Computer-Aided Engineering of Food Processing Systems R.P. Singh, Augusto G. Medina, 2012-12-06 Food properties whether they concern the physical thermodynamic chemical nutritional or sensory characteristics of foods play an important role in food processing In our quest to gain a mechanistic understanding of changes occurring during food processing the knowledge of food properties is essential Quantitative information on the food properties is necessary in the design and operation of food processing equipment Foods because of their biological nature and variability vary in the magnitude of their properties The variation in properties offer a challenge both in their measurement and use in the food processing applications Often a high level of precision in measurement of properties is not possible as the measurement method may itself cause changes to the product resulting in a variation in the obtained values Recognizing the difficulties in measurement of food properties and the lack of completeness of such information several research programs have been in existence during the last two decades In Europe a multinational effort has been underway since 1978 The first project supported by COST European Cooperation in the Field of Scientific and Technical Research was titled COST 90 The Effect of Processing on the Physical Properties of Foodstuffs This and another project COST 90bis have considerably added to our knowledge of measurement methods and data on a number of physical properties Two publications that summarize the work conducted under 1 2 these projects are Physical Properties of Foods and Physical Properties of Foods CAD82 Alan Pipes, 2017-07-26 CAD82 5th International Conference and Exhibition on Computers in Design Engineering is a collection of conference and review papers related to design engineering The book which is divided into 18 parts covers papers on talking points in Computer Aided Design CAD including micros in the design office drafting systems and introducing CAD into the industry The text presents papers on building design CAD CAM databases education electronics geometric modeling graphics mechanical engineering and structures The book concludes by providing poster sessions that tackle topics such as a formalized methodology in CAD which provides a framework for exploring such design and performance relationships for multi variable multi objective problems a system for computer aided architectural design a technique for automatic interpretation and a system of modeling three dimensional roof forms Design engineers and students taking CAD courses will find this book helpful **Management** , 1984 **ICICKM2012-Proceedings of the 9th International Conference on**
