## **Managing Decline Japans Coal Industry:**

Managing Decline Suzanne Culter, 1999-05-01 Industrial restructuring has become a way of life the inevitable accommodation to rapid changes in technology to a global economy that affects large and small communities through the constant flow of goods and people and to the challenging patterns of economic viability that alter that flow Managing Decline examines the impact of coal mine closures in Yubari City Hokkaido once one of Japan s most prosperous coal producing cities and asks how Japanese culture has influenced the enactment of and response to industrial policy for restructuring in this community For many years coal formed the backbone of Japan s economic development but the dangers and costs of mining became increasingly expensive for the industry and government Global changes in coal production and exchange finally prompted Japan s decision in 1986 to shut down nearly all domestic coal mines in favor of coal imports Japan s policy for industry restructuring has been applauded as one of the most comprehensive in addressing the needs of the industry the workers and the community At the micro level however the people in the community most affected by the policy decisions have been excluded from the process Managing Decline reveals the stratified effects as well as compensation for the different groups in Yubari Although the policy settlement package goes to the coal miners community redevelopment ignores their needs prompting them to leave the city and benefiting instead land owners and public employees Revealed as well as the ways in which Japan s cultural values particularly the vertical social structure as it affects decision making status occupations and company organization and the importance of maintaining the family system figure in the policy process and its consequences The author s research based on two years residence in Yubari during the last few years of the closures makes an important contribution to community studies of social change in Japan It is also the first field study to examine the effects of industrial policy for restructuring in Japan at the worker and community level

**Race for the Exits** Leonard J. Schoppa, 2011-07-15 Contrary to all expectations Japan's long term recession has provoked no sustained political movement to replace the nation's malfunctioning economic structure The country's basic social contract has so far proved resistant to reform even in the face of persistently adverse conditions In *Race for the Exits* Leonard J Schoppa explains why it has endured and how long it can last The postwar Japanese system of convoy capitalism traded lifetime employment for male workers against government support for industry and the private female provision of care for children and the elderly Two social groups bore a particularly heavy burden in providing for the social protection of the weak and dependent large firms

which committed to keeping their core workforce on the payroll even in slow times and women who stayed home to care for their homes and families Using the exit voice framework made famous by Albert Hirschman Schoppa argues that both groups have chosen exit rather than voice depriving the political process of the energy needed to propel necessary reforms in the system Instead of fighting for reform firms slowly shift jobs overseas and many women abandon hopes of accommodating both family and career Over time however these trends have placed growing economic and demographic pressures on the social contract As industries reduce their domestic operations the Japanese economy is further diminished Japan has also experienced a baby bust as women opt out of motherhood Schoppa suggests that a radical break with the Japanese social contract of the past is becoming inevitable as the system slowly and quietly unravels Fueling Growth Laura E. Hein, 2020-05-11 This study examines post World War II economic development in Japan through the prism of the energy sector Energy as central to the Japanese economy and still a key problem for Japan is an appropriate angle from which to view the changing economy and the development of economic policy during the Occupation years and beyond **Energy Transitions in Japan and China** Tai Wei Lim, 2016-11-23 This volume focuses on the topic of energy transitions in the coal mining industries of China and Japan by adopting a Sino Japanese comparative approach in area studies to examine the experiences between the two major East Asian economies In China rapid industrialization led to dramatic growth in energy demand and much of this energy demand was fueled by affordable coal energy With growing social concerns about the environment and an increasingly vocal middle class in contemporary China the authorities and state owned enterprises are studying the use of coal fuels for its future development In Japan coal was also an affordable main source of energy for Japan s early post war heavy industrialization until it was gradually replaced by oil in the 1960s The oil shocks of the 1970s compelled Japan to look for cleaner and cheaper fuels including nuclear power In these energy transitions from coal to oil and then onto non fossil fuels the story of coal power in both countries is highlighted in this publication as a comparative study This volume is a crucial contribution to the discussion of China s energy reforms and required reading for scholars of climate change and society *Carbon Technocracy* Victor Seow, 2023-05-10 A forceful reckoning with the relationship between energy and power through the history of what was once East Asia s largest coal mine The coal mining town of Fushun in China s Northeast is home to a monstrous open pit First excavated in the early twentieth century this pit grew like a widening maw over the ensuing decades as various Chinese and Japanese states endeavored to unearth Fushun s purportedly inexhaustible carbon resources Today the depleted mine that remains is a wondrous and terrifying monument to fantasies of a fossil fueled future and the technologies mobilized in attempts to turn those developmentalist dreams into reality In *Carbon Technocracy* Victor Seow uses the remarkable story of the Fushun colliery to chart how the fossil fuel economy emerged in tandem with the rise of the modern technocratic state Taking coal as an essential feedstock of national wealth and power Chinese and Japanese bureaucrats engineers and industrialists deployed new technologies like open pit

mining and hydraulic stowage in pursuit of intensive energy extraction But as much as these mine operators idealized the might of fossil fuel driven machines their extractive efforts nevertheless relied heavily on the human labor that those devices were expected to displace Under the carbon energy regime countless workers here and elsewhere would be subjected to invasive techniques of labor control ever escalating output targets and the dangers of an increasingly exploited earth Although Fushun is no longer the coal capital it once was the pattern of aggressive fossil fueled development that led to its ascent endures As we confront a planetary crisis precipitated by our extravagant consumption of carbon it holds urgent lessons This is a groundbreaking exploration of how the mutual production of energy and power came to define industrial modernity and the wider world that carbon made

**Industrial Heritage and Regional Identities** Christian Wicke, Stefan Berger, Jana Golombek, 2018-04-09 Heritage is not what we see in front of us it is what we make of it in our heads Heritage sites have been connected to a range of identarian projects both spatial and non spatial One of the most common links with heritage has been national identity This book stresses that heritage has developed powerful links to regional and local identities Contributors deal explicitly with regions of heavy industry in different parts of the world exploring non spatial forms of identity including class religious ethnic racial gender and cultural identities In many heritage sites non spatial forms of identity are interlinked with spatial ones Civil society action has been important in representations of regional identities and industrial heritage campaigns Region branding seems to determine the ultimate success of industrial heritage a process that is closely connected to the marketing of regions to provide a viable economic future and attract tourism to the region Selected case studies on coal and steel producing regions in this book provide the first global survey of how regions of heavy industry deal with their industrial heritage and what it means for regional identity and region branding This book draws a range of powerful conclusions about the path dependency of particular forms for post industrial regional identity in former regions of heavy industry It highlights both commonalities and differences in the strategies employed with regard to the regions industrial heritage This book will appeal to lecturers students and scholars in the fields of heritage management industrial studies and cultural geography
