Management Of World Fisheries Implications Of Extended Coastal State Jurisdiction:

Management of World Fisheries World Fisheries Project, 1989 Proceedings of a workshop held by the World Fisheries Project at the U of Washington Seattle in July 1985 The analysis is guided by two overarching questions What impact is extended coastal state jurisdiction having on fisheries management and development How can extended jurisdiction be employed *The International Regime of Fisheries* José A. Yturriaga, 2021-09-27 Until recently the international community failed to adopt either an agreed limit for the breadth of the territorial sea or a satisfactory regime of fisheries in the waters adjacent to the territorial sea This provoked an eruption of unilateral acts by which coastal states extended their jurisdiction towards the high seas The Third U N Conference on the Law of the Sea accepted the establishment of a 12 mile territorial sea and a 200 mile exclusive economic zone While taking into account the non existent rights and interests of the so called geographically disadvantaged states and of states with broad continental shelves the 1982 Convention on the Law of the Sea practically ignored existing rights and interests of habitual fishing states It maintained the well established principle of freedom of fishing on the high seas but with specific conditions Dissatisfied with the Convention s regulation of fishing on the high seas a few states elected to hold a U N Conference on Straddling and Highly Migratory Fish Stocks which adopted the 1995 Agreement for the implementation of the provisions of the Convention relating to the conservation and management of such stocks Similarly some of these states like Chile Argentina and Canada adopted legislation extending their jurisdiction beyond their respective 200 mile fishing or exclusive economic zones This book explores these events in the historical development of the international regulations of fisheries and concludes with a look into recent developments in the area

Institutions for Living Marine Resources Syma A. Ebbin, Alf H. Hoel, Are Sydnnes, 2005-01-07 This is the first systematic assessment of the international 200 mile exclusive economic zone To date 145 states have ratified the Law of the Sea Convention and most have established EEZs This volume focuses on the specific nature of the EEZ and the construction and evolution of institutions stemming from its introduction specifically examining developments at local national and international levels **Quotas in International Environmental Agreements** Amanda Wolf, 2014-04-23 Quotas have been used in international environmental agreements for at least a century and in tandem with incentive approaches should

continue to be crucial to realizing a sustainable environment This text is a critical examination of quotas both as regulatory tools and as products of negotiation It reviews the main features of environmental problems the regulatory options and criteria used to judge them and the various ways of explaining negotiated outcomes Quotas in the management of fisheries other resources freshwater and marine pollution and air pollution are also described Selected examples are considered in detail to provide an understanding of how quotas were developed in scientific political economic and social context An assessment of the key features of quotas in practice leads to the identification of an emerging approach the negotiation of constrained local quotas The approach is a practical way to balance efficiency and fairness in complex negotiations without sacrificing environmental effectiveness

Conservation on the High Seas Simone Borg, 2012-01-01 This book from Simone Borg is a much needed and highly recommended study on conservation on the high seas and harmonizing international regimes for the sustainable use of living resources This publication is very topical considering the continuous over exploitation of the living resources It is a very exhaustive study of many international instruments the most importantly the 1982 The United Nations Law of the Sea Convention The author in an admirable manner linked the issue of the conservation of living resources on the high seas to the fundamental principles underlying modern environmental law such as the precautionary principle The unique feature which sets this book apart from the other similar publications is that it is firmly entrenched in general international law i e deals in a very erudite manner with the issues of fragmentation and harmonisation of international law in the context of conservation This book will appeal not only to the experts on the law of the sea but also to general international lawyers _ Malgosia Fitzmaurice Queen Mary University of London UK This is an excellent book which has taken apart a very complicated part of international law and reassembled it in a manner which is up to date accessible insightful and coherent In doing so this work plugs a gap in the scholarship in this area for which the author is to be truly commended It is an essential addition for all practitioners scholars and students who work or study in one of the foremost environmental challenges of the 21st century conservation on the high seas _ Alexander Gillespie University of Waikato New Zealand The conservation of living marine resources with diverse characteristics and life styles has become an international concern Borg s book provides an examination of the regulatory and legal implications of marine conservation The analysis takes account of UNCLOS Treaties and the UNCED 1992 that aid a more holistic response by States towards conservation the marine environment and socio economic needs Despite shortcomings and failures there have been success stories that highlight the potential of effective interaction between fisheries law and environmental law The book addresses the legal aspects of international regimes aimed at setting conservation obligations compliance and enforcement This is a path breaking work that shows how international law can diversify itself into different legal streams to ensure flexibility and a degree of adaptation to the different interests of the States involved _ John McEldowney University of Warwick UK This timely book discusses various international norms that qualify the right which all states have to access and

