A Multidisciplinary Analysis of Controversies in the Management of Prostate Cancer Donald S. Coffey, 2012-12-06 These proceedings emanate from the Second Prostate Neck Conference on prostate cancer held on October 17 19 1986 the theme of

which was treatment with focus on current issues and future research that is needed to answer critical questions related to optimal management of the various stages of prostate cancer. The objective was to reveal the most crucial problems impeding progress and to crystallize the combined multidisciplinary input generated by the conference into focused concepts or recommendations for presentation to the National Cancer Institute (NCI) with the ultimate intent of targeting research to address the priority issues identified. In organizing the workshop every effort was made to maintain a multidisciplinary balance among nationally renowned authorities on prostate cancer. Thus leading surgeons, radiation and medical oncologists and biostatisticians were in equal presence. While there were spirited exchanges with careful scrutiny and critique of all data presented, there was a common belief that the challenge of prostate cancer would be best approached in this multidisciplinary, organ systems oriented fashion. During the course of the conference it became apparent to all present that major nomenclature and procedural barriers have made it generally difficult and frequently impossible to compare results of clinical research.

controversial topics concerning the diagnosis and the treatment of HNSCC among its member institutions This survey was designed to discuss current diagnostic and treatment strategies for HNSCC of all localizations and to find out probable differences and level of consensus between the participating academic institutions by means of a questionnaire based pattern of care study The items in the survey was generated with a scored voting system by inclusion of all involved centers and divided into four sections each of them not exceeding twenty questions head and neck surgery radiation oncology medical oncology and biomarkers Surely the topics and questions were intentionally chosen from controversial areas Nonetheless the lack of major consensus in most queried areas provide an insight to head and neck oncologist in terms of the scope of heterogeneity in their practice Although none of the participated centers being plainly wrong it is still disturbing to see that a patient may be treated with quite discrepant diagnostic and treatment concepts even in a relatively small country adhering to up to date evidence based medicine We believe that this work will serve the head and neck oncologists to be aware of their discrepancies and to stimulate discussion toward standardization of practice and prioritize topics of future clinical research

Progress and Controversies in Oncological Urology II F. H. Schröder,1988 **Journal of the National Cancer Institute** ,1995 **Controversies in Uro-oncology** T. Wiegel,2002 This interdisciplinary approach is reflected in the broad scope of this volume which aims to provide an overview of current treatment strategies for bladder and prostate cancer The first part of the book discusses the optimization of radiation techniques like 3D planning or IMRT and focuses on definitive radiotherapy with or without adjuvant or neoadjuvant hormonal manipulation The quality of life after therapy is another important issue Further chapters deal with radical cystectomy and organ preservation by radio chemotherapy as well as the treatment of T1G3 cancer In the last part the emphasis lies on brachytherapy which has become increasingly important for the treatment of prostate cancer This book will be of great value to urologists and radiation oncologists as well as to all others involved in the care of patients with urologic cancer *Progress in Diagnostics and Therapy of Prostatic Cancer* W.B. Peeling,Hermann Becker,2012-12-06 There is now increasing awareness by the general public in European countries that prostate cancer is a serious threat to health and this has created higher expectations for improved and more effective methods for detecting and treating the disease However urologists are very conscious of the limitations of the diagnostic methods that are available and are even more concerned about the apparent lack of therapeutic advances made during the past 50 years since Huggins discovered the fundamental principles of endocrine treatment for is theo prostate cancer Recent efforts to detect the disease when it retically curable have been successful certainly in the USA but this has highlighted our uncertainty about the best treatment for early stage prostate cancer and there is no doubt that radical pro statectomy is sometimes carried out on men who may not be threa tened by their illness While it is generally accepted that many men with prostate cancer will die of old age rather than this malignancy it cannot be ignored that this disease kills many others in a process that is frequently lingering miserable and humiliating not only for the victim but also his family There are many

important issues about prostate cancer that remain unclear at the present time some of which are addressed by the reviews in this book The debate about early detection and screening can arouse considerable heat in otherwise placid urological meetings
