Selfsteering And Cognition In Complex Systems:

Self-steering and Cognition in Complex Systems Francis Heylighen, Eric Rosseel, Frank Demeyere, 1990 In the on going philosophical debate between cognitivism and radical constructivism the pervading notions of self reference self organization self steering autonomy etc are at the forefront of discussion These multidisciplinary papers from a symposium on title held in May 1987 examine these topics in depth and illustrate their applications Taken as a whole they provide insight into the emergence of a new cybernetics Book club price 34 Annotation copyrighted by Book News Inc Portland OR

Self-Modifying Systems in Biology and Cognitive Science G. Kampis, 2013-10-22 The theme of this book is the self generation of information by the self modification of systems The author explains why biological and cognitive processes exhibit identity changes in the mathematical and logical sense This concept is the basis of a new organizational principle which utilizes shifts of the internal semantic relations in systems There are mathematical discussions of various classes of systems Turing machines input output systems synergetic systems non linear dynamics etc which are contrasted with the author s new principle The most important implications of this include a new conception on the nature of information and which also provides a new and coherent conceptual view of a wide class of natural systems This book merits the attention of all philosophers and scientists concerned with the way we create reality in our mathematical representations of the world and the connection those representations have with the way things really are **Self-Producing Systems** John Mingers, 2013-11-21 John Mingers new volume *Self Producing Systems Implications and Applications of Autopoiesis* is a much needed reference on autopoiesis a subject penetrating many disciplines today I can genuinely say that I enjoyed reading the book as it took me stage by stage through a clear and easy to grasp understanding of the concepts and ideas of auto poiesis and then as the book s title suggests on through their applica tions I found the summary in Chapter 12 particularly useful helping to crystalize the main points of each chapter The book conveyed enthusi asm for the subject and stimulated my interest in it At times the book is demanding but only because of the breadth of the subject matter the terms and concepts associated with its parts and the challenge of keep ing hold of all this in the mind at once This is an exceptional text ROBERT L FLOOD Hull UK Preface In recent years Maturana s and Varela s concept of autopoiesis origi nally a biological concept has made a remarkable impact not just on a single area but across widely differing disciplines such as sociology policy science psychotherapy cognitive science and law Put very briefly the term autopoiesis connotes the idea that certain types of sys tems exist in a particular manner they are self producing systems In their operations they continuously produce their own constituents their own components which then participate in these same production pro cesses

Nature, Cognition and System II M.E. Carvallo, 2013-03-07 is both a player and a spectator is explained here illuminatingly With regard to logical ambiguities and paradoxes which may show up in all these topics he like Locker is of the opinion that philosophically speaking all apory of a lower level have to be accepted an a higher level of thinking After the

above expositions of a more general purport we turn now to two contributions which are particularly focused on Bohr's concept of complementarity. First is the article of Hilgevoord who briefly and non-technically describes a short curriculum vitae of the concept beginning with Planck through Bohr to Heisenberg and Schrodinger. Included in this short story of course is the famous wave-particle duality and the paradox inherent in it; many physicists are still saddled with how this paradox was solved is explained here simply and clearly: first generally by quantum mechanics where the disturbance theory of measurement was supposed to be of some relevance and secondly where this theory is further refined leading to Bohr's conclusion of the essential unsolvability and accordingly the completeness of the statistical element of quantum mechanics. The reading of this short article may arouse questions and surmises whether complementarity has been ruminated by Bohr to tame the law of excluded middle, dividing the well-defined content of position measurement from that of momentum measurement; just to mention one: Whatever it may be, the idea of complementarity betrays the perplexity of the observing system in dealing with nature's complexity.

Systemic Actions in Complex Scenarios James Ming Chen, Edit Fabó, Emilia Ferone, 2017-08-21. What is the contribution of General System Theory to the macro-level understanding of economic, social and technological changes in our epoch from a multidimensional perspective? What is the contribution of Social Action Theory on a micro-scale? Can complex scenario analyses, although based upon uncertainty and unpredictability, offer a viable toolkit for managing these transformations? This book contains twelve chapters dealing with these questions from various points of view. It brings together essays in sociology, economics, law and humanities to provide as complete a representation as possible of the current global situation. The theoretical framework adopted here is that the systemic approach provides the most effective tool both for understanding social phenomena and elaborating policy modelling strategies for decision makers that are supposed to tackle social criticalities.

