1. A Yellow Cake and Two Fruit Cakes

Buy three cartons of yellow cake mix and a large bag of candied fruit pieces at your favorite grocery store. Divide the candied fruit into two lots of almost equal volume, cut one lot into large pieces and the other into small pieces. Make three batches of batter in the manner prescribed on the cake mix cartons. Let the first batch alone, but fold large pieces of candied fruit in the second batch of batter and very small pieces in the third batch. Mix well. Bake the three batches separately. If you followed the baking instructions carefully, you have three cakes. Now take a bite from each.

The three cakes have different tastes. Without being too precise, let us say that the first cake is an object with one material phase while the remaining two have two material phases. No wonder then that the yellow cake's taste is different from the two fruit cakes^{*}.

The two fruit cakes are different from one another too. No two bites of the first fruit cake are likely to be similar: one bite may consist almost exclusively of a fruit piece and another may have no piece of fruit at all. But any bite of the second fruit cake is hardly different from another bite, because the small fruit pieces are likely to be distributed
