Death of a Gene Gary B. Boyd, 2014-04-23 Rodney Miller was just the tip of the iceberg Festering in his tortured mind was the depravity that defined him and his progeny for generations to come His genetic code was written to be read in the annals of history His sister Mary Miller was less tortured but possessive of the same malevolent genetics Though separated by circumstance her offspring and his were destined to corrupt the human genome and meet in a climactic battle of evil wills Only Divine Providence could unravel the double helix and erase the error before irreparable damage could be done to the human race

Understanding and Developing Science Teachers'

Pedagogical Content Knowledge John Loughran, Amanda Berry, Pamela Mulhall, 2012-07-31 There has been a growing interest in the notion of a scholarship of teaching. Such scholarship is displayed through a teacher's grasp of and response to the relationships between knowledge of content teaching and learning in ways that attest to practice as being complex and interwoven. Yet attempting to capture teachers' professional knowledge is difficult because the critical links between practice and knowledge for many teachers is tacit. Pedagogical Content Knowledge (PCK) offers one way of capturing, articulating, and portraying an aspect of the scholarship of teaching, and in this case the scholarship of science teaching. The research underpinning the approach developed by Loughran, Berry, and Mulhall offers access to the development of the professional knowledge of science teaching in a form that offers new ways of sharing and disseminating this knowledge. Through this Resource Folio approach comprising CoRe and PaP eRs, a recognition of the value of the specialist knowledge and skills of science teaching is not only highlighted but also enhanced. The CoRe and PaP eRs methodology offers an exciting new way of capturing and portraying science teachers' pedagogical content knowledge so that it might be better understood and valued within the profession. This book is a concrete example of the nature of scholarship in science teaching that is meaningful, useful, and immediately applicable in the work of all science teachers, preservice, in-service, and science teacher educators. It is an excellent resource for science teachers as well as a guiding text for teacher education. Understanding teachers' professional knowledge is critical to our efforts to promote quality classroom practice. While PCK offers such a lens, the construct is abstract. In this book, the authors have found an interesting and engaging way of making science teachers' PCK concrete, useable, and meaningful for researchers and teachers alike. It offers a new and exciting way of understanding the importance of PCK in shaping and improving science teaching and learning. Professor Julie Gess Newsome, Dean of the Graduate School of Education, Willamette University. This book contributes to establishing CoRes and PaP eRs as immensely valuable tools to illuminate and describe PCK. The text provides concrete examples of CoRes and PaP eRs completed in real-life teaching situations that make stimulating reading. The authors show practitioners and researchers alike how this approach can develop high-quality science teaching. Dr. Vanessa Kind, Director, Science Learning Centre, North East School of Education, Durham University.
