Journeys in Complexity Alfonso Montuori,2016-01-22 In this book fascinating autobiographical accounts by leading scholars in a variety of fields and disciplines provide a rich introduction to the art and science of complexity and systems thinking We learn how the authors interest in complexity thinking developed the key figures and texts they encountered along the way the experiences that shaped their path their major works and their personal journeys This volume serves as an introduction to complexity as well as a vivid account of the personal and intellectual development of important scholars This book was originally published as a special issue of World Futures **Self-Organization of Complex Structures** Frank Schweitzer,1997-07-16 During the past twenty years a broad spectrum of theories and methods have been developed in physics chemistry and molecular biology to explain structure formation in complex systems These methods have been applied to many different fields such as economics sociology and town planning and this book reflects the interdisciplinary nature of complexity and self organisation The main focus is on the emergence of collective phenomena from individual or microscopic interactions Presents a wide ranging overview from fundamental aspects of the evolution of complexity to applications in biology ecology sociology economics and urban structure formation Research on Project, Programme and Portfolio Management Ronggui Ding,Reinhard Wagner,Constanta-Nicoleta Bodea,2022-01-24 This volume brings together selected

and extended papers representative of work presented at the 8th IPMA Research Conference which was held online between 9th and 11th September 2020 It explores the topics of project programme and portfolio management and self organizing in and through projects Offering international and multidisciplinary perspectives this book answers questions such as What is the impact of self organization on organizational structures processes cultures and leadership How can we define the transformative power of self organization What is the motivation of individuals to perform activities to engage with others and organizations in order to get things done Which kinds of leadership best support self organizing in projects What have disciplines like natural science psychology philosophy sociology and management to offer in this respect What are the cultural limitations and potentials regarding self organization in projects and how do we deal with them Research on Project Programme and Portfolio Management is a valuable resource for all researchers and project management professionals interested in autonomous working and self organizing *Beyond the Big Bang* Willem B. Drees, 1990 Originally presented as the author's thesis doctoral University of Groningen Includes bibliographical references p 291 316 and index **The Self-organizing Polity** Laurent Dobuzinskis, 2019-07-11 Is the study of living systems a useful metaphor for political science In this book Dr Dobuzinskis argues for further exploration of biopolitical models to explain the complexity of political theory and social change His discussion emphasizes the new cybernetics which considers not only self regulating but also self organizing or self producing systems Self organizing systems operate in an autonomous sphere comparable to the autonomy of the political community and the political actors who compose this community The autonomy of these systems is maintained through dynamic equilibration processes that entail not only the preservation of a given structure but also at crucial times the creative rearrangement of the existing structure and its transformation into a new pattern of relations From this perspective a political crisis is both a threat to the political system and the occasion of its renewal stability may also mean decay Emphasizing the links that have developed historically between the natural and social sciences this book is a reflection on the merits of and difficulties involved in representing the evolutionary process at the political level as the problematic reproduction of national communities and states **Theoretical Knowledge** Vyacheslav S. Stepin, 2005-11-13 In *Theoretical Knowledge* an original conception of a structure and dynamics of scientific knowledge is proposed A detailed analysis of the foundations of science performed by the author allowed him to develop new ideas and approaches to demonstrate how sociocultural factors are incorporated in the process of yielding of new theories He shows direct and inverse links between foundations of science and new theories and empirical facts evolved from those how among many potentially possible histories of science a culture selects just those directions which become a real history of science The author analyses mechanisms of the generation of scientific theories and shows that those are changed in the process of historical development of science He displays three historical types of scientific rationality classical non classical and post non classical which appears in modern science and shows features of their coexistence and interplay It is shown that along

with the emerging of post non classical rationality science increases the sphere of its worldview applications Science begins to correlate not only with the basic values of technogenic civilization but also with some values and patterns of traditional cultures The investigation is based on the extensive literature on the history of natural and social sciences The reader will find in the book authentic historical reconstructions of the processes of the development of classical and quantum electrodynamics relativity and conceptions of evolution in biology

