

The background of the book cover is a dark, grainy image showing a cosmic ray shower. A bright, vertical streak of light, likely a particle track, runs down the center, with numerous smaller, branching streaks and spots radiating outwards, creating a starburst or 'shower' effect. The colors are primarily black, white, and shades of gray, with some blue and green highlights in the branching structures.

Cosmic Ray Interactions, Propagation, and Acceleration in Space Plasmas Lev Dorman, 2006-09-02 Chapter 1 briefly describes the main properties of space plasmas and primary CR Chapter 2 considers the problem of CR propagation in space plasmas described by the kinetic equation and different types of diffusion approximations Chapter 3 is devoted to CR non linear effects in space plasmas caused by CR pressure and CR kinetic stream instabilities with the generation of Alfvén turbulence In Chapter 4 different processes of CR acceleration in space plasmas are considered The book ends with a list providing more than 1 300 full references a discussion on future developments and unsolved problems as well as Object and Author indexes

Astrophysics, Astronomy and Space Sciences in the History of the Max Planck Society Luisa Bonolis, Juan-Andres Leon, 2022-12-05 This book provides the first comprehensive historical account of the evolution of scientific traditions in astronomy astrophysics and the space sciences within the Max Planck Society Structured with in depth archival research interviews with protagonists unpublished photographs and an extensive bibliography it follows a unique history from the post war relaunch of physical sciences in West Germany to the spectacular developments and successes of cosmic sciences in the second half of the 20th century up to the emergence of multi messenger astronomy It reveals how the Society acquired national and international acclaim in becoming one of the world's most productive research organizations in these fields

The Physics of a Lifetime Vitaly L. Ginzburg, 2013-03-09 Every reader interested in understanding the important problems in physics and astrophysics and their historic development over the past 60 years will enjoy this book immensely The philosophy history and the individual views of famous scientists of the 20th century known personally to the author make this book fascinating for non physicists too The book consists of three parts on I major problems of physics and astrophysics II the philosophy and history of science and III memorial essays on famous physicists The author is an internationally renowned scientist who summarizes here his life long interests experience and insights into the work of other eminent 20th century physicists Professor Ginzburg's fundamental contributions to the theory of superconductivity encapsulated in the famous and widely used Ginzburg Landau equations have been recognized with the 2003 Nobel Prize in Physics shared with A A Abrikosov and A E Leggett

Cosmic Gamma-Ray Sources K.S. Cheng, Gustavo

E. Romero, 2012-11-03 Gamma ray astronomy has undergone an enormous progress in the last 15 years. The success of satellite experiments like NASA's Compton Gamma Ray Observatory and ESA's INTEGRAL mission as well as of ground based instruments have opened new views into the high energy Universe. Different classes of cosmic gamma ray sources have been now detected at different energies in addition to young radio pulsars and gamma ray bursts, the classical ones. The new sources include radio quiet pulsars, microquasars, supernova remnants, starburst galaxies, radio galaxies, flat spectrum radio quasars and BL Lacertae objects. A large number of unidentified sources strongly suggests that this brief enumeration is far from complete. Gamma ray bursts are now established as extragalactic sources with tremendous energy output. There is accumulating evidence supporting the idea that massive stars and star forming regions can accelerate charged particles up to relativistic energies making them gamma ray sources. Gamma ray astronomy has also proved to be a powerful tool for cosmology, imposing constraints to the background photon fields that can absorb the gamma ray flux from distant sources. All this has profound implications for our current ideas about how particles are accelerated and transported in both the local and distant Universe. The evolution of our knowledge on the gamma ray sky has been so fast that it is not easy for the non specialist scientist and the graduate student to be aware of the full potential of this field or to grasp the fundamentals of a given topic in order to attempt some original contribution.

Highlights of Astronomy C. de Jager, 2012-12-06 After the same pattern as the XIIIth General Assembly of the International Astronomical Union, the present Volume of the *Highlights in Astronomy* contains the texts of the invited discourses given at the XIVth General Assembly held in Brighton, England, August 1970. It contains further the papers and discussion remarks presented at the six joint discussions as well as the invited papers given at the special session on the Moon. In addition, this Volume contains the papers given at the joint meeting of Commissions 24, 27, 30, 33 and 37 on RR Lyrae Stars. It goes without saying that the nearly hundred papers printed in this Volume represent only a minor part of all matter dealt with at the XIVth General Assembly of the Union; the many important discussions that took place in a few hundred commission meetings are not included. For short abstracts and reviews of these, the reader is referred to *Transactions of the International Astronomical Union XIVB*. I wish to thank those who contributed to this Volume for the speed in submitting the manuscripts of their papers. This together with the efficiency of the Publishers allowed for a rapid publication.

Splinters of Infinity Mark Wolverton, 2024-03-12 The riveting story of a modern age scientific feud between two Nobel Prize winning scientists over the nature of cosmic rays and the universe. Set in a revolutionary era of physics and science when a series of rapid fire discoveries was upending our understanding of the universe, *Splinters of Infinity* by Mark Wolverton tells a little known story, the tale of two of America's foremost physicists, Robert Millikan (1868-1953) and Arthur Compton (1892-1962) who found themselves locked in an intense, often deeply personal conflict about cosmic rays. Confirmed in 1912, cosmic rays' enigmatic forms of penetrating radiation seemed to raise all new questions about the origins of the universe, but they also offered the potential to explain everything or reveal the existence of

God In engaging accessible prose Wolverton takes the reader through the twists and turns of the Millikan Compton debate one of the first major public examples of how heated the controversies among scientists could become and the lengths that scientists would go to settle their disputes What set them apart at least in most cases Wolverton shows was their ability to concentrate finally on what mattered the science Along the way Wolverton probes the forever elusive question still unanswered today about where cosmic rays come from and what they reveal about black holes distant galaxies the existence of dark matter and dark energy and the birth of the universe concluding that these splinters of infinity may not hold the keys to the secret of creation but do bring us ever closer to it *Consolidated Translation Survey*, 1961-04 **Nuclear Science Abstracts**, 1975-12 **Astrophysical Sources of High Energy Particles and Radiation** M.M. Shapiro, Todor Stanev, John P. Wefel, 2013-04-18 A wide range of topics are covered ranging from supernovae to active galactic nuclei cosmic gamma rays to neutrinos and dark matter The basic emphasis is on physics astrophysics and experimental observational techniques scientific implications of current results and prospects for future advances The fields surveyed are in rapid development and the exploration of our high energy universe is proceeding rapidly with exciting new discoveries What unifies much of the new data is the idea of particle acceleration to enormous energies and the subsequent interactions of the particles with the local medium It is this focus that makes the book both timely and an important contribution to the field **Conference Papers**, 1977 Papers for each conference issued in several volumes Volumes distributed to conference registrants have title Conference papers other volumes of papers published after the conference are identified as Late papers Invited papers or other similar titles Most conferences also have a general index volume *Oort and the Universe* Hugo van Woerden, W.N.
