Proceedings of the Fifth Berkeley Symposium on Mathematical Statistics and Probability, Volume II, Part II Lucien M. Le Cam, Jerzy Neyman, 2024-04-05 This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1967 **Mathematical Reviews**, 1986 Proceedings of the

Fifth Berkeley Symposium on Mathematical Statistics and Probability, *Proceedings of COMPSTAT 2010* Yves Lechevallier, Gilbert Saporta, 2010-11-08 Proceedings of the 19th international symposium on computational statistics held in Paris august 22 27 2010 Together with 3 keynote talks there were 14 invited sessions and more than 100 peer reviewed contributed communications *On Measures of Information and Their Characterizations* Acze?, 1975-12-17 This book deals with measures of information the most important ones being called entropies their properties and reciprocally with questions concerning which of these properties determine known measures of information and which are the most general formulas satisfying reasonable requirements on practical measures of information This is the first book investigating this subject in depth

**Generalized Functions, Volume 4** I. M. Gel'fand, N. Ya. Vilenkin, 2016-04-19 The first systematic theory of generalized functions also known as distributions was created in the early 1950s although some aspects were developed much earlier most notably in the definition of the Green's function in mathematics and in the work of Paul Dirac on quantum electrodynamics in physics The six volume collection Generalized Functions written by I M Gel'fand and co authors and published in Russian between 1958 and 1966 gives an introduction to generalized functions and presents various applications to analysis PDE stochastic processes and representation theory The main goal of Volume 4 is to develop the functional analysis setup for the universe of generalized functions The main notion introduced in this volume is the notion of rigged Hilbert space also known as the equipped Hilbert space or Gelfand triple Such space is in fact a triple of topological vector spaces  $E \subset H \subset E'$  where  $H$  is a Hilbert space  $E'$  is dual to  $E$  and inclusions  $E \subset H$  and  $H \subset E'$  are nuclear operators The book is devoted to various applications of this notion such as the theory of positive definite generalized functions the theory of generalized stochastic processes and the study of measures on linear topological spaces **Specification Analysis in the**

**Linear Model** Maxwell L. King, David E. A. Giles, 2018-03-05 Originally published in 1987 This collection of original papers deals with various issues of specification in the context of the linear statistical model The volume honours the early

econometric work of Donald Cochrane late Dean of Economics and Politics at Monash University in Australia The chapters focus on problems associated with autocorrelation of the error term in the linear regression model and include appraisals of early work on this topic by Cochrane and Orcutt The book includes an extensive survey of autocorrelation tests some exact finite sample tests and some issues in preliminary test estimation A wide range of other specification issues is discussed including the implications of random regressors for Bayesian prediction modelling with joint conditional probability functions and results from duality theory There is a major survey chapter dealing with specification tests for non nested models and some of the applications discussed by the contributors deal with the British National Accounts and with Australian financial and housing markets

*Distribution Modulo One and Diophantine Approximation* Yann Bugeaud, 2012-07-05. This book presents state of the art research on the distribution modulo one of sequences of integral powers of real numbers and related topics. Most of the results have never before appeared in one book and many of them were proved only during the last decade. Topics covered include the distribution modulo one of the integral powers of  $\sqrt{2}$  and the frequency of occurrence of each digit in the decimal expansion of the square root of two. The author takes a point of view from combinatorics on words and introduces a variety of techniques including explicit constructions of normal numbers, Schmidt's games, Riesz product measures and transcendence results. With numerous exercises, the book is ideal for graduate courses on Diophantine approximation or as an introduction to distribution modulo one for non experts. Specialists will appreciate the inclusion of over 50 open problems and the rich and comprehensive bibliography of over 700 references.

*Random Sets* John Goutsias, Ronald P.S. Mahler, Hung T. Nguyen, 2012-12-06. This IMA Volume in Mathematics and its Applications, RANDOM SETS: THEORY AND APPLICATIONS, is based on the proceedings of a very successful 1996 three day Summer Program on Application and Theory of Random Sets. We would like to thank the scientific organizers John Goutsias, Johns Hopkins University, Ronald P. S. Mahler, Lockheed Martin, and Hung T. Nguyen, New Mexico State University, for their excellent work as organizers of the meeting and for editing the proceedings. We also take this opportunity to thank the Army Research Office (ARO), the Office of Naval Research (ONR), and the Eagan Minnesota Engineering Center of Lockheed Martin Tactical Defense Systems whose financial support made the summer program possible.

*Aspects of Vagueness* Heinz J. Skala, S. Termini, E. Trillias, 2012-12-06. The Second World Conference on Mathematics at the Service of Man was held at the Universidad Politécnica de Las Palmas, Canary Islands, Spain, June 28 to July 3, 1982. The first volume of the Proceedings of the Conference, entitled *Functional Equations: Theory and Applications*, has appeared in the Reidel series *Mathematics and Its Applications*. The papers in this volume consist of the invited lectures delivered at the Conference, Section 7: Non-Classical Logics and Modelling, as well as some selected papers which offer an introduction to the philosophy, methodology, and to the literature of the broad and fascinating field of vagueness, imprecision, and uncertainty. The contributed papers appeared in the volume of photo offset preprints distributed at the Conference. It is our hope that the papers present a good sample with respect to the background, the formalism, and practice of this area of research as far as we understand it today. As the subject Vagueness touches many aspects of human thinking, the contributions have been made from a broad spectrum ranging from philosophy through pure

mathematics to probability theory and mathematical economics therefore the careful reader should find some new insights here In conclusion the editors want to thank all authors who have contributed to this volume the publishers of Commentationes Mathematicae Universitatis Carolinae for permission to reprint the paper Fuzziness and Fuzzy Equality Commentationes Mathematicae Universitatis Carolinae 23 1982 249 267 and D Reidel for friendly cooperation
