Anna-Lena Lamprecht, Tiziana Margaria, 2014-09-19 This book presents an agile and model driven approach to manage scientific workflows. The approach is based on the Extreme Model Driven Design XMDD paradigm and aims at simplifying and automating the complex data analysis processes carried out by scientists in their day to day work. Besides documenting the impact the workflow modeling might have on the work of natural scientists, this book serves three major purposes:

- 1 It acts as a primer for practitioners who are interested to learn how to think in terms of services and workflows when facing domain specific scientific processes.
- 2 It provides interesting material for readers already familiar with this kind of tools because it introduces systematically both the technologies used in each case study and the basic concepts behind them.
- 3 As the addressed thematic field becomes increasingly relevant for lectures in both computer science and experimental sciences, it also provides helpful material for teachers that plan similar courses.
