Barthès, Junzhou Luo, 2008-12-18 Design of complex artifacts and systems requires the cooperation of multidisciplinary design teams using multiple sophisticated commercial and non commercial engineering tools such as CAD tools modeling simulation and optimization software engineering databases and knowledge based systems Individuals or individual groups of multidisciplinary design teams usually work in parallel and independently with various engineering tools which are located on different sites often for quite a long period of time At any moment individual members may be working on different versions of a design or viewing the design from various perspectives at different levels of details In order to meet these requirements it is necessary to have efficient computer supported collaborative design systems These systems should not only automate individual tasks in the manner of traditional computer aided engineering tools but also enable individual members to share information collaborate and coordinate their activities within the context of a design project Based on close international collaboration between the University of Technology of Compiègne in France and the Institute of Computing Technology of the Chinese Academy of Sciences in the early 1990s a series of international workshops on CSCW in Design started in 1996 In order to facilitate the organization of these workshops an International Working Group on CSCW in Design CSCWD was established and an International Steering Committee was formed in 1998 The series was converted to international conferences in 2000 building on the success of the four previous workshops      *8 C++ Mini Projects for Code Blocks IDE* Udayakumar G.
