Time-Dependent Behaviour of Concrete Structures Raymond Ian Gilbert, Gianluca Ranzi, 2010-09-15 Serviceability failures of concrete structures involving excessive cracking or deflection are relatively common even in structures that comply with code requirements This is often as a result of a failure to adequately account for the time dependent deformations of concrete in the design of the structure The serviceability provisions embodied in Exceptional Technologies Dominic Smith, 2018-08-23 A discussion of the rapidly growing field from a thinker at the forefront of research at the interface of technology and the humanities this is a must read for anyone interested in contemporary developments in Continental philosophy and philosophy of technology Philosophy of technology regularly draws on key thinkers in the Continental tradition including Husserl Heidegger and Foucault Yet because of the problematic legacy of the empirical turn it often criticizes bad continental tendencies lyricism pessimism and an outdated view of technology as an autonomous transcendental force This misconception is based on a faulty image of Continental thought and in addressing it Smith productively redefines our concept of technology By closely engaging key texts and by examining exceptional technologies such as imagined failed and impossible technologies that fall outside philosophy of technology s current focus this book offers a practical guide to thinking about and using continental philosophy and philosophy of technology It outlines and enacts three key characteristics of philosophy as practiced in the continental tradition close reading of the history of philosophy focus on critique and openness to other disciplinary fields Smith deploys the concept of exceptional technologies to provide a novel way of widening discussion in philosophy of technology navigating the relationship between philosophy of technology and Continental philosophy the history of both these fields the role of imagination in relation to technologies and the social function of technologies themselves *Sustainability in Structural Concrete Design* Jorge de Brito, Rui Vasco Silva, 2024-05-06 Sustainability in construction is a priority for both academia and industry to reduce the carbon footprint of

the built environment and thus combat climate change Numerous approaches have been developed on how to tackle this issue wherein the implementation of eco efficient concrete is currently considered one of the most effective measures to be applied at the beginning of a building's life cycle This edition of the Structural Engineering Document discusses key issues in selecting and incorporating eco efficient waste materials capable of enhancing the sustainability of structural concrete in construction projects The cost efficiency of using recycled aggregates in structural concrete is shown by several world renowned researchers Critical evaluations and case studies further highlight the properties and performance of these materials and in various structural applications Also novel low impact binding systems using industrial by products showcase the importance of continuous research for technically viable alternatives capable of decreasing the huge dependency on ordinary Portland cement The purpose of this document is to contribute to a broader understanding of the many possibilities for the development of a more sustainable structural concrete thereby fostering resilient and sustainable construction practices to support the global commitment to environmental responsibility
