Hidden World of Microbes investigates the complex life of a man who revolutionized our understanding of disease. Alongside Pasteur's pioneering work with microorganisms, his innovative use of heat to kill harmful organisms in food, a process now known as pasteurization, and his development of the rabies vaccine, Louise Robbins places Pasteur in the context of his risky scientific methods and his rigid family and political beliefs. Robbins reveals a man of genius with sometimes troubling convictions. Louis Pasteur and the Hidden World of Microbes is a fascinating look at one of the most important scientific minds of the last two centuries.

Louis Pasteur Linda Wasmer Smith, 2007-07-01 Presents a biography of the noted French scientist whose discoveries, including a rabies vaccine and the process of pasteurization, had important practical applications in both medicine and industry.

Eurekas and Euphorias Walter Gratzer, Walter Bruno Gratzer, 2004 The march of science has never proceeded smoothly. It has been marked through the years by episodes of drama and comedy, of failure as well as triumph, by outrageous strokes of luck, deserved and undeserved, and sometimes by human tragedy. It has seen deep intellectual friendships as well as ferocious animosities, and once in a while acts of theft and malice, deceit, and even a hoax or two. Scientists come in all shapes: the obsessive and the dilettante, the genial and the envious, the preternaturally brilliant and the slow-witted, who sometimes see further in the end, the open-minded and the intolerant, the recluses and the arrivistes. From the death of Archimedes at the hands of an irritated Roman soldier to the concoction of a superconducting witches' brew at the very close of the twentieth century, the stories in *Eurekas and Euphorias* pour out, told with wit and relish, by Walter Gratzer. Open this book at random and you may chance on the clumsy chemist who breaks a thermometer in a reaction vat and finds mercury to be the catalyst that starts the modern dyestuff industry, or a famous physicist dissolving his gold Nobel Prize medal in acid to prevent it from falling into the hands of the Nazis, recovering it when the war ends, mathematicians and physicists diverting themselves in prison cells and even in a madhouse by creating startling advances in their subject. We witness the careers, sometimes tragic, sometimes carefree, of the great women mathematicians from Hypatia of Alexandria to Sophie Germain in France and Sonia Kovalevskaya in Russia and Sweden, and then Marie Curie's relentless battle with the French Academy. Here, then, a glorious parade unfolds to delight the reader, with stories to astonish, to instruct, and most especially to entertain.

On Science Tuhina Ray,Urmie Ray,2020-12-20 *On Science* Concepts Cultures and Limits explores science and its relationship with religion philosophy ethics mathematics and with socio economic changes The book gives an overview of the metaphysical contexts in which science emerged and the particular forms science has taken in history It examines the preoccupation of ancient cultures with the validity of interpretations of natural phenomena the role of the study of materials in the substantiation of the conceptual world and the establishment of modern science on both experimentation and mathematics This theoretical discussion is illustrated by a host of examples from physics to the life sciences which highlight how current concepts developed over the centuries or even millennia The volume underscores some of the weaknesses inherent in a scientific approach and how in the modern context of a wealth driven technological orientation these have been conducive to a gradual distortion of science into its exact opposite a dogmatic faith It further discusses the nature of scientific education in the world and how conditions can be created to ensure pioneering creativity and to preserve scientific rigor The book will be of great interest to scholars teachers and researchers of science the metaphysics and philosophy of science mathematics science and technology studies epistemology ethics history and sociology It will also be useful for general readers who are interested in the history of scientific discoveries and ideas as well as in the issues surrounding science today in particular its relations with many urgent problems

The Story of Chemistry N. C. Datta,2005 Chemistry touches every aspects of our life but we are largely ignorant of it A general reader has access to many popular books in the various areas of physics and astornomy but in the area of chemistry there is virtually no accessible material One common perception is that chemistry is a difficult subject which is partially true

Facing Gaia Bruno Latour,2017-09-05 The emergence of modern sciences in the seventeenth century profoundly renewed our understanding of nature For the last three centuries new ideas of nature have been continually developed by theology politics economics and science especially the sciences of the material world The situation is even more unstable today now that we have entered an ecological mutation of unprecedented scale Some call it the Anthropocene but it is best described as a new climatic regime And a new regime it certainly is since the many unexpected connections between human activity and the natural world oblige every one of us to reopen the earlier notions of nature and redistribute what had been packed inside So the question now arises what will replace the old ways of looking at nature This book explores a potential candidate proposed by James Lovelock when he chose the name Gaia for the fragile

complex system through which living phenomena modify the Earth. The fact that he was immediately misunderstood proves simply that his readers have tried to fit this new notion into an older frame, transforming Gaia into a single organism, a kind of giant thermostat, some sort of New Age goddess or even divine Providence. In this series of lectures on natural religion, Bruno Latour argues that the complex and ambiguous figure of Gaia offers, on the contrary, an ideal way to disentangle the ethical, political, theological, and scientific aspects of the now obsolete notion of nature. He lays the groundwork for a future collaboration among scientists, theologians, activists, and artists as they and we begin to adjust to the new climatic regime.
