Developmental Aspects of Health Compliance Behavior Norman A. Krasnegor,Leonard Epstein,Suzanne B. Johnson,Sumner J. Yaffe,Leonard H. Epstein,2013-05-13 While in the late 1970s and early 1980s health compliance research on adults represented a vigorous field of study a marked decline of interest on the topic set in during the last part of the 1980s By contrast research on health compliance involving pediatric populations was less popular during the same period however interest in this topic as evidenced by the contributions to this volume is on the increase Four main themes relating to theory measurement prevention and intervention emerge and are interwoven among the chapters These themes help to bind and unify the volume into a conceptual whole because although the sections are divided along thematic lines contributors often include elements of some or all of the themes in their chapters This state of affairs reflects the

interdependence of these thematic issues and suggests how important they are for the state of the art The Oxford Handbook of Positive Psychology and Disability Michael L. Wehmeyer, 2013-07-25 Roughly 54 million people with disabilities live in the U S and there are many more millions of people with disabilities around the world Not surprisingly differences among and between people with disabilities are often as notable as differences between people with and without disabilities And while the lack of homogeneity among people with disabilities makes creating a valid taxonomy under this term difficult if not impossible there is commonality among and between people with disabilities that justifies an authoritative resource on positive psychology and disability That is they have experienced discrimination and marginalization as a function of their disability This volume assembles chapters by leading scholars in the fields of disability and positive psychology to provide a comprehensive synthesis of the state of the field of positive psychology and disability Chapters are organized into thematic sections beginning with an introductory section providing information on overarching themes in positive psychology and disability The second section highlights the application of positive psychological constructs to disability including quality of life self determination adaptive behavior optimism hope problem solving forgiveness gratitude and spirituality The following section addresses systemic issues in disability that impact positive psychology again turning to disciplines beyond just psychology special education rehabilitation sciences family and disability policy to address areas in which positive psychology can be applied A fourth section examines positive psychology in specific disabled populations including physical disabilities cognitive and developmental disabilities severe multiple disabilities emotional and behavioral disabilities and autism spectrum disorders Disability has always been associated with differentness and consequently people with disabilities have throughout time been treated as such As the first handbook to consider disability from a strengths based perspective this volume provides a catalyst to accelerate the application of positive psychology with regard to how disability is understood

Mithaug, Martin Agran, James E. Martin, Michael L. Wehmeyer, 2002-12-18 This volume brings together four semi autonomous bodies of research choice self determination self regulation and self management to form a new theory of self engaged learning

entitled Self Determined Learning Theory This theory explains why and how students self engage It identifies the factors that give students the sense of control over their learning that is needed for sustained adaptive and ultimately successful learning It begins by describing the characteristics of disengaged learners then describes and illustrates self determined learning theory within both normal and special populations It then examines the theory s predictive value across several special population contexts and then concludes with a critique of the theory s credibility and worth Divided into three sections theory construction theory verification and theory evaluation this volume is organized using the four steps of a previous book Learning to Theorize A Four Step Strategy Step 1 defines a problem of not understanding something as discrepancy between what is known and not known about a circumstance Step 2 searches for information and explanations to change the condition of not knowing into a condition of knowing Step 3 evaluates the credibility and worth of the explanation constructed in Step 2 Step 4 adjusts existing beliefs so they are consistent with the new theory Although aimed primarily at leaders in special education it should also appeal to researchers and scholars in psychology educational psychology and school psychology who are interested in the applications of self regulated learning theory in this case to special populations
