## 1. Microwave and Radar Week (MRW 2020)

The 9th Microwave and Radar Week (MRW 2020) was held in Warsaw the capital of Poland, on 5–7 October 2020. Initially, MRW 2020 was to be held in Lithuania, Vilnius, on 18–21 May 2020, but due to the COVID19 pandemic, it was decided to move it to Warsaw, Poland and shift dates to October (Figure 1). Due to the pandemic, for the first time in its history, MRW2020 was organised in a hybrid way—a part of the guests, mainly from Poland, were participating physically, while the majority of foreign guests were taking part virtually via electronic communication means. All presentations, including posters, were available on-line during MRW 2020 and a few weeks after the conference.

The 9th Microwave and Radar Week (MRW 2020) was a continuation of the very successful series of scientific events held previously in Warsaw (2004), Krakow (2006), Wrocław (2008), Vilnius (2010), Warsaw (2012), Gdansk (2014), Krakow (2016) and Poznan (2018). This time MRW 2020 consisted of four conferences: the 23rd International Microwave and Radar Conference (MIKON 2020), the 21st International Radar Symposium (IRS 2020), the Baltic URSI Symposium (Baltic URSI 2020) and the Signal Processing Workshop (SPW 2020). MRW 2020 was an opportunity to present the latest research results and exchange the newest scientific and engineering ideas related to radio, microwave and terahertz frequency devices, systems and techniques, radars, communications, electromagnetics, signal processing, as well as remote sensing.

The total number of MRW 2020 participants was 317 (118 on-site and 199 on-line), representing over 30 countries around the world. A total of 261 papers were presented

Selected Papers on Remote Sensing of Environment American Society of Photogrammetry, 1966    *Remote Sensing for Environmental Sciences* E. Schanda, 2012-12-06 The public's serious concern about the uncertainties and dangers of the consequences of human activities on environmental quality demands policies to control the situation and to prevent its deterioration. But far-reaching decisions on the environmental policy are impaired or even made impossible as long as the relevant ecological relations are not sufficiently understood and large scale quantitative information on the most important parameters is not available in sufficient quality and quantity. The techniques of remote sensing offer new ways of procuring data on natural phenomena with three main advantages: the large distance between sensor and object prevents interference with the environmental conditions to be measured; the potentiality for large scale and even global surveys yields a new dimension for the investigations of the environmental parameters; the extremely wide spectral range covered by the whole diversity of sensors discloses many properties of the environmental media not detectable within a single wave band as e.g. the visible. These significant additions to the conventional methods of environmental studies and the particular qualification of several remote sensing methods for quantitative determination of the natural parameters makes this new investigation technique an important tool both to the scientists studying the ecological relationship and the administration in charge of the environmental planning and protection.    **Special Report - Highway Research Board** National Research Council (U.S.). **Space Mankind's Fourth Environment** L. G. Napolitano, 2013-10-22 Space Mankind's Fourth Environment focuses on the emerging trends in astronomy taking into consideration space transportation and exploration. Along with this topic are various technological developments that are widely used and considered with space referred to in this book as humankind's fourth environment as another potential destination of man. Divided into four parts the book points at different challenges and problems related to the consideration of space as another environment for humankind which is observed in the manned space flight programs of the United States and Russia. The book gives emphasis on the improvement of space technology particularly the use of satellites in communication emphasizing the use of Intelsat 5 and European L sat in broadcast system. Studies on active and passive microwave sensors are discussed and a discussion on the medical results of a manned space

flight is also presented The book will surely boost the interest of astronomers and those interested in space technology and exploration *Selected Water Resources Abstracts* ,1991 *Geological Survey Professional Paper* ,1976 *Laser in Environmental and Life Sciences* Peter Hering,Jan Peter Lay,Sandra Stry,2013-04-17 Studies of environmental conditions have become more and more important for our knowledge about the complex processes resulting from natural and man made influences on our environment During recent years new analytical techniques have been developed that are mainly based on laser spectroscopy They are not only more sensitive and reach lower detection limits but they also give more detailed information on the species under investigation and their interactions with the environment They therefore can considerably deepen our understanding of correlations between different processes and their causes which is the precondition for avoiding ecological damage and for strengthening effective engagement in environmental protection Also in life sciences revolutionary new techniques for diagnostics have been introduced which allow a thorough investigation of biological processes in plants and their dependence on environmental conditions In particular for medical applications these new mainly non invasive techniques have influenced medical diagnostics and treatment considerably This book deals with these very interesting interdisciplinary subjects which demand experience and knowledge about both fields the basic physics of the detection techniques and the relevant problems in environmental and life sciences Therefore authors from a broad area of fundamental and applied research have contributed to this book which is organized in 4 sections Remote sensing of the atmosphere detection techniques for liquid and solid samples applications to gaseous substances and aerosols and finally applications in biology and medicine Environmental Geochemistry J.