Self-Organization and Clinical Psychology Wolfgang Tschacher, Günter Schiepek, Ewald J. Brunner, 2012-12-06. Self-organization and clinical psychology signals the advent of a new paradigm in psychology. Physicists, neuroscientists and individual and group therapists have joined forces to elucidate the new and exciting advances that are being achieved by applying the concepts of non-linear dynamics and self-organization to the human nervous system and the mind.

Parallelism, Learning, Evolution J.D. Becker, I. Eisele, F.W. Mündemann, 1991-12-04. This volume presents the proceedings of a workshop on evolutionary models and strategies and another workshop on parallel processing logic, organization and technology, both held in Germany in 1989. In the search for new concepts relevant for parallel and distributed processing, the workshop on parallel processing included papers on aspects of space and time, representations of systems, non-Boolean logics, metrics, dynamics and structure, and superposition and uncertainties. The point was stressed that distributed representations of information may share features with quantum physics such as the superposition principle and the uncertainty relations. Much of the volume contains material on general parallel processing machines, neural networks and system-theoretic aspects. The material on evolutionary strategies is included because these

strategies will yield important and powerful applications for parallel processing machines and open the way to new problem classes to be treated by computers

The New Science of Radical Innovation Sunnie Giles, 2018-04-10 Discover a groundbreaking science-based approach to leadership that catalyzes radical innovation for dramatic and permanent results. Today's business environment is undergoing a revolutionary transformation defined by extraordinary levels of VUCA: volatility, uncertainty, complexity, and ambiguity. But most traditional companies are still built for the old world economy when the new mandate from VUCA requires a fresh leadership approach. Dr. Sunnie Giles is a new generation expert on radical innovation who takes the mystery out of what radical innovation is and transforms organizations into ones fit to deliver radical innovation. Her in-depth research reveals that applying concepts from neuroscience, complex systems approach, and quantum mechanics can help leaders catalyze radical innovation rapidly. Giles's breakthrough leadership development program called Quantum Leadership is the key to survival in the today's VUCA market with huge consequences for organizations' bottom lines. *The New Science of Radical Innovation* provides profound insights and actionable tools to help you accelerate the speed of execution, balance between team cohesion and self-organization, and tap into the power of collective wisdom. Inside, discover how to develop the six leadership competencies you need to catalyze radical innovation in your organization: Self Management, Providing Safety, Creating Differentiation, Strengthening Connection, Facilitating Learning, Stimulating Radical Innovation. This book will help you redefine how value is created in your industry.

Information and Computation Mark Burgin, Gordana Dodig Crnkovic, 2011 This volume provides a cutting edge view of the world's leading authorities in fields where information and computation play a central role.

Systems Thinking, Critical Realism and Philosophy John Mingers, 2014-04-24 *Systems Thinking, Critical Realism and Philosophy: A Confluence of Ideas* seeks to re-address the whole question of philosophy and systems thinking for the twenty-first century and provide a new work that would be of value to both systems and philosophy. This is a highly opportune time when different fields critical

realism philosophy of science and systems thinking are all developing around the same set of concepts and yet not realizing it. This book will be of interest to the academic systems community worldwide and due to its interdisciplinary coverage it will also be of relevance to a wide range of scholars in other disciplines particularly philosophy but also operational research information systems and sociology.

New Perspectives on Cybernetics G. Vijver, 2013-06-29. Gertrudis Van de Vijver Seminar of Logic and Epistemology, University of Ghent. Before being classified under the fashionable denominators of complexity and chaos, self-organization and autonomy were intensely inquired into in the cybernetic tradition. Despite all rejections that cybernetics has gone through in the second half of this century, today its importance is more and more recognized. Its decisive influence for connectionist theories, autopoietic and constructivist theories for different forms of applied or experimental epistemology is being more and more understood and generally accepted. It is mainly due to the success of connectionist models that we observe today a revival of interest for cybernetics. The 1943 article by McCulloch and Pitts is evidently a founding article. Cybernetics has however a much broader interest than the one linked to technical mathematical details relevant to the construction of networks. For instance, the evolution from first to second order cybernetics, the ways of approaching biological and cognitive phenomena in the latter and the limits that were formulated there are particularly meaningful to understand current developments and divergences in connectionism. A nuanced picture of cybernetics' history and its present state is therefore clearly epistemologically essential.