exploit living resources in marine areas beyond national jurisdiction in order to promote the conservation of such species. An intricate body of norms has accumulated over the last few decades consisting of prior and subsequent rules addressing the same issues as well as a number of specialized rules that supplement more general ones. However, this process has also exposed the fragmentation of the relevant international regimes with evolving and diverse interpretations of the same legal terms, fine tuning or qualifying earlier treaties. Uncertainty prevails as to how these norms interrelate with each other. The book assesses to what extent the harmonization of these international regimes is possible. It highlights current trends and developments which aim at better coherence and discusses legal techniques that could serve to harmonize both the objectives of these international norms and their scope of applicability. The author also demonstrates that in some cases gaps and conflicts in the existing legal framework cannot be simply interpreted away but require the further development of international law in order to be resolved properly. This unique book will appeal to academics and students in international law especially those researching marine conservation and the applicable legal framework. It will be equally useful to organizations both public and private with an interest in marine conservation beyond national jurisdiction. Environmental groups and policy makers in maritime affairs, environmental issues and fisheries management will also find much to interest them in this insightful book.

Property Rights and Natural Resources Richard Barnes, 2009-04-22. Winner of the SLS Peter Birks Prize for Outstanding Legal Scholarship 2009. The use of private property rights to regulate natural resources is a controversial topic because it touches upon two critical issues: the allocation of wealth in society and the conservation and management of limited resources. This book explores the extension of private property rights and market mechanisms to natural resources in international areas from a legal perspective. It uses marine fisheries to illustrate the issues that can arise in the design of regulatory regimes for natural resources. If property rights are used to regulate natural resources then it is essential that we understand how the law and values embedded within legal systems shape the development and operation of property rights in practice. The author constructs a version of property that articulates both the private and public function of property. This restores some much needed balance to property discourse. He also assesses the impact of international law on the use of property rights, a much neglected topic, and shows how different legal and socio-political values that inhere in different legal regimes fundamentally shape the construction of property rights. Despite the many claimed benefits to be had from the use of private property rights based management systems, the author warns against an uncritical acceptance of this approach and in particular questions whether private property rights are the most suitable and effective arrangement of regulating natural resources. He suggests that much more complex forms of holding, such as stewardship, may be required to meet physical, legal and moral imperatives associated with natural resources.

The Exploited Seas International Maritime Economic History Association, 2001. The book combines the approaches of maritime history and ecological science to explore the evolution of life forms and eco systems in the ocean from a historical perspective in order to establish and

develop the sub discipline of marine environmental history Documentary records relating to the human activity such as fishing plus naturally occurring paleo ecological data are analysed in order to determine the structure and function of exploited ecosystems The book is divided into four chapter groups the first concerned with Newfoundland and Grand Banks fisheries the second with the potential of historical sources to provide a history of marine animal populations the third explores the development of fisheries in the southern hemisphere during the twentieth century and the final section explores the limitations of data and existing analysis of whale populations The epilogue reiterates the suggestion that collaboration between historians and biologists is the key to furthering the sub discipline

Managing the Commons, Second Edition John A. Baden, Douglas S. Noonan, 1998-04-22

