was a distinctive and personal one What emerges from this book is the natural and private crystallization of his experiences with his patients and teachers As he says in his preface Psychoanalysis is an extremely private discipline of sensibility and skill The practice of psychoanalysis multiplies this privacy into a specialized relationship between two persons who through the very nature of their exclusivity with each other change each other The first thing I wish to say about my work reported in these papers is that my patients have helped me become and personalize my potential of thought affectivity and effort into a way of life that I find deeply satisfying

The World Around Us: A Holistic Approach to Perception Pasquale De Marco, 2025-03-09 Perception is the process by which we take in information from our environment and interpret it It is a complex process that involves our senses our brains and our past experiences In this book we explore the nature of perception and how it shapes our understanding of the world around us We begin by examining the role of the body in perception Our bodies are not just passive observers of the world they are active participants in the process of perception The way our bodies move and interact with the environment influences what we perceive For example the way we touch an object can tell us a lot about its texture temperature and weight We also explore the role of the senses in perception Our senses are the gateways through which information from the environment enters our brains Each sense has its own unique way of perceiving the world For example our eyes perceive light our ears perceive sound and our noses perceive smell The brain then integrates the information from all of our senses to create a coherent picture of the world around us Attention is another important aspect of perception Attention is the process of focusing our awareness on certain aspects of our environment while ignoring others Attention allows us to focus on the things that are most important to us and to filter out the things that are not Consciousness is the subjective experience of the world It is the ability to be aware of our own thoughts feelings and experiences Consciousness is a complex phenomenon that is still not fully understood by scientists However we know that consciousness is essential for our ability to perceive the world around us Finally we explore the relationship between perception and the self The self is the sense of identity that we have It is the part of us that is aware of our own thoughts feelings and experiences The self is also the part of us that interacts with the world around us Perception is essential for the development and maintenance of the self This book is a comprehensive and accessible introduction to the fascinating world of perception It is essential reading for anyone interested in psychology philosophy or neuroscience If you like this book write a review