New Directions in Cognitive Information Retrieval Amanda Spink, Charles Cole, 2006-08-25. *New Directions in Cognitive Information Retrieval* presents an exciting new direction for research into cognitive oriented information retrieval. IR research, a direction based on an analysis of the user's problem situation and cognitive behavior when using the IR system. This contrasts with the current dominant IR research paradigm which concentrates on improving IR system matching performance. The chapters describe the leading edge concepts and models of cognitive IR that explore the nexus between human cognition, information and the social conditions that drive humans to seek information using IR systems. Chapter topics include: Polyrepresentation, cognitive overlap and the boomerang effect, Multitasking while conducting the search, Knowledge Diagram Visualizations of the topic space to facilitate user assimilation of information, Task relevance selection, state knowledge, need and knowledge behavior, search training built into the search, children's collaboration for school projects and other cognitive perspectives on IR concepts and issues.

Suggestion and Suggestibility Vladimir A. Gheorghiu, Petra Netter, Hans J. Eysenck, Robert Rosenthal, 2012-12-06. This book contains the proceedings of the First International Symposium on Suggestion and Suggestibility held at the University of Giessen in the Federal Republic of Germany, July 7-11, 1987, upon the initiative of and organized by Dr V A Gheorghiu and Dr P Netter. I regret that for personal reasons I was unable to accept his kind invitation to attend. Dr Gheorghiu and I are old friends. I am pleased however to

have this opportunity to call attention to the significance of this volume Most of the chapters were presented in approximately their present form at the symposium though some have been extensively revised for publication It was a wise choice to divide the papers into four major sections I Theoretical and Historical Perspectives II Assessment and Individual Differences of Suggestibility III Psychophysiological Aspects of Suggestibility and IV Social and Cognitive Aspects of Suggestive Processes each with a summarizing commentary In view of the variety and difficulty of the individual papers it is a help to have the integration provided by these commentaries on Part I by Sheehan Chap 7 on Part II by Lundy Chap 13 on Part III by Edmonston Chap 19 and on Part IV by Fiedler Chap 30 *Functional Modeling of Systems* Edward N. Baylin,1990 Introduces some new paradigm variations providing a general systems approach applicable to all phases of system definition and all types and levels of systems This conceptual prototyping approach calls into question the common assumption of information systems modelers that the data have a more stable structure than the procedures functions The new concepts are accompanied by a structure flow chart which combines the features of various charting methods and captures many aspects of systems that other methods miss Annotation copyrighted by Book News Inc Portland OR Quest For A Unified Theory Wolfgang Hofkirchner,2013-10-15 First published in 1999 Volume 13 in the 13 volume set titled World Futures General Evolution Studies with a common focus of the emerging field of general evolutionary theory This volume will expand across disciplines where scholars from new fields will contribute books that propose general evolution theory in novel contexts The essays are structured with five topics Approaches to Unification Concepts of Information Self Organizing Systems Life and Consciousness Society and Technology Self-Organization in Psychotherapy Arno L. Goudsmit,2012-12-06 This book presents self organization as a common theoretical foundation for a variety of therapy styles New models and conceptual tools that describe and explain some of the crucial features of psychotherapy are discussed In contrast to other highly theoretical and technical discussions of the subject this book gives a wider audience an understanding of recent developments **Social Science Microsimulation** Klaus G. Troitzsch,1996-09-17 This book gives an overview of the state of the art in five different approaches to social science simulation on the individual level The volume contains microanalytical simulation models designed for policy implementation and evaluation multilevel simulation methods designed for detecting emergent phenomena dynamical game theory applications the use of cellular automata to explain the emergence of structure in social systems and multi agent models using the experience from distributed artificial intelligence applied to special phenomena The book collects the results of an international conference which brought together social scientists and computer scientists both engaged in a wide range of simulation approaches for the first time
