Observation and Its Application to Social Work Pat Le Riche, Karen Tanner, 1998-01-01 Observation helps social workers and students to reflect upon situations before intervening The Tavistock Model of Observation which is informed by psychoanalytic ideas especially those of Klein and Bion is the starting point of this general book on the role of observation in social work Karen Tanner and Pat Le Riche have brought together a range of contributions from practitioners and social work academics in order to discuss the application of ideas about observation to social work education and practice While the Tavistock Model remains influential the writers draw on material from a number of other disciplines such as behavioural ethnography psychology and critical social policy on observation and social work The central theme of the book is that of power relations The authors focus on power in relation to the process of observation and how observation can be used to counteract oppressive and dehumanising practices Clearly and perceptively written the book develops the debate on the purposes of observation and provides an overview of current practice It will be of use to students and professionals alike

Control Systems Functions and Programming Approaches: Applications by Dimitris N Chorafas, 1966-01-01 In this book we study theoretical and practical aspects of computing methods for mathematical modelling of nonlinear systems A number of computing techniques are considered such as methods of operator approximation with any given accuracy operator interpolation techniques including a non Lagrange interpolation methods of system representation subject to constraints associated with concepts of causality memory and stationarity methods of system representation with an accuracy that is the best within a given class of models methods of covariance matrix estimation methods for low rank matrix approximations hybrid methods based on a combination of

iterative procedures and best operator approximation and methods for information compression and filtering under condition that a filter model should satisfy restrictions associated with causality and different types of memory As a result the book represents a blend of new methods in general computational analysis and specific but also generic techniques for study of systems theory and its particular branches such as optimal filtering and information compression Best operator approximation Non Lagrange interpolation Generic Karhunen Loeve transform Generalised low rank matrix approximation Optimal data compression Optimal nonlinear filtering

Progressive Decision-Making Tools and Applications in Project and Operation Management Mohammad Yazdi, 2024-03-07 In today's complex operational environments leveraging advanced decision making tools becomes imperative particularly in uncertain scenarios This book deepens the nuances of employing state of the art decision making methodologies within various industrial sectors for optimal project and operations management The essence of integrating these advanced tools is to equip professionals with pivotal insights for cost effective management and to strategize against potential operational shortcomings Furthermore the methodologies elucidated provide a robust foundation for crafting informed risk centric strategies that uphold the integrity of operations across diverse application domains Readers will discover a rich tapestry of methodologies tailored for engineers and analysts Deeply rooted in mathematical modeling these approaches are complemented by human judgment and participation Fundamental attributes of these methods include the evaluation of alternatives benchmarking against criteria assigning scores based on varying requirements and assigning weights to denote the significance of individual criteria vis vis others The book embarks on a structured journey commencing with a comprehensive review of evolving decision making methodologies in project and operations management enriched by metadata analysis Subsequent chapters are meticulously organized each spotlighting a distinct approach Topics span foundational concepts in decision making the nuances of performance metrics in the digital age and the implications of emerging technologies on operations management Targeted towards professionals and researchers immersed in project and operations management this work will also immensely benefit postgraduate and undergraduate students in related fields Moreover its relevance extends to professionals across diverse sectors from oil and gas marine and offshore and renewable energies to chemical complexes manufacturing and healthcare systems

Nursing Case Management Elaine Cohen, Toni G. Cesta, 2004-08-26 This classic resource offers complete coverage of

nursing case management from theoretical background and historical perspective to practical applications and how the field is changing to meet the challenges of today's health care environment. It focuses on the implementation of various case management models used throughout the United States and abroad. Key topics include the impact of public policy on health care, understanding the effects of health care reimbursement and its application at the patient level, throughput and capacity management, the impact of the revenue cycle, compliance and regulatory issues, and principles needed to improve case manager/client interaction. This helpful resource is designed to help nurse case managers assess their organization's readiness for case management, prepare and implement a plan to achieve necessary improvements, and evaluate the plan's success. Includes numerous proven case management models currently being used in institutions across the country. Organized to take the nursing case manager on a journey from the historical development of nursing case management to the successful implementation of a case management program. Offers detailed guidance for planning, implementing, and evaluating a case management program. Outlines the planning process with information on key topics such as analysis of the organization, the role of the organization's members, selection criteria for new case managers, case management education, credentialing, and partnerships. Features guidelines for implementing a case management program with information on ethical issues, technology, compliance, and regulatory issues. Addresses the evaluation component of developing and implementing a case management program by presenting information on outcomes, research, documentation, continuous quality improvement, measuring cost effectiveness, care continuum, and evidence-based practice. Presents acute care and community-based models of case management. Highlights the evolution of collaborative models of case management, addressing key elements of joint decision making, shared accountability, and interdisciplinary systems of care. Addresses health care delivery through case management and public policy by presenting current legislative issues and their affect on both health care reimbursement and the application of care at the patient level. Presents the insights, experiences, and advice of nursing administrators who have researched and successfully implemented nursing case management programs in various facilities.

Instructor's Manual to Accompany Management, a Programmed Approach with Cases and Applications Leonard J. Kazmier, 1980 North Carolina Coastal Management Program, 1978 **Handbook of Critical Issues in Goal Programming** C. Romero, 2014-06-28 Goal Programming GP is perhaps the oldest and most widely used approach within the Multiple Criteria Decision Making MCDM paradigm. GP combines the logic of optimisation in mathematical programming with the decision maker's desire to satisfy several goals. The primary purpose of this book is to identify the critical issues in GP and to demonstrate different procedures capable of avoiding or mitigating the inherent pitfalls associated with these issues. The outcome of a search of the literature shows many instances where GP models produced misleading or even erroneous results simply because of a careless formulation of the problem. Rather than being in itself a textbook, Critical Issues in Goal Programming is designed to complement existing textbooks. It will be useful to

students and researchers with a basic knowledge of GP as well as to those interested in building GP models which analyse real decision problems *Sustainable Procurement in Supply Chain Operations* Sachin K.
