 other hand the dependency on changing winds presents a serious challenge for short and long term planning collision
 avoidance and boat control Moreover building a robust and seaworthy sailing robot is no simple task leading to a truly
 interdisciplinary engineering problem These proceedings summarize the state of the art as presented at the International
 Robotic Sailing Conference 2011 Following an overview of the history of autonomous sailing a number of recent boat designs
 is presented ranging from small one design boats to vessels built to cross the Atlantic Ocean Subsequently various aspects of
 system design and validation are discussed further highlighting the interdisciplinary nature of the field Finally methods for
