Restoring North America's Birds Lessons From Landscape Ecology Second Edition:

Restoring North America's Birds Robert A. Askins, 2008-10-01
The decline of bird species in a wide range of North American habitats forests prairies shrublands mountain regions marshes and deserts has inspired two decades of intense scientific study of bird ecology and conservation But for professional scientists and amateur birders alike interpreting the results of these diverse studies is often complex and bewildering This accessible book pulls together recent research on bird species and habitats to show how basic ecological principles apply in seemingly different situations Robert A Askins provides an engaging introduction to bird ecology and concepts of landscape ecology focusing on such intriguing species as Bachman's Warbler Red Crossbill Mountain Plover and Marbled Murrelet Understanding the ancient landscapes of North America and how humans have changed them Askins says is essential for devising plans to protect and restore bird populations In addition to such obvious changes to the landscape as the clearing of forests and plowing of prairies more subtle changes also dramatically affect birds Species may disappear when we interrupt natural disturbances by suppressing wildfires or trapping out beaver or when we disrupt habitat with roads and housing developments Askins challenges some of the assumptions that underlie current conservation efforts and offers concrete recommendations based on sound ecological principles for protecting the rich natural diversity of North America's birds

Birds in Trouble Lynn E. Barber, 2016-04-01
As oil was washing up on the shores of Louisiana covering shorebirds and their nests and eggs after the Deepwater Horizon disaster Lynn Barber decided to write this book to heighten awareness not only of the plight of bird species that are declining in numbers every year but also of the ways in which the birds we see every day may also face the same fate First explaining the idea of birds in trouble and what that means in terms of population conservation status and national and international designations the book then turns to the habitats that are important to birds how they are affected by changes in these habitats and what ordinary people can do to help counter those negative effects Barber then profiles forty-two species that are in trouble in the United States discussing the likely reasons why and what if anything we can do to improve their situations Illustrated throughout with the author's signature bird art the book closes with a reminder about what we can do to ensure that the birds we see every day in our yards parks and communities will remain with us