The Reenchantment of Science David Ray Griffin,1988-05-06 This book describes the move from modern mechanistic science to a post modern organismic science David Ray Griffin gives voice to a revisionary postmodernism based on the work of Whitehead and Hartshorne that contrasts with the relativistic nihilistic postmodernism of Heidegger Derrida and Wittgenstein The book brings together some of today's most creative thinking about science Griffin's introductory essay summarizes the way in which the mechanistic view led to the disenchantment of science and the various reasons for the reversal of this process in our time The essays on physics cosmology biology ecology psychosomatic medicine and parapsychology bring out the various dimensions of the reenchantment of science the replacement of modern dualism and reductionism with an ecological organismic paradigm the priority of internal relations to external the causal power of experience the presence of experience purpose and intrinsic value throughout nature influence at a distance the laws of nature as habits the presence of a divine whole in all the parts and the history of the universe as a self creative meaningful story This book gives a powerful voice to this emerging movement's proposals for a postmodern science spirituality and world order

Unified Field Mechanics: Natural Science Beyond The Veil Of Spacetime - Proceedings Of The IX Symposium Honoring Noted French Mathematical Physicist Jean-pierre Vigiér Richard L Amoroso,Louis H Kauffman,Peter Rowlands,2015-09-08 Unified Field Mechanics the topic of the 9th international symposium honoring noted French mathematical physicist Jean Pierre Vigiér cannot be considered highly speculative as a myopic critic might surmise The 8th Vigiér Symposium proceedings The Physics of Reality should in fact be touted as a companion volume because of its dramatic theoretical Field Mechanics in additional dimensionality Many still consider the Planck scale zero point field stochastic quantum foam as the basement of reality This could only be considered true under the limitations of the Copenhagen interpretation of quantum theory As we enter the next regime of Unified Field Mechanics we now know that the energy dependent Einstein Minkowski manifold called spacetime has a finite radius beyond which a large scale multiverse beckons So far a battery of 14 experiments has been designed to falsify the model When the 1st is successfully performed a revolution in Natural Science will occur This volume strengthens and expands the theoretical and experimental basis for that immanent new age

Architects of World History Kenneth R. Curtis,Jerry H. Bentley,2014-02-05 Architects of World History presents an innovative collection of original essays by leading scholars associated with World History exploring through intellectual autobiography the ideas challenges and inspirations that are shaping the field Features original accessible contributions from pioneering scholars in the field Offers insights into the process of developing a

workable world history research topic and the experience of professional life as a world historian Points to methodological challenges the scholar s current research agenda in relation to the development of world history and future directions anticipated for key areas within world history *Power, Autonomy, Utopia* R. Trappl,2012-12-06 The world is becoming more and more intractable We have learned to discern systems in it we have developed a highly sophisticated mathematical apparatus to model them large computer simulation programs handle thousands of equations with zillions of parameters But how adequate are these efforts Part One of this volume is a discussion containing some proposals for eliminating the constraints we encounter when approaching complex systems with our models Is it possible at all to design a political or economic system without considering killing torture and oppression Can we adequately model the present state of affairs while ignoring their often symbolic and paradoxical nature Is it possible to explain teleological concepts such as means and ends in terms of basically 17th century Newtonian mechanics Can we really make appropriate use of the vast amount of systems concepts without exploring their relations without developing a system of systems concepts And why do more than 95% of all system modelling efforts end in just a heap of printed paper and nothing else Leading scientists from different disciplines who have different viewpoints and use very different styles in presenting their message were invited to present their approaches to these and to other problems of equal importance Either as Plenary Lectures at the Seventh European Meeting on Cybernetics and Systems Research at the University of Vienna Austria Professors Stafford Beer Helga Nowotny and Robert Rosen Ross Ashby Memorial Lecture or as Invited Lectures to the Austrian Society **Passionate Marriage** David Morris Schnarch,1997 A respectful erotic uplifting and spiritual guide to sexual and emotional fulfillment THE EMERGENCE AND NATURE OF HUMAN HISTORY Volume One Joseph Miller,2012-07-29 This book attempts to define the issues that face us in trying to understand the often overwhelming complexity of the human experience It is intellectually challenging broad in its scope richly detailed and densely argued It is the first in a projected series of five volumes in which the author will seek to touch on every aspect of human historical reality and all the multitudinous variables that have shaped it *Toward Solving Complex Human Problems* Brian E. White,2020-12-18 This book serves three basic purposes 1 a tutorial type reference for complex systems engineering CSE concepts and associated terminology 2 a recommendation of a proposed methodology showing how the evolving practice of CSE can lead to a more unified theory and 3 a complex systems CSs initiative for organizations to invest some of their resources toward helping to make the world a better place A wide variety of technical practitioners e g developers of new or improved systems particularly systems engineers program and project managers associated staff workers funders and overseers government executives military officers systems acquisition personnel contract specialists owners of large and small businesses professional society members and CS researchers may be interested in further exploring these topics Readers will learn more about CS characteristics and behaviors and CSE principles and will therefore be able to focus on techniques that will better serve them in their everyday work environments

