The Future of Emergency Management after 2020 Robert McCreight, Curry Mayer, 2021-12-17. 2020 was a year unlike any other in U.S. history. Emergency managers were confronted with a rapidly evolving deadly virus coupled with widespread economic devastation. On top of increasingly destructive hurricanes and other extreme weather as well as ongoing drought and wildfires, there was societal upheaval. All of these crises created a witch's brew of challenges for public safety and emergency management in the middle of 2020 that continues today. For emergency managers in 2020, better strategies were needed to overcome these major crises and disasters that triggered instability and upended normal life. Mega disasters and cascading catastrophes now must be imagined and managed for effectively. *The Future of Emergency Management After 2020: The New Normal and Nasty* looks at this new normal and at the issues that alter the scope, complexity and priorities of emergency management. It references the last ten years where the tragedy of 9/11 redefined priorities in the field. Drawing on the authors' extensive experience while canvassing the opinions of other emergency management professionals, this thought-provoking book offers new strategies for the crises we're now seeing and the novel crises we might see in the future. Faculty, students and practitioners of emergency management will find this book extremely pertinent and valuable.

Handbook of Sustainability Science in the Future Walter Leal Filho, Anabela Marisa Azul, Federica Doni, Amanda Lange Salvia, 2023-08-14. Humanity will have to cope with many problems in the coming decades; for instance, the world population is likely to grow to 8.8 billion people by 2035. Also, changing climate conditions are negatively affecting the livelihoods of millions of people. In particular, environmental disasters are causing substantial damages to properties. From a social perspective, the inequalities between rich and poor nations are becoming even deeper, and in many countries, conflicts between national and international interest groups are intensifying. The above state of affairs suggests that a broader understanding of the trends which may lead to a more sustainable world is needed, especially those which may pave the way for future developments. In other words, we need to pave the way for sustainable futures. Consistent with this reality, the proposed Encyclopedia of Sustainability Futures aims to identify, document, and disseminate ideas, experiences, and visions from scientists, members of nongovernmental organisations, decision makers, industry representatives, and citizens on themes and issues which will be important in pursuing sustainable future scenarios. In particular, the publication will focus on scientific aspects as well as on social and economic ones, also considering matters related to financing and infrastructure which are important in pursuing a sustainable future. The Encyclopedia of Sustainability Futures will involve the contributing authors in line with the principle of co-generation from across a wide range of disciplines, e.g., education and social sciences, natural sciences, engineering, the arts, languages, etc., with papers adopting a long-term sustainability perspective with a time horizon until 2050. The focus will be on themes which are felt as important in the future, and the chapters are expected to interest and motivate a world audience. This book is part of the 100 papers to accelerate the implementation of the UN Sustainable Development Goals initiative.
