**Abstract:** A well-designed and implemented working capital management is expected to contribute positively to the construction of a firm's value. Working capital management involves the relationship between short-term assets of a firm and its short-term liabilities. It is related to short-term finance of business concern, which is a closely related business between profitability and liquidity. Efficient working capital management improves operation of business concern and helps in meeting short-term liquidity. The goal of working capital management is to assure that a firm is able to sustain its operations and has adequate capacity to meet both short-term and upcoming operating expenses. "Working capital" is a financial metric that represents the liquidity available to a business, organization or other entity, including government institutions, inventory, debtors, cash and other existing assets such as loans and advances to third parties. With fixed assets like plants and equipment, working capital is considered to be a part of operating capital. In order to produce up to the given capacity by the firm adequate level of working capital should be maintained and the return on investment in fixed assets should be maximized. Gross working capital is refers to current asset. Net Working capital is calculated as current assets less current liabilities. If the current assets are less than current liabilities, then the entity has a lack of working capital, also called working capital deficit. The lack of working capital is less capacity utilization, less turnover and hence the profit is less. Working capital is more inefficient than the amount required producing up to full capacity, and as a result the profits fall. Working capital Management involves managing inventories, accounts receivable and payable, and cash management of Public Sector Enterprises. The tools used in this study include ratio analysis, trend analysis and percentage method.

**Keyword:** Profitability, Liquidity, Current Assets, Working Capital Management, Ratio Analysis, Central Public Sector Enterprises.

## I. INTRODUCTION

Working Capital is an essential part of the business concern whether big, medium or small, needs finance to carry on its operations and to achieve its target. Every business organization should maintain certain amount of Working Capital for their day-to-day requirements as in order to meet the short-term obligations they need short term finance. In our current economy, finance is defined as the provision of money when it is needed. In fact, finance is so indispensable today that its rightly said to be the lifeblood of an enterprise. Without adequate finance, no venture might possibly fulfill its objectives. The working capital is required to purchase the raw material according to the needs of the business concern. Hence, every business concern maintains certain amount as Working Capital to purchase raw materials, components, spares, etc. A business concern must maintain adequate amount of working capital to make the payment of wages and salaries to labour and employees. Periodical payment facilities motivate employees to perform their work more efficiently. Similarly A business concern has to meet various expenditures regarding the operations at daily basis like fuel, power, office expenses, etc. For all these purposes working capital is required. A business concern that is responsible for providing credit facility to the customer and fulfilling short-term liability. Therefore concern should provide adequate working capital. The term working capital refers to that part of firm's capital which is required for financing short term or current assets such as cash, marketable securities, debtors and inventories funds invested in current assets moves fast and they are being continuously converted in to cash and this cash flows out again in exchange for other current assets. However, all the managers should keep in mind that in the pursuit of their liquidity, they should not lose their original goal of profitability. They should be able to attain the objective of liquidity and profitability while managing their working capital.

A firm needs to maintain balance between liquidity and profitability during day-to-day operations. Liquidity means to ensure that the firm is able to meet its short-term obligations and its continuous flow can be guaranteed from a profitable venture. In this process, an asset-liability may be mismatched, which may increase the firm's profitability in the short term, but at the risk of its bankruptcy. On the other hand, a lot of focus on liquidity will be at the expense of profitability. Thus, the manager of a business entity is in a dilemma of achieving desired tradeoff between liquidity and profitability in order to maximize the value of a firm.

Working capital management includes working capital financing apart from managing the current assets and liabilities. That adds the responsibility for arranging the working capital at the lowest possible cost and utilizing the capital cost-effectively. Working capital
