

Causes of Chronic Headaches

1

Overactive Nerve:

Your head-brain messenger (trigeminal nerve) can go haywire, causing pain.

2

Tense Muscles:

Stress, bad posture, and eye strain can knot up your head and neck, leading to headaches.

3

Genetic Link:

Some headaches, like migraines, run in the family.

4

Medication Misstep:

Overusing pain relievers can actually worsen headaches in the long run.

6

Hormonal Rollercoaster:

Fluctuations like those during menstrual cycles, pregnancy, or menopause can trigger headaches.

5

Hidden Medical Issues:

Sinus infections, brain tumors, and even nerve damage can cause persistent pain.

Childhood Headache Ishaq Abu-Arafeh, 2002-01-21 Clinics in Developmental Medicine No 158 Over the past 10 15 years there has been a significant increase in the understanding of migraine and tension headache in children but there is currently no single source of current information for paediatric neurologists and paediatricians In this book an

international team of experts in the headache area addresses that gap and provides an extensive and detailed review of the recent findings in migraine and tension headache as well as headaches caused by underlying neurological disorders. They give an up to date assessment of the causes of childhood headache and better definitions and criteria for diagnosis pointing the way to important future areas of research. This book with its evidence based plans of management and guidelines for investigations will be essential reading for all clinicians treating headache in children.

Medical Factors and Psychological Disorders Alan S. Bellack, R.L. Morrison, 2012-12-06 Throughout the last decade the field of clinical psychology has expanded dramatically. Clinical psychologists are involved in the treatment and research of a wider range of problems and disorders than they have ever been before. Evidence has been rapidly accumulating regarding the role of psychological variables and stress in the etiology and maintenance of a range of medical and psychiatric disorders. New models of psychotherapy have been developed and refined and the specific efficacy of psychotherapeutic interventions for an increasing number of disorders or subtypes of disorders has been documented. However concurrent with research that demonstrates the impact of psychosomatic factors in various disorders and the efficacy of psychological or psychosocial interventions dramatic progress has been made with regard to the investigation of biological factors that may mediate certain disorders. That physical factors may underlie many instances of psychiatric illness has been repeatedly demonstrated. Also the efficacy of somatic treatments for different disorders or for subtypes of disorders has been reported with increasing methodological rigor.