in dealing with complexity The fundamental observation is that many systems inherently involve a deeper complexity because stakeholders are engaged in the enterprise This means that such CSs are more difficult to invent create or improve upon because no one can be in total control since people cannot be completely controlled Therefore one needs to concentrate on trying to influence progress then wait a suitable amount of time to see what happens iterating as necessary With just three chapters in this book it seems to make sense to provide a tutorial introduction that readers can peruse only as necessary considering their background and understanding then a chapter laying out the suggested artifacts and methodology followed by a chapter emphasizing worthwhile areas of application

The Temporalization of Time Mike Sandbothe, 2001 This book deals with the philosopher Martin Heidegger and the chemo physicist Ilya Prigogine two prominent advocates of pioneering time concepts in the 20th century Mike Sandbothe provides a trans disciplinary introduction to modern debate on the problem of time and also suggests how the basic tendencies in this debate might be pragmatically interlinked

Cooperating for Enhanced Survival in the Twenty-First Century Earl Willis, 2016-08-10 In Cooperating for Survival in the Positive Sum Universe Earl Willis proposed that the universe is actually causal and positive sum This stance doesnt mesh with current scientific theories but he argues we need to look at the universe in a new way In this companion to his first book Willis elaborates on his theory that the universe is real rational and causal and under that basis he proposes the theory of contropy This theory builds upon Darwins theory of evolution and further describes the evolutionary process to offer a new view of the world It provides a simpler and more accurate description of reality than prevailing views Willis argues that his theory explains the dichotomy of perspectives between many reasonable intelligent people regarding political economic and even religious issues These differences all hinge on whether someones fundamental point of view is individualistic or collectivist Get ready to explore the philosophical political and economic implications of the theory of contropy and find out how we can work toward a more

positive future by Cooperating for Enhanced Survival in the Twenty First Century Peirce Mattering Dorothea Sophia, 2023-03-20 Mattering is the process and product of reality It is one from nothing Using Charles Sanders Peirce's systematic method of inquiry Dorothea Sophia explores the meaning the value and the consequences of mattering to be able to say beyond reasonable doubt it matters and that being on an evolving developing telos it is mattering Peirce Mattering Value Realism and the Pragmatic Maxim develops a three part hypothesis of mattering value functions as a condition of intelligibility purpose as the ground of mattering is dependent on value power the capacity to cause is the enabler of force functioning as actual mattering and mattering is evolutionary realization of universal telos This book argues that championing one's rights with disregard for consequences even for probabilities and disowning responsibility has come to mean that choice the hallmark of human freedom is increasingly circumscribed as are our chances of saving our world from ecocide

Methods, Models, Simulations And Approaches Towards A General Theory Of Change - Proceedings Of The Fifth National Conference Of The Italian Systems Society Gianfranco Minati, Mario Abram, Eliano Pessa, 2012-03-27 The book contains the Proceedings of the 2010 Conference of the Italian Systems Society Papers deal with the interdisciplinary study of processes of changing related to a wide variety of specific disciplinary aspects Classical attempts to deal with them based on generalising approaches used to study the movement of bodies and environmental influence have included ineffective reductionistic simplifications Indeed changing also relates for instance to processes of acquisition and varying properties such as for software growing and aging biological systems learning cognitive systems and socio economic systems growing and developing through innovations Some approaches to modelling such processes are based on considering changes in structure e.g. phase transitions Other approaches are based on considering 1 periodic changes in structure as for processes of self organisation 2 non periodic but coherent changes in structure as for processes of emergence 3 the quantum level of description Papers in the book study the problem considering its transdisciplinary nature i.e. systemic properties studied per se and not within specific disciplinary contexts The aim of these studies is to outline a transdisciplinary theory of change in systemic properties Such a theory should have simultaneous corresponding and eventually hierarchical disciplinary aspects as expected for a general theory of emergence Within this transdisciplinary context specific disciplinary research activities and results are assumed to be mutually represented as within a philosophical and conceptual framework based on the theoretical centrality of the observer and conceptual non separability of context and observer related to logically open systems and Quantum Entanglement Contributions deal with such issues in interdisciplinary ways considering theoretical aspects and applications from Physics Cognitive Science Biology Artificial Intelligence Economics Architecture Philosophy Music and Social Systems
