Carbonate Reservoir Characterization: A Geologic-Engineering

Analysis, Part I G.C. Dominguez, F. Samaniego V., 1992-01-17 This book integrates those critical geologic aspects of reservoir formation and occurrence with engineering aspects of reservoirs and presents a comprehensive treatment of the geometry porosity and permeability evolution and producing characteristics of carbonate reservoirs The three major themes discussed are the geometry of carbonate reservoirs and relationship to original depositional facies distributions the origin and types of porosity and permeability systems in carbonate reservoirs and their relationship to post depositional diagenesis the relationship between depositional and diagenetic facies and producing characteristics of carbonate reservoirs and the synergistic geologic engineering approach to the exploitation of carbonate reservoirs The intention of the volume is to fully acquaint professional petroleum geologists and engineers with an integrated geologic and engineering approach to the subject As such it presents a unique critical appraisal of the complex parameters that affect the recovery of hydrocarbon resources from carbonate rocks The book may also be used as a text in petroleum geology and engineering courses at the advanced undergraduate and graduate levels

The Great Ordovician Biodiversification Event B. D. Webby, 2004 Two of the greatest evolutionary events in the history of life on Earth occurred during Early Paleozoic time The first was the Cambrian explosion of skeletonized marine animals about 540 million years ago The second was the Great Ordovician Biodiversification Event which is the focus of this book This is the first book devoted specifically to establishing the global patterns of differentiation of Ordovician biotas through time and space It provides extensive genus and species level diversity data for the many Ordovician fossil groups and presents an evaluation of how each group diversified with assessments of patterns of change and rates of origination and extinction

Taphonomy Ronald E. Martin, 1999-10-28 Taphonomy A Process Approach is the first book to review the entire field of taphonomy or the science of fossil preservation It describes the formation of animal and plant fossils in marine and terrestrial settings and how this affects deciphering the ecology and extinction of past lifeforms and the environments in which they lived The volume emphasises a process approach to taphonomy and reviews the taphonomic behaviour of all important taxa plant and animal It will be useful to anyone interested in the preservation of fossils and the formation of fossil assemblages but it is aimed primarily at advanced students and professionals working in paleontology stratigraphy sedimentology climate modeling and biogeochemistry
