Selected Papers On Number Theory And Algebraic Geometry:

Selected Papers on Number Theory, Algebraic Geometry Katsumi Nomizu,1994 *Selected Papers on Number Theory and Algebraic Geometry* ,1996 **Selected Papers on Number Theory and Algebraic Geometry** Katsumi Nomizu,1996 This book presents papers that originally appeared in the Japanese journal Sugaku from the Mathematical Society of Japan The papers explore the relationship between number theory and algebraic geometry **Selected Papers on Number Theory, Algebraic Geometry, and Differential Geometry** Katsumi Nomizu,1994 This book presents papers that originally appeared in the Japanese journal Sugaku The papers explore the relationship between number theory algebraic geometry and differential geometry *Selected Papers on Number Theory, Algebraic Geometry, and Differential Geometry* Katsumi Nomizu,1994 **Selected Papers II** David Mumford,2019-07-15 Mumford is a well known mathematician and winner of the Fields Medal the highest honor available in mathematics Many of these papers are currently unavailable and the correspondence with Grothendieck has never before been published Algorithmic Algebra and Number Theory B.Heinrich Matzat,Gert-Martin Greuel,Gerhard Hiss,2012-12-06 This book contains 22 lectures presented at the final conference of the Ger man research program Schwerpunktprogramm Algorithmic Number The ory and Algebra 1991 1997 sponsored by the Deutsche Forschungsgemein schaft The purpose of this research program and of the meeting was to bring together developers of computer algebra software and researchers using com putational methods to gain insight into experimental problems and theoret ical questions in algebra and number theory The book gives an overview on algorithmic methods and on results ob tained during this period This includes survey articles on the main research projects within the program algorithmic number theory emphasizing class field theory constructive Galois theory computational aspects of modular forms and of Drinfeld modules computational algebraic geometry including real quantifier elimination and real algebraic geometry and invariant theory of finite groups computational aspects of presentations and representations of groups especially finite groups of Lie type and their Heeke algebras and of the isomorphism problem in group theory Some of the articles illustrate the current state of computer algebra sys tems and program packages developed with support by the research pro gram such as KANT and LiDIA for algebraic number theory SINGULAR RED LOG and INVAR for commutative algebra and invariant theory respec tively and GAP SYSYPHOS and CHEVIE for group theory and representation theory *Selected Papers* David Mumford,2010-07-26 Mumford is a well known mathematician and winner of the Fields Medal the highest honor available in mathematics Many of these papers are currently unavailable and the correspondence with Grothendieck has never before been published Selected Papers on Algebra and Topology by Garrett Birkhoff J.S. Oliveira,G.-C. Rota,1987-01-01 The present volume of reprints are what I consider to be my most interesting and influential papers on algebra and topology To tie them together and to place them in context I have supplemented them by a series of brief essays sketching their historieal background as I see it In addition to these I have listed some subsequent papers by others which have further developed

some of my key ideas The papers on universal algebra lattice theory and general topology collected in the present volume concern ideas which have become familiar to all working mathematicians It may be helpful to make them readily accessible in one volume I have tried in the introduction to each part to state the most significant features of ea ch paper reprinted there and to indieate later developments The background that shaped and stimulated my early work on universal algebra lattice theory and topology may be of some interest As a Harvard undergraduate in 1928 32 I was encouraged to do independent reading and to write an original thesis My tutorial reading included de la Vallee Poussin s beautiful Cours d Analyse Infinitesimale Hausdorff s Grundz ge der Mengenlehre and Frechet s Espaces Abstraits In addition I discovered Caratheodory s 1912 paper Vber das lineare Mass von Punktmengen and Hausdorff s 1919 paper on Dimension und Ausseres Mass and derived much inspiration from them A fragment of my thesis analyzing axiom systems for separable metrizable spaces was later published 2 This background led to the work summarized in Part IV   Algebraic Geometry and Number Theory victor ginzburg,2007-12-31 This book represents a collection of invited papers by outstanding mathematicians in algebra algebraic geometry and number theory dedicated to Vladimir Drinfeld Original research articles reflect the range of Drinfeld s work and his profound contributions to the Langlands program quantum groups and mathematical physics are paid particular attention These ten original articles by prominent mathematicians dedicated to Drinfeld on the occasion of his 50th birthday broadly reflect the range of Drinfeld s own interests in algebra algebraic geometry and number theory

