Management Of Essential Hypertension The New Low Dose Era:

Management of Essential Hypertension Francis Gilbert McMahon, 1978 *Management of Essential Hypertension* Francis Gilbert McMahon, 1984 *Prevention in Clinical Practice* D.H. Becker, L.B. Gardner, 2012-12-06 Prevention of disease and injury including early identification of risks and disease and optimal control of potentially debilitating or fatal complications of chronic conditions is the area of clinical medicine that holds the greatest promise for improving human health Each year a long list of major but potentially preventable health problems exacts a terrible human and financial toll These problems urgently need our attention especially as major advances in curative medicine become more complex and costly Prevention of disease and injury may well be the central health issue of our time an issue of vital concern to every quarter of our society Now is a very good time to promote prevention Citizens and some social groups are increasingly aware of and interested in health and fitness issues There is great enthusiasm about even obsession with health and we are seeing an astonishing proliferation of health publications and media presentations for laymen fitness and weight control centers exercise programs health food stores disease support groups health education programs and do it yourself diagnostic kits All of this betokens an increased health consciousness on the part of public and perhaps signals greater individual accountability for health

National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1985 *Gerontology* Dieter Platt, 2012-12-06 At the beginning of the century the average life span in developed societies was less than 50 years It is now more than 70 years and will continue to increase in the near future Aging is a challenge to science and society There are several theories of aging The programmed aging hypothesis suggests that aging cannot be altered by any external influence that aging is programmed from the beginning of life until the end of senescence Another theory is based on genetic instability with repair processes correcting errors in the cells that cause aging Aging processes manifest themselves at the molecular and cellular level in different organs and in the whole organism Most older persons acquire multiple diseases primarily chronic ones The multimorbidity of the elderly raises many questions as to nutrition metabolism immunity drug therapy and rehabilitation Nutrition may be able to intervene in the aging process Aging is associated with declining immunity and reduced resistance to many diseases and it is possible that nutritional changes in old age contribute to the declining immunity in the elderly The elderly take 40% of the prescription drugs in Germany and adverse drug reactions are more frequent in geriatric patients There are not only problems in drug therapy for elderly patients but also in their rehabilitation The aim of rehabilitation is the restoration of geriatric patients to their former functional and environmental status

Topics in Clinical Pharmacology and Therapeutics Robert F. Maronde, 2012-12-06 Dr Maronde has performed a major service in bringing together a superb array of scholars and clinicians to discuss not only the basic principles in therapeutics and clinical pharmacology but also the application of those principles to a wide range of clinical problems Inclusion of chapters on adverse drug reactions drug overdose nonmedical prescription drug use physician prescribing

patterns and the pharmaceutical industry makes this a particularly valuable book for clinicians. It is increasingly important that clinicians be well grounded in the principles of pharmacodynamics and pharmacokinetics because more and more of our patients are aging and cannot be treated as young or middle aged adults. Elderly patients are liable to either drug overdose or underdose if traditional dosage formulas are followed because of changes in drug metabolism, drug distribution within the body, drug excretion or changes in receptor site sensitivity. Because the elderly often present with multiple chronic diseases and require a variety of medications they are more prone to medication errors, drug drug interactions and adverse drug reactions. The inclusion of three excellent chapters relating to drug drug interactions, adverse drug reactions and drug overdose is most welcome and is a valuable addition to this outstanding text on therapeutics and clinical pharmacology.

Adverse drug reactions present a potentially serious problem for any patient for whom drugs are prescribed and particularly for those who must take multiple prescriptions.

Current Catalog National Library of Medicine (U.S.), 1985. First multi year cumulation covers six years 1965-70. *Pharmacology of Antihypertensive Therapeutics* Detlev Ganten, Patrick J. Mulrow, 2012-12-06. The previous volume on Antihypertensive Agents in the Handbook of Experimental Pharmacology published in 1977 was edited by the late Franz Gross from the Department of Pharmacology in Heidelberg who was one of the grand old men in hypertension research. Now more than 10 years later it is necessary to update this volume. From the early days of antihypertensive drug treatment starting about 30 years ago with drugs such as reserpine and guanethidine the pharmacology of cardiovascular therapy has evolved into a highly sophisticated and effective therapeutic regimen. The major breakthroughs in the 1960s were the introduction of diuretics and beta blockers. Then in the 1980s came the calcium antagonists and converting enzyme inhibitors. It can be anticipated that the next decade will see a further expansion and sophistication of blood pressure lowering drugs. This book provides a state of the art discussion of chemical, experimental and clinical pharmacological data as well as of practical experience with drugs which are presently being used or which are going to be introduced on the market in the near future. The purpose of this volume is to provide a complete discussion of antihypertensive agents. Each major class of antihypertensive drugs is treated exhaustively in a separate chapter fully referenced with chemical formulae and richly illustrated with figures and tables. International authorities were asked to contribute in their respective fields of expertise.
