Selected Works Of Emil Wolf With Commentary:

Selected Works Of Emil Wolf (With Commentary) Emil Wolf, 2001-06-04 This invaluable book presents most of the important papers of Emil Wolf published over half a century. It covers chiefly diffraction theory especially the analysis of the focal region, the theory of direct and inverse scattering, phase space methods in quantum mechanics, the foundation of radiometry, phase conjugation and coherence theory. Several papers which have become classics of the optical literature are included such as those on Wolf's rigorous formulation of the theory of partial coherence and partial polarization, the introduction of diffraction tomography and his discovery of correlation induced shifts of spectral lines often called the Wolf effect. There are also papers dealing with the historical development of optics and some review articles. Selected Papers, 1945-1980, with Commentary Chen Ning Yang, 2005 A remarkable personal and professional chronicle by one of today's leading physicists, this is a collection of Chen Ning Yang's personally selected papers supplemented by his insightful commentaries. Including previously unpublished or hard to find works, this volume contains Yang's important papers on statistical physics, nuclear forces and particle physics. Among them are his seminal work with T D Lee on the nonconservation of parity for which they won the Nobel Prize and his work with R L Mills which led to modern gauge theories with their exciting prospects for the broad unification of field theories. The commentaries were written especially for this volume and provide a fascinating account of Yang's development as a physicist as well as a look at many important physicists of the 20th century. They trace the development of Yang's interests and ideas from his graduate school days to the present, showing how he worked with his colleagues and how their physics came into being. Together the papers and commentaries in this unique collection comprise a powerful personal statement shedding light on both the intellectual development of a great physicist and on the nature of scientific inquiry.

Selected Papers Of Richard Feynman (With Commentary) Laurie M Brown, 2000-10-25 These scientific papers of Richard Feynman are renowned for their brilliant content and the author's striking original style. They are grouped by topic: path integral approach to the foundations of quantum mechanics and quantum field theory, renormalized quantum electrodynamics, theory of superfluid liquid helium, theory of the Fermi interaction, polarons, gravitation, partons, computer theory, etc. Comments on Feynman's topics are provided by the editor together with biographical notes and a complete bibliography of Feynman's publications. *Selected Papers (1945-1980) Of Chen Ning Yang (With Commentary)* Chen Ning Yang, 2005-08-22 A remarkable personal and professional chronicle by one of today's leading physicists, this is a collection of Chen Ning Yang's personally selected papers supplemented by his insightful commentaries. Adventures In Theoretical Physics: Selected Papers With Commentaries Stephen L. Adler, 2006-01-16 During the period 1964-1972 Stephen L. Adler wrote seminal papers on high energy neutrino processes, current algebras, soft pion theorems, sum rules, and perturbation theory anomalies that helped lay the foundations for our current standard model of elementary particle physics. These papers are reprinted here together with detailed historical commentaries describing how they evolved, their relation to other work in the field, and their connection to recent literature. Later important work by Dr. Adler on a wide range of topics in fundamental theory, phenomenology, and numerical methods and their related historical background is also covered in the commentaries and reprints. This book will be a valuable resource for graduate students and researchers in the fields in which Dr. Adler has worked and for historians of science studying physics in the final third of the twentieth century, a period in which an enduring synthesis was achieved.

Selected Papers of K C Chou Yue-Liang Wu, 2009 This volume presents a collection of selected papers written by Prof. Chou. The papers are organized into four parts according to the subject of research areas and the language of publishing journals. Part I in English and Part III in Chinese are papers on field theories, particle physics, and nuclear physics. Part II in English and Part IV in Chinese are papers on statistical physics and condensed matter physics. From the published papers, it illustrates and is clearly evident how Prof. Chou was constantly at the frontiers of theoretical physics in various periods and carried out creative research works, experimenting with initial ideas and motivations as well as how he has driven and worked in different key research directions of theoretical physics, all for which he has made significant contributions to various interesting research areas and interdisciplinary fields.

Quantum Mechanics In Phase Space: An Overview With Selected Papers Thomas L. Curtright, David B. Fairlie, Cosmas K. Zachos, 2005-12-09 Wigner's quasi-probability distribution function in phase space is a special Weyl representation of the density matrix. It has been useful in describing quantum transport in quantum optics, nuclear physics, decoherence, quantum computing, and quantum chaos. It is also important in signal processing and the mathematics of algebraic deformation. A remarkable aspect of its internal logic, pioneered by Groenewold and Moyal, has only emerged in the last quarter century; it furnishes a third alternative formulation of quantum mechanics independent of the conventional Hilbert space or path integral formulations. In this logically complete and self-standing formulation, one need not choose sides: coordinate or momentum space. It works in full phase space, accommodating the uncertainty principle, and it offers unique insights into the classical limit of quantum theory. This invaluable book is a collection of the seminal papers on the formulation with an introductory overview which provides a trail map for those papers.

an extensive bibliography and simple illustrations suitable for applications to a broad range of physics problems It can provide supplementary material for a beginning graduate course in quantum mechanics

Formation And Evolution Of Black Holes In The Galaxy: Selected Papers With Commentary Hans A Bethe, Gerald E Brown, Chang-hwan Lee, 2003-03-04 In published papers H A Bethe and G E Brown worked out the collapse of large stars and supernova explosions They went on to evolve binaries of

compact stars finding that in the standard scenario the first formed neutron star always went into a black hole in common envelope evolution C H Lee joined them in the study of black hole binaries and gamma ray bursts They found the black holes to be the fossils of the gamma ray bursts From their properties they could reconstruct features of the burst and of the accompanying hypernova explosions This invaluable book contains 23 papers on astrophysics chiefly on compact objects written over 23 years The papers are accompanied by illuminating commentary In addition there is an appendix on kaon condensation which the editors believe to be relevant to the equation of state in neutron stars and to explain why black holes are formed at relatively low masses
