*Sabkha Ecosystems* M. Ajmal Khan, Benno Böer, Münir Öztürk, Thabit Zahran Al Abdessalaam, Miguel Clüsener-Godt, Bilquees Gul, 2014-05-12 Sustainable development is the key for the survival in 21st century The natural resources are finite and cannot be used with impunity because we are the custodian of these resources and have responsibility to pass these to the next generation This monumental task requires several major commitments and most important of them is to arrest population explosion which has already reached seven billion Natural resources like air to breath food to eat and water to drink and fossil fuel to maintain this life style are being overexploited Unrestrained consuming culture will accelerate undesired situation This situation will have more dire consequences in resource limited ecosystems like dry lands Given the severe scarcity of water ever increasing population and soil salinization out of the box solutions for the provision of food and clean energy is required to spare meager fresh water resources for conventional agriculture This volume contains a number of articles dealing with halophyte ecology bio geography ecophysiology hyper saline soils biofuels biosaline agriculture biosaline landscaping climate change mitigation and biodiversity It also contains the communication of innovative ideas such as the research into floating mangroves seagrass terraces as well as a World Halophyte Garden containing all known salt tolerant plant species It is hoped that the information provided will not only advance vegetation science but that it will truly generate more interdisciplinarity networking awareness and inspire farmers

and agricultural and landscaping stakeholders to seriously engage in halophyte cash crop production in coastal hyper saline areas

**Halophyte Plant Diversity and Public Health** Münir Öztürk,Volkan Altay,Moona Nazish,Mushtaq Ahmad,Muhammad Zafar,2023-03-01 Salinity is one of the acute problems causing enormous yield loss in many regions of the world This phenomenon is particularly pronounced in arid and semiarid regions Halophytes can remove salt from various types of problematic soils due to their unique morphological physiological and anatomical adaptations to these environments Halophytes are also used for the treatment of certain diseases but scientific documentation in terms of current phytotherapeutic applications is deficient in this unique group of plants Different ethnic groups around the world use medicinal halophytes according to their own beliefs and ancestor s experiences However their knowledge about the use of salt tolerant medicinal plants is usually confined to their own community There is thus a knowledge gap on halophytes which should be bridged and preserved This book provides a comprehensive account on the distribution of halophytes their ethnobotanical and medicinal aspects economic importance and chemical constituents along with scientific description The book therefore serves as a valuable resource for professionals and researchers working in the fields of plant stress biology and ethnobotanical aspects

Advances in Coastal Ecology - Processes, Patterns, and Services ,2025-03-05 Most of the world s human population lives along the coast where ecosystems are subject to the environmental degrading impacts brought by the increasing use of plastics loss of coastal buffers from storms like mangrove forests and decreasing biodiversity from which ecosystem services spring from In many cases as the effects of these changes become more widespread regions lacking basic information like the knowledge of what animals reside along a coastline are being threatened These developments occur on the complex backdrop of natural processes that shape the geological and sedimentary features of the shore The clash of the timescales of these changes short for human mediated impacts and long for geological ones creates thought provoking contrasts and gives insight into what the

future may hold for coastal ecosystems This book presents current research exploring solutions exposing effects and describing biological and geological coastline features for the first time in understudied regions of the world It is an essential text for libraries classrooms where coastal ecology is taught and the general readership interested in coastal ecosystems
