Their Relatives II Jeffrey C. Carrier, John A. Musick, Michael R. Heithaus, 2010-03-09 Since the award winning first volume The Biology of Sharks and Their Relatives published in 2004 the field has witnessed tremendous developments in research rapid advances in technology and the emergence of new investigators beginning to explore issues of biodiversity distribution physiology and ecology in ways that eluded more traditional **Sharks: Conservation, Governance and Management**

Erika J. Techera, Natalie Klein, 2014-06-05 The key aim of this book is to explore the global conservation and management of sharks There has been a rapid decline in populations of many shark species while new science has emerged of the critical role they play in marine ecosystems However the authors show that conservation law and policy have been slow to develop with only a small number of iconic species being protected worldwide The increase in fishing impact primarily through shark finning and by catch has led to shark conservation receiving greater international attention in recent years The book explores our current knowledge and status of the law and science in relation to sharks with a particular focus on improving frameworks for their conservation and management Recent trends are analysed including shark finning bans that have been put in place in several countries the widening number of nations establishing shark sanctuaries and the growth of shark based tourism The efficacy of current listing processes for endangered species and fisheries regulations is also examined Tourism is explored as an alternative to fishing and the risks and impacts associated with this industry are analysed Contributors include leading authorities from universities and conservation organizations in North America Europe and Australia A common theme is to emphasise the importance of collaborative governance between various interest groups and the need for inter disciplinary research and management approaches that are necessary to address the decline in sharks

Animal Adventures: Sharks offers a unique learning experience as you meet wild and exotic animals face to face. Shark Angela Royston, 2013-07-15. Sharks are the top predator in the world's oceans. This colorful book examines the adaptations that have allowed sharks to thrive in Earth's largest habitat. Gorgeous photographs will grab students' attention while vivid text and fact-filled sidebars engage even reluctant readers. Sidebars describe the species that share the ocean with sharks, making this a complete look at the predator-prey relationship in the fascinating ocean habitat.

Sharks in the Arts Vivienne Westbrook, Shaun Collin, Dean Crawford, Mark Nicholls, 2018-05-11. This book is the most thorough exploration to date of the many ways in which a wild creature has been absorbed, reimagined, and represented across the ages in all of the major art forms. The authors consider not only how the identity of sharks in the natural environment became incorporated into a cultural environment but also how sharks came to be considered the most feared creatures in the open oceans as a consequence of this incorporation. Yet sharks are especially important in helping to maintain a balance that is essential to the health of the oceans. The book begins with a treatment of the three sharks at the top of global shark attack files from scientific, economic, and environmental perspectives. Subsequent chapters engage with cultural representations of sharks in poetry, drama, art, novels, screenplay, adaptations, and films. Through an exploration of the ways in which sharks have been represented in human culture through the centuries, this book alerts the global community to the importance of sharks as a common cultural heritage. It aims to change perceptions of sharks so that they can become more revered than feared. The authors of this book argue that an increased understanding of sharks should lead to the development of better strategies for shark and human interactions. This book will be of great interest to researchers and students of the Environmental Humanities, Cultural History, and the Arts. It is also excellent supplementary reading for courses in Zoology and Marine Science.

Field Identification Guide to the Sharks and Rays of the Red Sea and Gulf of Aden Ramón Bonfil, Mohamed Abdallah, Food and Agriculture Organization of the United Nations, 2004-01-01. This volume presents a fully illustrated field guide for the identification of the sharks and rays most relevant to the fisheries of the Red Sea and Gulf of Aden. An extensive literature review and two field surveys in the region were carried out for the preparation of this document. A total of 49 sharks and 45 batoids reliably reported for the region are listed, and those common in the fisheries or likely to be found through fisheries operations are fully treated. The guide includes sections on technical terms and measurements for sharks and batoids and fully illustrated keys to those orders and families that occur in the region. Color plates for a large number of the species are included.
