

## REVISION QUESTIONS

### Q 1

Refer to the case of *R v Edwards* (1993) 178 CLR 193, and answer the following:

- Will evidence of a lie affect the credit of the accused?

Answer: Yes.

- Will evidence of a lie be used as an implied admission of guilt?

Answer: If a lie is inconsistent with innocence it may amount to an implied admission of guilt.

- Is every lie told by an accused probative of their guilt?

Answer: If the accused is telling a lie because he or she perceives that the truth is inconsistent with his or her innocence, then the telling of the lie may constitute evidence of guilt. The lie must be about some circumstance or event connected with the offence.

- What should be the contents of the judge's direction to a jury in respect of a lie told by the accused?

Answer: A jury can only consider lies as corroboration of guilt if they are satisfied that the lie:

- Is deliberate;
- Related to material issue;
- Springs from realisation of guilt and fear of the truth;
- Can be clearly shown to be a lie by evidence other than that to be corroborated.

The jury should be instructed that there may be reasons for telling lies apart from a realisation of guilt, such as panic, to protect some other person, to avoid a consequence extraneous to the offence. The jury should be instructed that if they accept the explanation for the lie then they cannot use the lie as an admission of guilt.

**User-Centred Design of Systems** Jan Noyes,Chris Baber,2012-12-06 System design has conventionally been the province of engineers and the approaches taken to the design of systems have conventionally led to formal specification of the system The past decade or two has seen the rise of another approach that of human computer interaction HCI Given the number of incidents and accidents which are attributed to human error it is sensible to develop an approach to system design which views humans as an essential element in the system Thus an important aspect of designing systems is the study of the interaction between humans and the technology that they use In terms of bringing computers and computing to a wide audience the 1980s were the boom years The first personal computer PC was launched onto the market in February 1978 and since then PCs have become a common place feature of our homes offices schools retail outlets hospitals banks etc Within Western society today there are very few organisations that have not been infiltrated by computer technology and few individuals who have not had experience of computers However the increase in use of computers has not been matched with a corresponding spread of training of users much of the human computer interaction research has sought to design systems which do not require special training i e which people can simply walk up to and use Not surprisingly this has resulted in a number of difficulties some of which have yet to be satisfactorily resolved
