**Environmental Technologies to Treat Selenium Pollution** Piet Lens, Kannan Pakshirajan, 2021-08-15

Selenium contamination of air, aquatic environments, soils and sediments is a serious environmental concern of increasing importance. Selenium has a paradoxical feature in bringing about health benefits under the prescribed level, but only a few-fold increase in its concentration causes deleterious effects to flora and fauna, humans and the environment. *Environmental Technologies to Treat Selenium Pollution: Principles and Engineering* presents the fundamentals of the biogeochemical selenium cycle and which imbalances in this cycle result in pollution. Overviews of chemical and biological technologies for successful treatment of selenium-contaminated water, air, soils and sediments, explores the recovery of value-added products from selenium-laden waste streams, including biofortification and selenium-based nanoparticles and quantum dots. This book may serve both as an advanced textbook for undergraduate and graduate students majoring in environmental sciences, technology or engineering.

as well as a handbook for tertiary educators researchers professionals and policy makers who conduct research and practices in selenium related fields It is essential reading for consulting companies when dealing with selenium related environmental bio technologies
