Virtual Equivalent System Approach for Stability Analysis of Model-based Control Systems Weicun Zhang, Qing Li, 2020-06-05 This book puts forward the concept of a virtual equivalent system VES based on theoretical analysis and simulation results The new concept will facilitate the development of a unified framework for analyzing the stability and convergence of self tuning control STC systems and potentially of all adaptive control systems The book then shows that a time varying STC system can be converted into a time invariant system using a certain nonlinear compensation signal which reduces the complexity and difficulty of stability and convergence analysis In closing the VES concept and methodology are used to assess the stability of multiple model adaptive control MMAC systems and T S model based fuzzy control systems