Noonan, 2017-08-15 Managing natural resources that are held in common is a great and grave challenge. It requires addressing the community of users beneficiaries and managers. It also requires consideration of how those communities interact with the commons itself. At stake is the prosperity and even survival of both the people and the environment. Understanding and improving how we relate to commons has been the focus of much scholarly and practical research in the last 30 years. A quick look at the various natural resource commons surrounding us indicates that this will no doubt continue. Pacific Northwest salmon fisheries represent a system of commons both complex and illustrative. My past history as administrator of the US Environmental Protection Agency and my fisherman's interest in salmon has heightened my sensitivity to the plight of the salmon and the people whose lives they affect. Recently my wife and I moved back to the Pacific Northwest something the salmon try to do every year as they live out their inspiring life cycles. Unlike us the salmon do not always find a hospitable environment when they return. There are many reasons. Simply put there are more people in the salmon's way and they struggle more with the problems that come with expanding human populations. A number of reports issued over the past few years have chronicled the broad declines and local extinction of many salmon steelhead and sea run cutthroat stocks in the region. The people who fish for a living and the communities in which they live have been hit hard. Our resource agencies are in danger of being overwhelmed by the complexity and magnitude of the problem. Why are salmon faring so poorly? Who is responsible? What can be done to reverse the recent declines in salmon populations? When tragedy befalls a commons as it has the salmon I come to no conclusion about who is at fault and I don't intend to. The one thing that I am certain of is that the only truly innocent parties in all of this are the salmon and the generations of people yet to come. It seems to me that the responsibility falls upon all of us fishermen resource managers and concerned citizens alike.

to take the steps necessary to ensure that salmon populations recover to the point that our children will be able to enjoy the quality of life we once took for granted While many people focus on how to get the most from commons groups like the Sustainable Fisheries Foundation emphasize providing and maintaining those natural resources Their goal is deceptively simple We are trying to put more salmon back in the rivers and lakes of the Pacific Northwest Determining exactly how to accomplish this goal has defied the efforts of a great many dedicated and talented people Many papers and panel discussions especially reports on the status and trend of wild salmon populations in the North Pacific make it clear that many salmon stocks in parts of the lower United States southern British Columbia and the west coast of Vancouver Island are not faring well The decline in salmon numbers in these areas corresponds with a rapidly expanding human population alterations in land and water use increasing sediment and containment loads and heavy fishing pressure by a combination of sport commercial and tribal groups

Non-Flag State Enforcement in High Seas Fisheries Rosemary Gail Rayfuse, 2004-01-01 This book is the first comprehensive examination of state practice relating to enforcement by non flag states of the high seas conservation and management measures adopted by Regional Fisheries Organisations It demonstrates that an exception is emerging in customary international law to the rule of the primacy of flag state jurisdiction in the high seas fisheries context

The Rules of the Game in the Global Economy Lee E. Preston, Duane Windsor, 2013-11-11 This study has been long in the making and the world has changed dramatically while we have been at work We initially anticipated a substantial section on the Soviet dominated Council for Mutual Economic Assistance CMEA or COMECON which offered an interesting contrast to the kind of international business regime typically found among market oriented countries and industries As we moved toward publication the CMEA vanished and so we mention it only in passing The USSR subsequently disintegrated into a Commonwealth of Independent States CIS On the other hand we began with the assumption that the historic rule of capture no longer played a significant role in international economic relations The seizure of Kuwait's territory and wealth by the government of Iraq suggests that this assumption was heavily influenced by wishful thinking Even though this seizure has been reversed by military action the experience remains a challenge to generally held beliefs about the strength of order versus chaos in contemporary international affairs Some readers of this volume have suggested that it gives insufficient attention to the fact that many of the important business and economic regimes of the postwar period are currently under significant pressure perhaps even in danger of collapse We acknowledge that there are many evidences of strain in for example the free trade and money exchange regimes and in many areas of environmental protection
