In recent decades it has become increasingly urgent to protect human health and wellbeing from the possible negative consequences of man's economic activities both at the actual production sites and in areas where the impact is felt. These negative effects have gradually become more and more widespread, presenting a major hazard to the natural environment, taking on an international character and assuming global proportions. For the countries of Europe and North America, transport of pollutants and acid rain across boundaries is a serious problem. After the Chernobyl reactor accident, regular measurements of radioactive isotopes became imperative. It is obvious that drastic measures, including steps taken on an international level, are required to limit the negative anthropogenic impact on the environment. Under the conditions of this growing man-caused impact on nature, the existing ecological reserves of the biosphere should be husbanded especially carefully. We must determine the regimes of rational utilization of these reserves and of judicious management of the natural environment, thereby maintaining a high quality of the biosphere and preserving nature's regenerative capacity. Reliable methods should be developed to keep the environment from being overloaded and to safeguard the elements of the biosphere from injury. Given such a situation, it is of particular importance to have objective information about the critical factors of the human impact and the actual state of the biosphere, as well as to obtain forecasts of its future state.

Man and His Environment M. F. Mohtadi, 2013-10-22

Man and His Environment Volume 2 covers the proceedings of the Second International Banff Conference of Man and His Environment held in Banff Springs Hotel, Alberta, Canada, on May 19-22, 1974. The conference addresses the broad environmental issues in relation to man and his natural environment. This book is organized into six sessions encompassing 17 chapters. The first session deals with the continuing development of the Canadian mineral resources and the role of the National Energy Board in the country's energy management. This session also provides an overview of the world hydrocarbon energy resources. The second session discusses various problems in overpopulated and industrially and technologically underdeveloped countries and developments in the environmental restraints on production practices to protect the environment. The subsequent two sessions look into the effects of human activities on his environment. Topics covered in these sessions include the use and misuse of technology, social, economic and political impact of urbanization and government environmental policies. The concluding sessions outline the ethical structure of Western Society and the development of a theoretical model of public morality. These topics are followed by discussions on the essential nature of the environmental problems and the systematic relations between the Western culture and Western environment.

Humans and Their Environment, Beyond the Nature/Culture Opposition Claude Calame, 2023-04-10

The modern concept of nature appeared during the 17th Century, nature as a

mechanical object to be submitted to reason man A long tradition refers to the concept of nature in the Greek physis It is referring to a dynamic process that engages in criticizing the modern paradigm of nature as opposed to culture As it is the principle of the domination and exploitation by humans of what we consider as nature is at the heart of the ideological economic and financial models imposed by neoliberal capitalism Based on the objective of growth this model shapes and destroys human communities as well as the environment on which they rely and sustain The climatic urgency as well as the limited capacity of the resources of the earth require a transition towards an ecosocialism for another world The anthropological confrontation with the Greek physis invites to a break with capitalism based on a large scale and speedy use of technologies and with the only objective of financial gain The result has been destructive productivism Instead we have to take into account the complexity of and interactions between human societies and their technical practices in their environment The survival of one or the other is at stake In sum nature is culture Contents Preface to the English Edition 3 Introduction 9 Between Nature and Culture 15 I Humans and Their Milieu in Ancient Greece 19 II From the Enlightenment Philosophers to Modern Anthropologists 37 III Beyond Anthropological Determinisms Permeabilities 47 IV The Human Being and its Environment Interactive Relationships 57 V For an Ecosocialist Understanding of Humans and their Milieu 65 *Life Energies, Forces and the Shaping of Life: Vital, Existential* Anna-Teresa Tymieniecka, 2002-08-31 The nature of life consists in a constructive becoming see *Analecta Husserliana* vol 70 Though caught up in its relatively stable stationary intervals manifesting the steps of its accomplishments that our attention is fixed In this selection of studies we proceed in contrast to envisage life in the Aristotelian perspective in which energia forces and dynamisms of life at work are at the fore Startling questions emerge what distinction could be drawn between the prompting forces of life and its formation Or is this distinction a result of our transcendental faculties The answers to these questions reveal themselves as Tymieniecka proposes at the phenomenologically onto-poietic level of life's origination where transcendentality surges *Logos of Phenomenology and Phenomenology of The Logos.
