Power and Possibility in Early Arabic Philosophy Nicholas Allan Aubin, 2023-12-31 The world is a finite body and therefore has finite power John Philoponus is remembered for using this Aristotelian premise to break ranks with Aristotle and argue that the world is not everlasting This investigation reconsiders Philoponus s arguments from finite power and then explores the aftermath of this line of thinking in the works of three lesser known Arabic intellectuals active in the generation before Avicenna d 1037 Ab l ayr Ibn Suw r d after 1017 Ab al asan al mir d 992 and Ab Sahl al Mas d after 1025 Each engaged with this dictum in unique and novel ways and in so doing anticipated a number of central features of Avicenna s writings The history of this argument is of crucial importance for understanding the evolution of natural philosophy and metaphysics in this formative period away from tedious and simplistic arguments about creation and towards a more robust modal ontology based on intrinsic and extrinsic necessity

The Archaic Paul Bishop, 2011-09-30 The Archaic

takes as its major reference points C G Jung's classic essay *Archaic Man* 1930 and Ernesto Grassi's paper on *Archaic Theories of History* 1990 Moving beyond the confines of a Jungian framework to include other methodological approaches this book explores the concept of the archaic Defined as meaning old fashioned primitive antiquated the archaic is in fact much more than something very very old it is timeless inasmuch as it is before time itself Arch Urgrund Ungrund primordial darkness eternal nothing are names for something essentially nameless yet whose presence we nevertheless intuit This book focuses on the reception of myth in the tradition of German Idealism or Romanticism Creuzer Schelling Nietzsche which not only looked back to earlier thinkers such as Jacob Boehme but also laid down roots for developments in twentieth century thought Ludwig Klages Martin Heidegger The Archaic also includes studies of the Germanic dimension of the archaic Charles Bambach Alan Cardew a discussion of the mytho phenomenological approach to the archaic Robert Josef Kozljani a series of articles on Jung's understanding of the archaic Paul Bishop Susan Rowland Robert Segal This book will be of interest to psychoanalysts anthropologists and phenomenologists as well as students of psychology cultural studies religious studies and philosophy as it seeks to rehabilitate a concept of demonstrable and urgent relevance for our time **Nanomedicine**

Warren W. Tryon, 2013-11-22 In his treatment of activity measurement in the fields of medicine and psychology Tryon gives us a book that clearly accomplishes the three purposes set out in its preface The reader is definitely encouraged to wrestle with the concepts of behavior and activity in terms of dynamic physical quantities Moreover the reader cannot help but become familiarized with the technology available for performing activity measurements Motivation to use some of this technology is

enhanced by the very extensive summary of other people's uses of it provided throughout the book. Readers may find the book provocative on a number of levels. It is conceptually provocative to those of us struggling with understanding basic issues in the assessment and measurement of behavior. It is practically provocative to those of us working with various forms of behavioral difference especially in clinical populations. The book provokes because it is essentially an unfinished exploration opening us to numerous pathways that when traveled reveal still more paths to explore. In this sense the book should be heuristically useful both in the more traditional empirical sense and in terms of its stimulation of conceptual discussion.

Models of Discovery and Creativity Joke Meheus, Thomas Nickles, 2009-10-08. Since the origin of the modern sciences, our views on discovery and creativity had a remarkable history. Originally, discovery was seen as an integral part of methodology and the logic of discovery as algorithmic or nearly algorithmic. During the nineteenth century, conceptions in line with romanticism led to the famous opposition between the context of discovery and the context of justification, culminating in a view that banned discovery from methodology. The revival of the methodological investigation of discovery, which started some thirty years ago, derived its major impetus from historical and sociological studies of the sciences and from developments within cognitive psychology and artificial intelligence. Today, a large majority of philosophers of science agrees that the classical conception as well as the romantic conception are mistaken. Against the classical conception, it is generally accepted that truly novel discoveries are not the result of simply applying some standardized procedure. Against the romantic conception, it is rejected that discoveries are produced by unstructured flashes of insight. An especially important result of the

contemporary study concerns the availability of descriptive and normative models for explaining discoveries and creative processes Descriptive models mainly aim at explaining the origin of novel products normative models moreover address the question how rational researchers should proceed when confronted with problems for which a standard procedure is missing The present book provides an overview of these models and of the important changes they induced within methodology As appears from several papers the methodological study of discovery and creativity led to profound changes in our conceptions of justification and acceptance of rationality of scientific change and of conceptual change The book contains contributions from both historians and philosophers of science All of them however are methodological in the contemporary sense of the term The central values of this methodology are empirical accurateness clarity and precision and rationality The different contributions realize these values by their interdisciplinary nature Some philosophically oriented papers rely on historical case studies and results from the cognitive sciences others on recent results from the computer sciences and or non standard logics The historically oriented papers address central philosophical questions and hypotheses *Annual Report of the State Board of Agriculture to the Legislature of Kansas* Kansas.
