency depending on the circumstances the individual finds itself in. For this reason this volume not only reviews the basic control systems of respiration located in the caudal brainstem but also the higher brain regions that change depth and frequency of respiration. Scientific knowledge of these systems is crucial for understanding the problems in the many patients suffering from respiratory failure. This well established international series examines major areas of basic and clinical research within neuroscience as well as emerging subfields.

*The Psychobiology of Emotions* Jack George Thompson, 2013-06-29 Regardless of culture most adult humans report experiencing similar feelings such as anger, fear, humor and joy. Such subjective emotional states however are not universal. Members of some cultures deny experiencing specific emotions such as fear or grief. Moreover within any culture individuals differ widely in their self reports of both the variety and intensity of their emotions. Some people report a vivid tapestry of positive and negative emotional experiences. Other people report that a single emotion such as depression or fear totally dominates their existences. Still others report flat and barren emotional lives. Over the past 100 years scientists have proposed numerous rival explanations of why such large individual differences in emotions occur. Various authors have offered anthropological, biochemical, ethological, neurological, psychological and sociological models of human emotions. Indeed the sheer number of competing theories precludes a comprehensive review in a single volume. Accordingly only a representative sample of models are discussed in this book and many equally important theories have been omitted. These omissions were not intended to prejudice the reader in favor of any particular conceptual framework. Rather this selective coverage was intended to focus attention upon the empirical findings that contemporary theories attempt to explain.