Collected Works of John Tate Barry Mazur,Jean-Pierre Serre,2016-12-13 In these volumes a reader will find all of John Tate s published mathematical papers spanning more than six decades enriched by new comments made by the author Included also is a selection of his letters His letters give us a close view of how he works and of his ideas in process of formation   *Proceedings of the St. Petersburg Mathematical Society, Volume VIII* N.N. Uraltseva,2002-04-02 The articles in this collection present new results in partial differential equations numerical analysis probability theory and geometry The results ideas and methods given in the book will be of interest to a broad range of specialists   **Basic Algebraic Geometry 2** Igor R. Shafarevich,2013-08-31 Shafarevich s Basic Algebraic Geometry has been a classic and universally used introduction to the subject since its first appearance over 40 years ago As the translator writes in a prefatory note For all advanced undergraduate and beginning graduate students and for the many specialists in other branches of math who need a liberal education in algebraic geometry Shafarevich s book is a must The second volume is in two parts Book II is a gentle cultural introduction to scheme theory with the first aim of putting abstract algebraic varieties on a firm foundation a second aim is to introduce Hilbert schemes and moduli spaces that serve as parameter spaces for other geometric constructions Book III discusses complex manifolds and their relation with algebraic varieties K hler geometry and Hodge theory The final section raises an important problem in uniformising higher dimensional varieties that has been widely studied as the Shafarevich conjecture The style of Basic Algebraic Geometry 2 and its minimal prerequisites make it to a large extent

independent of Basic Algebraic Geometry 1 and accessible to beginning graduate students in mathematics and in theoretical physics   **Symbolic Computation: Solving Equations in Algebra, Geometry, and Engineering** Edward L. Green,2001 This volume presents the proceedings from the research conference Symbolic Computation Solving Equations in Algebra Analysis and Engineering held at Mount Holyoke College USA It provides an overview of contemporary research in symbolic computation as it applies to the solution of polynomial systems The conference brought together pure and applied mathematicians computer scientists and engineers who use symbolic computation to solve systems of equations or who develop the theoretical background and tools needed for this purpose Within this general framework the conference focused on several themes systems of polynomials systems of differential equations noncommutative systems and applications

Topology of real algebraic varieties and related topics V. Kharlamov,1996   Solitons, Geometry, and Topology: On the Crossroad V. M. Buchstaber,Sergeĭ Petrovich Novikov,1997   **Mixed Twistor D-modules** Takuro Mochizuki,2015-08-19 We introduce mixed twistor D modules and establish their fundamental functorial properties We also prove that they can be described as the gluing of admissible variations of mixed twistor structures In a sense mixed twistor D modules can be regarded as a twistor version of M Saito s mixed Hodge modules Alternatively they can be viewed as a mixed version of the pure twistor D modules studied by C Sabbah and the author The theory of mixed twistor D modules is one of the ultimate goals in the study suggested by Simpson s Meta Theorem and it would form a foundation for the Hodge theory of holonomic D modules which are not necessarily regular singular   **Mathematical Reviews** ,2003   *Topics in Statistical and Theoretical Physics* R. L. Dobrushin,1996   Twisted Isospectrality, Homological Wideness, and Isometry Gunther Cornelissen,Norbert Peyerimhoff,2023-05-10 The question of reconstructing a geometric shape from spectra of operators such as the Laplace operator is decades old and an active area of research in mathematics and mathematical physics This book focusses on the case of compact Riemannian manifolds and in particular the question whether one can find finitely many natural operators that determine whether two such manifolds are isometric coverings The methods outlined in the book fit into the tradition of the famous work of Sunada on the construction of isospectral non isometric manifolds and thus do not focus on analytic techniques but rather on algebraic methods in particular the analogy with constructions in number theory methods from representation theory and from algebraic topology The main goal of the book is to present the construction of finitely many twisted Laplace operators whose spectrum determines covering equivalence of two Riemannian manifolds The book has a leisure pace and presents details and examples that are hard to find in the literature concerning fiber products of manifolds and orbifolds the distinction between the spectrum and the spectral zeta function for general operators strong isospectrality twisted Laplacians the action of isometry groups on homology groups monomial structures on group representations geometric and group theoretical realisation of coverings with wreath products as covering groups and class field theory for manifolds The book contains a wealth of worked examples and open problems After perusing the book the

reader will have a comfortable working knowledge of the algebraic approach to isospectrality This is an open access book
