**The Political Economy of Natural Resources and Development** Paul A. Haslam, Pablo Heidrich, 2016-02-05

The Political Economy of Resources and Development offers a unique and multidisciplinary perspective on how the commodity boom of the mid 2000s reshaped the model of development throughout Latin America and elsewhere in the developing world Governments increased taxes and royalties on the resource sector the nationalization of foreign firms returned to the mainstream economic policy agenda and public spending on social and developmental goals surged These trends often described as resource nationalism have developed into a strategy for economic development generated a re imagining of the state and its institutional possibilities and created a new but very significant political risk for extractive enterprises However these innovations which constitute the most dramatic change in development policy in Latin America since the advent of neoliberalism have so far received little attention from either academic or policy oriented publications This book explores the reasons behind these policies and their effects on states firms and development trajectories This text brings together renowned thematic experts to examine the political economic causes of resource nationalism as well as its manifestation in six Latin American countries The causal variables considered by the contributors to this collection include a

range of political economic determinants of policy including commodity prices the influence of ideology and national politics ideas about industrial policy relations between host governments and investors and how countries respond to opportunities provided by regional initiatives and the new geography of the global economy This volume is essential reading in development economics political economy and Latin American studies as well as for those who want to understand what economic development means after neoliberalism

**Evolution from a Thermodynamic Perspective** Carl F Jordan, 2021-11-26. Survival of the fittest is a tautology because those that are fit are the ones that survive but to survive a species must be fit. Modern evolutionary theory avoids the problem by defining fitness as reproductive success but the complexity of life that we see today could not have evolved based on selection that favors only reproductive ability. There is nothing inherent in reproductive success alone that could result in higher forms of life. *Evolution from a Thermodynamic Perspective* presents a non circular definition of fitness and a thermodynamic definition of evolution. Fitness means maximization of power output necessary to survive in a competitive world. Evolution is the storage of entropy. Entropy storage means that solar energy instead of dissipating as heat in the Earth is stored in the structure of living organisms and ecosystems. Part one explains this in terms comprehensible to a scientific audience beyond biophysicists and ecosystem modelers. Part two applies thermodynamic theory in non esoteric language to sustainability of agriculture and to conservation of endangered species. While natural systems are stabilized by feedback, agricultural systems remain in a mode of perpetual growth pressured by balance of trade and by a swelling population. The constraints imposed by thermodynamic laws are being increasingly felt as economic expansion destabilizes resource systems on which expansion depends.

*Timber Booms and Institutional Breakdown in Southeast Asia* Michael L. Ross, 2001-01-08. Scholars have long studied how institutions emerge and become stable. But why do institutions sometimes break down? In this book Michael L. Ross explores the breakdown of the institutions that govern natural resource exports in developing states. He shows that these institutions often break down when states receive positive trade shocks, unanticipated windfalls. Drawing on the theory of rent seeking, he suggests that these institutions succumb to a problem he calls rent seizing: the predatory behavior of politicians who seek to supply rent to others and who purposefully dismantle institutions that restrain them. Using case studies of timber booms in Indonesia, Malaysia and the Philippines, he shows how windfalls tend

to trigger rent seizing activities that may have disastrous consequences for state institutions and for the government of natural resources More generally he shows how institutions can collapse when they have become endogenous to any rent seeking process     Rural Development Strategies for Poverty Reduction and Environmental Protection in Sub-Saharan Africa Kevin M.
