Managing Disaster Risk in Emerging Economies Alcira Kreimer, Margaret Arnold, 2000-01-01 In 1999 natural catastrophes and man made disasters claimed more than 105 000 lives 95 percent of them in the developing world and caused economic losses of around US 100 billion In 1998 the twin disasters of the Yangtze and Hurricane Mitch accounted for two thirds of the US 65 billion loss The geographical areas affected may vary but one constant is that the per capita burden of catastrophic losses is dramatically higher in developing countries To respond to an increased demand to assist disaster recovery programmes the World Bank set up the Disaster Management Facility in 1998 to help provide the Bank with a more rapid and strategic response to disaster emergencies The DMF focuses on risk identification risk reduction and risk sharing transfer the three major topics in this volume The DMF also promotes strategic alliances with key private government multilateral and nongovernmental organisations to ensure the inclusion of disaster risk reduction as a central value of development The most important of these partnerships is the ProVention Consortium launched in February 2000 based on the premise that we must all take responsibility for making the new millennium a safer one Managing Disaster Risk in Mexico Alcira Kreimer, 1999-01-01 Disaster Risk Management Series Since 1980 Mexico has suffered from 79 disaster events Over half of these disasters were weather related such as hurricanes or flooding One fourth of them were geology related that is volcanic eruptions landslides or earthquakes The rest of them were instigated by humans in the form of industrial accidents chemical and oil spills explosions and structural fires Mexico was chosen for the first appraisal mission due to its experience with natural disaster losses and because it is considering significant public policy changes in the realm of insurance regulations The World Bank established the Disaster Management Facility in July 1999 to provide proactive leadership in coordinating efforts to introduce disaster prevention and mitigation practices in development related activities This report synthesizes the findings of a World Bank mission to Mexico on disaster management mitigation and financing which was followed up by a workshop to discuss those findings The scope of this study is quite broad and examines the following issues Mexico's experience with disasters of all kinds how risk and vulnerability are assessed and can be assessed as a means toward greater mitigation that is better planning and construction standards disaster mitigation in practice the specific contribution that the insurance industry can make to disaster mitigation in Mexico and why this industry is so underutilized at present and the government's role in risk transfer as a way of enhancing mitigation especially through the operation of its Natural Disaster Fund FONDEN Approaches to Managing Disaster John Tiefenbacher, 2012-03-14 Approaches to Managing Disaster Assessing Hazards Emergencies and Disaster Impacts demonstrates the array of information that is critical for improving disaster management The book reflects major management components of the disaster continuum the nature of risk hazard vulnerability planning response and adaptation in the context of threats that derive from both nature and technology The chapters include a selection of original research reports by an array of

Managing People in Disasters ,2000 *Managing Urbanization, Climate*

Change and Disasters in South Asia Ravindra Kumar Srivastava, 2020-07-20 This book offers essential insights into potential catastrophic events that might befall upon the emerging urban landscape in South Asia and which are due to hazards risks and vulnerabilities inherent in the region's geophysical location as well as due to climate change and unplanned urbanization. It highlights major physiographic demographic geological and geophysical indicators that are responsible for changing the pattern and trend of urbanization in South Asia, a crucial issue in view of emerging threats of climate change and changes in the demographic profile. The book addresses the disaster management scenario in South Asia, manifestations of climate change in the region and various urban setups under climate change induced risks. Further, it elaborates on the challenges of urbanization based on risks and vulnerabilities which manifest in the form of slum area growth, piling and littering of waste and filth, new health risks, groundwater contamination, air pollution, highly energy dependent lifestyles, poverty, socio-economic tensions, etc. It also critically examines the institutional mechanisms for disaster risk reduction (DRR), climate change adaptation (CCA) and urban governance and suggests appropriate changes in the governing structure to mitigate these risks. The book draws the attention of urban planners and policymakers to current shortcomings in the administrative and financial structures of local urban bodies. While outlining climate associated risks and adaptation strategies in South Asia, it also suggests measures for integrating climate change and urban adaptation with state's planning processes and puts forward a risk alleviation platform to bring the risk managers working in different fields together so that they make concerted efforts to achieve sustainable development. It offers valuable takeaways for researchers, urban planners, those working in industry, consultants and policymakers.

Disaster Management Pradeep K. Goyal, Anil K. Gupta, 2025-06-01 **Disaster and Crisis Management** Naim Kapucu, Arjen Boin, 2017-10-02 A wide range of natural hazards pose major risks to the lives and livelihoods of large populations around the world. Man-made disasters caused by technological failures, industrial accidents, spillages, explosions and fires compound this threat. Since 9/11, security threats based on violence, terrorism, insurgency and civil strife have attracted much governmental attention and a great deal of public resources. As the scale, frequency and intensity of disasters and crises have dramatically increased over the last decade, the failures in responding to these crises have prompted a critical need to evaluate the way in which the public sector responds to disaster. What have we learned? What has changed in the management of disasters and crises? What do we know about the causes, patterns and consequences of these events? This book looks at some of the approaches that can be taken to empirically examine disaster and crisis management practices. It contributes to the literature on crisis and disaster management as well as social policy and planning. Introducing approaches that are applicable to a variety of circumstances in the U.S. and in other countries, it offers ways to think through policy interventions and governance mechanisms that may enhance societal resilience. This book was originally published as a special issue of *Public Management Review*. **OECD Reviews of Risk Management Policies Boosting Disaster Prevention through Innovative Risk Governance: Insights from Austria, France and Switzerland**
