Lipsett,2014-07-23 The creation of the World Commission on Environment and Development WCED commonly known as the Brundtland Commission and the publication in 1987 of its report Our Common Future marked a turning point towards finding the balance among society economy and environment Since then governments have improved regulations new standards have been developed management and process practices have addressed potential gaps public and private organisations have taken initiative through the creation of committees and programs and research covering all areas of sustainable development has become a priority for academics and practitioners These different sources serve as the basis for a pre selection process of sustainable development indicators SDIs While some sources do not specifically address certain industries the pre selection process suggested in this book studies and analyses each SDI s resource and the possible applicability of already identified indicators An assertive set of SDIs is not solely based on regulatory systems as measuring sustainability cannot become a bureaucratic process and neither can any other SDI s source single handedly determine or

mandate the final set of indicators as the real objective is to assist decision makers and effectively engage stakeholders This book presents an analysis of six different sources for pre selecting SDIs accompanied by a methodology to then finalise with a set of SDIs for the surface mining operations in oil sands projects Surface mining projects are complex operations with several social economic environmental and health impacts As the government and oil sands developers are turning towards increasing productivity with a more conscious sustainable development approach a pre selection of SDIs is required to assist further formal multi criteria selection processes

Quaternary of the Trent David R. Bridgland, Andy Howard, Mark J. White, Tom S. White, 2014-03-31 This volume is an integrated overview and synthesis of available data relating to the Quaternary evolution of the River Trent It provides detailed descriptions of the Pleistocene sedimentary records from the Trent its tributaries and related drainage systems a sedimentary record that spans a period of approximately half a million years and the biostratigraphical and archaeological material preserved therein Significant new data are presented from recently discovered sites of geological and archaeological importance including previously unrecognised fluvial deposits as well as novel analyses such as mathematical modelling of fluvial incision as recorded by the river terrace deposits In combination with a thorough review of the literature on the Trent these new data have contributed to revised chronostratigraphical and palaeogeographical frameworks for central England and revealed the complexity of the Pleistocene fluvial and glacial records in this region The fragmentary Trent terrace sequence is an important element of wider reconstructions of Pleistocene palaeodrainage in Britain providing a link between the records preserved in the English Midlands and those in East Anglia
