Treatment Methods for Early and Advanced Prostate Cancer Roger S. Kirby, Alan Partin, J. Kellogg Parsons, Mark Feneley, 2008-05-01 Prostate cancer is treated in a number of different ways depending on a host of different factors ranging from the severity of the cancer the health of the patient their age and their own personal choice of treatment Whether the choice is open or laparoscopic surgery laser treatment or cryoablation ultimately the options open to **Technical Basis of Radiation Therapy** Seymour H. Levitt, James A. Purdy, Carlos A. Perez, Philip Poortmans, 2012-02-10 This well received book now in its fifth edition is unique in providing a detailed examination of the technological basis of radiation therapy Another unique feature is that the chapters are jointly written by North American and European authors This considerably broadens the book's contents and increases its applicability in daily practice throughout the world The book is divided into two sections The first section covers basic concepts in treatment planning and explains the various approaches to radiation therapy such as intensity modulated radiation therapy tomotherapy stereotactic radiotherapy and high and low dose rate brachytherapy The second discusses in depth the practical clinical applications of the different radiation therapy techniques in a wide range of cancer sites All chapters have been written by leaders in the field This book will serve to instruct and acquaint teachers students and practitioners with the basic technological factors and approaches in radiation therapy **Anticancer Plants: Clinical Trials and Nanotechnology** Mohd Sayeed Akhtar, Mallappa Kumara Swamy, 2018-07-03 Cancer is one of the leading causes of death in human beings Though several synthetic medicines are used to treat cancer they are largely inefficient and unsafe In contrast plants which have been used for medicinal purposes since time immemorial have proved to

be useful in fighting cancer with natural compounds from plants and their derivatives offering safe and effective treatment and management for several types of cancer. Plants such as *Catharanthus roseus*, *Podophyllum peltatum*, *Taxus brevifolia*, *Camptotheca acuminata*, *Andrographis paniculata*, *Crateva nurvala*, *Croton tonkinensis*, *Oplopanax horridus* etc are important source of chemotherapeutic compounds. These plants have proven their value in the treatment of cancer and various other infectious diseases and several common anticancer compounds such as taxol, podophyllotoxins, camptothecin, vinblastine, vincristine, homoharringtonine etc have been isolated and purified from these medicinal plants. Unfortunately many of these anticancer plants have become endangered due to ruthless and irresponsible harvesting practices. Hence there is a need to conserve these species and to propagate them on a large scale using plant tissue culture. Alternatively plant cell tissue and organ culture biotechnology could be adopted to produce these anticancer compounds without the need for cultivation. A better grasp and continuing exploration of these isolated molecules and products could provide a powerful alternative means of reducing cancer risk.

Anticancer Plants Volume 3: Clinical Trials and Nanotechnology provides a timely review of concepts and experimental data on the application of anticancer plants and their compounds in clinical trials and on the use of nanotechnology in cancer therapy.
