If you like this book write a review Flood Forecasting Using Machine Learning Methods Fi-John Chang,Kuolin Hsu,Li-Chiu Chang,2019-02-28 Nowadays the degree and scale of flood hazards has been massively increasing as a result of the changing climate and large scale floods jeopardize lives and properties causing great economic losses in the inundation prone areas of the world. Early flood warning systems are promising countermeasures against flood hazards and losses. A collaborative assessment according to multiple disciplines comprising hydrology remote sensing and meteorology of the magnitude and impacts of flood hazards on inundation areas significantly contributes to model the integrity and precision of flood forecasting. Methodologically oriented countermeasures against flood hazards may involve the forecasting of reservoir inflows river flows tropical cyclone tracks and flooding at different lead times and or scales. Analyses of impacts risks uncertainty resilience and scenarios coupled with policy oriented suggestions will give information for flood hazard mitigation. Emerging advances in computing technologies coupled with big data mining have boosted data driven applications among which Machine Learning technology with its flexibility and scalability in pattern

extraction has modernized not only scientific thinking but also predictive applications This book explores recent Machine Learning advances on flood forecast and management in a timely manner and presents interdisciplinary approaches to modelling the complexity of flood hazards related issues with contributions to integrative solutions from a local regional or global perspective
